Foreword

The Statistical Yearbook Bangladesh is a very important regular yearly publication of Bangladesh Bureau of Statistics (BBS). This publication greatly contributes as a source of statistics to policy-makers, researchers, academicians, statisticians and other general users. It can help in meeting data demand to formulate effective and fruitful plan, policy and strategy. It can be regarded as a unique tool that might substantially assist us in meeting emerging issues in several areas of socio-economic sectors. This publication would also be helpful as a data source to monitor Sustainable Development Goals, 8th Five Year Plan, 2nd Perspective Plan, National Social Security Strategy and Bangladesh Delta Plan 2100 etc.

Compiling a large publication like the Statistical Yearbook Bangladesh is a robust and time-consuming task. Despite that, the Bangladesh Bureau of Statistics (BBS) has been able to produce this publication yearly. Surely, references and sources of data in this publication have made an opportunity for stakeholders to make a policy plan as well as project analysis. This yearbook contains a complete set of data in much detailed form which can be useful for enthusiastic researchers and planners.

My sincere thanks to the Director General and his colleagues at BBS for their relentless efforts in bringing out the current edition of this publication. I would also like to convey my heartfelt gratitude to the officials of SID involved in the improvement of the quality of this publication by putting their valuable corrective suggestion. I acknowledge the great contribution of the local bodies, government officials and officials of source agencies who have continuously helped BBS by providing data. I hope that they will continue the same cooperation in future.

I do hope that this publication will be of immense help to concerned public representatives, policy-makers, officials, planners, academicians, researchers, business communities, students and all other data users.

Preface

The Bangladesh Statistical Yearbook 2022 is a compilation of important demographic, socio-economic, and environmental information that provides a comprehensive account of the trends, status, and progress of Bangladesh. It is a regular publication of the Bangladesh Bureau of Statistics (BBS) and the current edition of this publication is the 42nd of its kind. It presents both cross-sectional and time series data to facilitate comprehensive analysis. It gives an overview of the financial year 2021-22 as well as the calendar year 2022. It includes quantitative benchmark data on various areas that can be helpful to monitor implementation status of SDG as well various national plans like 8th Five Year Plan, Perspective Plan, Bangladesh Delta Plan 2100 etc.

The publication consists of 15 chapters with the latest available data on general features and environment, area, population and households, labor and employment, agriculture, industry, energy, transportation and communication, foreign trade, banking and insurances, price and wages, national income, education, health and family planning, consumption, household income and expenditure.

One of the main limitations in timely preparation of this publication is that data produced by other agencies are not always available in time and in suitable form. For timely publication of this yearbook we eagerly seek co-operation of all concerned agencies and stakeholders to ensure us required data in time.

My sincere thanks and gratitude go to the Secretary, Statistics and Informatics Division, for her excellent guidance in bringing out this publication. I also would like to thank Mr. Ziauddin Ahmed, Director, National Accounting Wing, BBS, and his colleagues for their painstaking effort in preparing the manuscript and presenting it in time. The member of the Editors Forum of BBS and the Publication Scrutiny Committee of SID deserve special thanks for their technical integrity and efforts to improve this publication.

I hope readers and users will find this publication a useful addition to their database. Comments and suggestions for improvement of the yearbook always would be highly appreciated.

BANGLADESH: An Overview

Historical Background

The history of Bangladesh is an eventful combination of turmoil and peace, as well as prosperity and destitution. It has thrived under the glow of cultural splendor and suffered under the ravages of war. The territory now constituting Bangladesh was under the Muslim rule over five and a half centuries from 1201 to 1757 A.D. Then it was ruled by the British, after the defeat of the last sovereign ruler of Bengal, Nawab Siraj ud-Daulah, at the Battle of Plassey on the fateful day of June 23, 1757. The British ruled over the entire Indian sub-continent including this territory for nearly 190 years from 1757 to 1947. During that period Bangladesh was a part of the British Indian provinces of Bengal and Assam. With the termination of the British rule in August, 1947 the sub-continent was partitioned into India and Pakistan. Bangladesh then became a part of Pakistan and was named as East Pakistan. It remained so for about 24 years from August 14, 1947 to March 25, 1971. The Independence of Bangladesh from Pakistan was declared on 26 March 1971, which is celebrated as Independence Day. After 9-month long war of liberation Bangladesh swept to victory on 16 December 1971, which is celebrated as Victory Day.

Geographical Location and Area

Bangladesh lies in the north eastern part of South Asia between 20°34' and 26°38' north latitude and 88°01' and 92°41' east longitude. The country is bounded by India on the west-north and north-east while Myanmar on the south-east and the Bay of Bengal on the south. The area of the country is 56,977 sq. miles or 1, 47,570 sq. k.m. The limits of territorial water area of Bangladesh are 12 nautical miles and the area of the high seas extending to 200 nautical miles measured from the base lines constitutes the economic zone of the country. Bangladesh won in Arbitral Tribunal/PCA more than 1, 18,813 square kilometers of waters comprising territorial sea, exclusive economic zone extending out to 200 NM across sizable area, and also has undeniable sovereign rights in the sea bed extending as far as 354 NM from Chattogram coast in the Bay of Bengal with all the living and non-living resources. To achieve an equitable result, the tribunal awarded Bangladesh 19,467sq km of area out of total disputed area of 25,602 sq km (approx).

Physiography

Except the hilly regions in the north-east, south-east and some areas of high land in the northern part, the country consists of plain and fertile land. A network of rivers exists in the country of which the Padma, the Jamuna, the Teesta, the Brahmaputra, the Surma, the Meghna and the Karnaphuli are prominent. All those rivers have 230 tributaries with a total length of about 24140 kilometers. The alluvial soil is thus continuously being enriched by heavy silts deposited by rivers during the rainy season.

Flora and Fauna

According to available information from Bangladesh Forest Department (BFD) the total forest land is 25,75,196 hectares which is 17.45 percent of total area of the country. The Sundarban is the largest mangrove forest in the world. It lies at the southern part of the Ganges delta and is spread across the coastal areas of Bangladesh and West Bengal of India. The section of Sundarban that belongs to Bangladesh has been listed in the UNESCO world heritage. The Sundarban is known for its wide range of flora and fauna. Sundarban is the home of the world famous 'Royal Bengal Tiger'. Numerous species of birds, spotted deer, crocodiles and snakes also inhabit there. The country produces timber, bamboo and cane. Bamboos grow in almost all areas but quality timber grows mostly in the hilly region of country. Among the timber sal, gamari, chaplish, telsur, jarul, teak, garjan and sundari are valuably important. Plantation of rubber in the hilly regions of the country was undertaken and extraction of rubber had already been started.

Climate

Bangladesh enjoys generally a sub-tropical monsoon climate. While there are six seasons in a year, three namely, Winter, Summer and Monsoon are prominent. Winter which is quite pleasant begins in November and ends in February. In Winter there is not usually much fluctuation in temperature which ranges from minimum of 7°C—13°C (45°F—55°F) to maximum of 24°C—31°C (75°F—85°F). The maximum temperature recorded in Summer is 37°C (98°F) although in some places this occasionally rises up to 41°C (105°F) or more. Monsoon starts in June and stays up to October. This period accounts for 80% of the total rainfall. The average annual rainfall varies from 1429 to 4338 millimeters. The maximum rainfall is recorded in the coastal areas of Chattogram and northern part of Sylhet district, while the minimum is observed in the western and northern parts of the country.

Population

Bangladesh Bureau of Statistics conducted the sixth Population and Housing Census in the country on June 15-21, 2022. According to the last census the population (adjusted) of the country is 169.83 million in 2022. The male population is 84.08 million and female is 85.65 million. The average annual growth rate of the population is 1.22 per annum. The density of population was 976 per sq.km. in 2011 which increased to 1119 per sq.km. in 2022. The sex ratio of the population is found to be 98.04 in 2022 which was 100.3 in 2011. The total number of households is 41,010,051 which is distributed as 27,820,341 in rural areas and 13,189,710 in urban areas.

Bangladesh Bureau of Statistics introduces Sample Vital Registration System (SVRS) in 1980 to determine the annual population change during inter-censal period. As reported in the SVRS the population (estimated) of the country stood at 171.73 million in 1 July, 2022. The male population was 84.74 million and female 86.99 million. The rate of natural growth of population was 1.35. The density of population was 1153 per sq.km. in 2021 which increased to 1163 per sq.km. in 2022. The sex ratio of the population is found to be 97.5 in 2022.

Labour Forces

The total labour force (15+) of the country has been estimated at 73.41 million as per provisional report of the Labour Force Survey, 2022, of which 47.48 million are male and 25.93 million are female while it was 63.5 million for both sex, 43.5 million for male and 20.0 million for female in Labour Force Survey 2016-17.

*Capital and
other Cities*

Dhaka, formerly known as Dacca, is the capital and the largest metropolitan city of the country. The city is within the monsoon climate zone, with an annual average temperature of 25⁰ C (77⁰ F) and monthly varying between 18⁰ C (64⁰ F) in January and 29⁰ C (84⁰ F) in August. Chattogram is the main sea port and second largest metropolitan city of Bangladesh and has extensively developed port facilities for ocean steamers.

*Administrative
Setup*

Bangladesh is governed by a Parliamentary Form of Government. The President is the head of the State while the Prime Minister is the head of the Government. According to the Constitutions, the Prime Minister is appointed by the President based upon the result of the electorate's choice in parliamentary general election. The Prime Minister is assisted by a council of ministers in discharging his/her duties. For the convenience of administration, the country is divided into eight administrative divisions; each is placed under a Divisional Commissioner. Each division is further sub-divided into zilas (Districts). After the administrative re-organization carried out in 1984, the country has been divided into 64 zilas. Each zila is further divided into a number of Upazilas (Sub district). The representatives of the government at zila and upazila level are Deputy Commissioner (DC) and Upazila Nirbahi Officer (UNO) respectively.

The legislature

The constitution provides a Parliament for Bangladesh (to be known as the House of the Nation) in which legislative power of the Republic is vested. It consists of 300 members directly elected by adult franchise. The Members of House of the nation elect another 50 female members. Thus, the total number of members of the House is 350.

The Judiciary

The Supreme Court of Bangladesh is the highest judicial organ and comprises of the Appellate Division and the High Court Division. The Supreme Court of Bangladesh is headed by a Chief Justice. The Supreme Court serves as the guardian of the constitution and enforces the fundamental rights of the citizens. The Appellate Division hears and determines appeals from judgments, decrees, orders or sentences of the High Court Division. At the district level, the district court is headed by Sub judge who is assisted by Additional District Judge, subordinate judges, assistant judges and magistrates.

*Local
Government*

The tiers of Local Government are (i) Union Parishad, (ii) Upazila Parishad, and (iii) Zila Parishad. However, in the urban areas, there are two types of Local Government System –namely (i) Pourashava (Municipality) and (ii) City Corporation. The Local Government bodies are constituted by the representatives directly elected by the people.

*Fundamental
Foreign Policy
of Bangladesh*

The fundamental Foreign Policy of Bangladesh is - The state shall base its international relations on the principles of respect for national sovereignty and equality, non-interference in the internal affairs of other countries, peaceful settlements of international disputes, and respect for international law on the principles enunciated in the United Nations Charters and on the basis of those principles shall –

- a) Strive for the renunciation of the use of force in international relations and for general and complete disarmament;
- b) Uphold the right of every people freely to determine and build up its own social, economic and political system by ways and means of its own free choice; and
- c) Support oppressed peoples throughout the world waging a just struggle against imperialism, colonialism or racialism.

*Communication
System*

The country has about 3093.38 kilometers of rail-way, 22476.28 kilometers of paved road and roughly 6000 kilometers of perennial and seasonal waterways. Side by side with development of road transport, efforts are under way to develop the water transport system. In fact, rivers are the life line of the nation, which provide the cheapest means of transport, water for agricultural operation and ensure supply of fish for people. Steps have been taken to put more mechanized boats into service and modernize the existing country boats.

Regarding air transport facilities, Dhaka is connected by air with Toronto, London, Bangkok, Abudhabi, Tokyo, Kuala Lumpur, Singapore, Karachi, Mumbai, Kolkata, Dubai, Jeddah, Kathmandu, Yangon, Kuwait, Rome and Bahrain by her national airline (Biman). A number of foreign airlines operate their international services with a link to Dhaka. Regular air services are operated by the Biman between Dhaka and other major towns in the country. The two sea ports of Bangladesh are situated in Chattogram and Mongla. Payra sea port is the 3rd sea port of Bangladesh located on the bank of Rabnabad Channel under Kalapara, Patuakhali. Among the river ports and terminals, Dhaka, Narayanganj, Chandpur, Barishal, Khulna, Aricha, Paturia, Goalando, Jagannathganj ghat, Bhairab Bazar, Bahadurabad and Fulchari ghat are important.

The country has a network of radio and television broadcasting. There were two television stations in Dhaka and Chattogram under government and it increased to 17 stations. Presently 35 television channels are broadcasting under the government & private ownerships. The television system was introduced on 25 December, 1964 and since then sub-stations have been set up in Sylhet, Khulna, Rangpur, Mymensingh, Natore, Noakhali, Satkhira, Cox's Bazar, Rangamati, Thakurgaon, Patuakhali, Brahmanbaria, Jhenaidah, Rajshahi etc. The Colour Television system was introduced on 1st December, 1980. An extensive telecommunication system has connected the capital city with other places within the country. Telecommunication lines have also been established with major cities of the world through the earth satellite ground stations at Betbunia in the Chattogram Hill-Tracts and Talibabad (Kaliakoir) in Gazipur Zila. In order to cater the high speed of data communication Bangladesh has already been linked with information superhighway through submarine cable in the Bay of Bengal.

Education and Culture

The education system of Bangladesh is divided into Three levels (i) Primary (from grades 1 to 5), Secondary (from grades 6 to 10), Higher Secondary (from grades 11 to 12) and Tertiary. Besides, there are some private institutions providing English medium education. They offer 'O' level and 'A' level courses. The highest allocation in the national budget for education exposes that Government of Bangladesh is very much keen for human resources development through education. Bangladesh has also Madrasa education system which emphasizes on religious matters.

Bangla is the mother tongue of Bangladesh. But to establish Bangla as the mother language, Bangalees had to sacrifice their lives. A number of People were martyred in February 21, 1952 to establish the rights of mother language. In recognition of their supreme sacrifice, UNESCO declared 21st February as the "International Mother Language Day" throughout the world.

Bangladesh has a rich historical and cultural past; combining Dravidian, Indo-Aryan, and Mongolian, Mughal, Arab, Persian, Turkish and West European cultures. The land, the rivers and the lives of the common people combined have formed a rich heritage. The culture of Bangladesh is composed of different forms, including music, dance and drama, art and craft, folklores and folktales, language and literature, philosophy and religion, festivals and celebrations etc. Festivals and celebrations are an integral part of the culture of Bangladesh. Pohela Baishakh (Bengali New Year), Independence Day, Victory Day, National Mourning Day, Eid-ul-Fitre, Eid-ul-Azha, Muharram, Durga Puja, Shahid Dibash and International Mother Language Day, Buddha Purnima etc. are widely celebrated, across the country.

Bangladeshis are great enthusiasts of sports and games. Football, handball, basketball, volleyball, table tennis, hockey, badminton, cricket, kabaddi (known as Ha-Du-Du), swimming, boat racing and lawn tennis are some of the most popular outdoor games in this country.

Agriculture and Main Crops

Bangladesh is mainly an agricultural country. Agriculture contributes about 11.66 % (FY 2021-22) to the total Gross Domestic Product (GDP) of the country. According to the provisional report of Quarterly Labour Force Survey 2022 this sector accommodates around 45.33% of total labour force. Due to natural calamities like flood cyclone, drought, loss of production in both food and cash crops are almost a regular phenomenon. Yet in recent years, there has been a substantial increase in food grain production. Agricultural holding in Bangladesh is generally small but use of modern machinery and equipment is gradually increasing. Rice, jute, sugarcane, potato, vegetables, wheat, tea and maize are the principal crops of Bangladesh. Crop diversification programme, credit supply, extension work, research and input distribution policies pursued by the government are yielding positive results. The country is now on the threshold of attaining self-sufficiency in food grain production.

Fish Wealth

Bangladesh is rich in fish wealth. In the innumerable rivers, canals, tanks and other low lying and depressed areas and paddy fields that remain under water for about 6 months in a year and cover nearly 12 million acres, tropical fish of hundreds of varieties are cultivated. Rice and fish constitute an average Bangladeshi's principal diet. Hilsa, lobsters and shrimps are some of the fish varieties that are exported to foreign countries. Having the Bay of Bengal in the south of the country enjoys geographic advantage for marine fishing.

Mineral Resources and Energy

Bangladesh has a few proven mineral resources. The country has enormous deposit of natural gas. As of December 2022, 28 gas fields have been discovered from which natural gas is available for power-generation, industrial and other uses. Fertilizer factories that are operating in the country including the petro-chemical complex at Ashuganj and also those yet to be commissioned in near future are and will be using sizeable quantity of natural gas.

Coal deposits have been found in Bangladesh and mining activity is going on with international assistance. Electricity is produced by both thermal and hydro-electric process. The total generation of electricity amounted to 85607 million kilowatt hours in 2021-22. The solitary hydro-electric project having installed capacity of producing 230 MW electricity is located at Kaptai in the Chattogram Hill Tracts. Limestone, the basic raw material for the production of cement, has been found in some places in the country and cement factories are being set up for their utilization. Other minerals found include hardrock, lignite, silica sand, white clay, etc. Salt is manufactured on a small scale at several thousand evaporation sites in the coastal areas of Chattogram and Cox's Bazar.

Extensive radio-active sand deposits have been found all along the beaches from Kutubdia to Teknaf. A survey estimates the reserve to be of the order of 0.5 million tons of sand containing a significant amount of usable heavy minerals.

Industries

Although Bangladesh is predominantly an agricultural country. A large number of large-scale industries based on both indigenous and imported raw materials have been set up. Among them ready-made garments, cotton textile, pharmaceuticals, fertilizer, wood product, iron and steel, ceramic, cement and plastic product, chemical are important ones. Other notable industries are engineering and ship building, oil refinery, paints, colours and varnishes, electric cables and wires, electric lamps, fluorescent bulbs, other electrical goods and accessories, matches, cigarettes etc.. Among the cottage industries, handlooms, carpet-making, shoe-making, coir, bamboo and cane products, earthenware, brass and bell metal products, bidi and cheroots, small tools and implements, ornaments, etc. are important.

The manufacturing sector contributes about 22.63% of the total GDP. The industry that has been making crucial contribution to the economy is none other than the readymade garment (RMG) industry which is now the single biggest export earner for Bangladesh. Bangladesh holds the second position in ready-made garments exports and majority export goes to the European Union and the USA. In 2021-22 the export earnings from RMG sector was 42613.15 Million USD which accounts for 81.82% of total export earnings of the country.

*Finance,
Banking and
Insurance*

Bangladesh has a mixed banking system comprising nationalized, private and foreign commercial banks. Bangladesh Bank is the central bank of the country and is entrusted with the responsibilities of formulating monetary policies of the Government and controls all commercial banks. The Grameen Bank is a core microfinance organization and also community development bank in Bangladesh providing small loans (known as microcredit) to impoverished people without requiring collateral. The system is based on the idea that the poor have skills that are under-utilized but do not have the capacity to take loan from conventional banks by providing collateral. The bank also accepts deposits, provides other services, and runs several development-oriented businesses including fabric, telephone and energy companies.

In recent years, the banking system has been greatly changed. In light of the avowed Government policy of encouraging the private sector to play its due role in economic development of the country. The Government has allowed setting up of commercial and investment banks in the private sector. In response to this encouraging Government policy quite a number of commercial and investment banks including some Islamic banks have been set up in the private sector and have started functioning.

There are other specialized financial institutions namely, House Building Finance Corporation, Bangladesh Krishi (Agriculture) Bank, Bangladesh Shilpa (Industrial) Bank, Bangladesh Shilpa Rin Sangstha (Industrial credit organization) and Co-operative Banks which are operating in their respective fields to facilitate these sectors by providing credit and other services at convenient terms. Industrial Credit and Investment Corporation of Bangladesh has also been set up by the Government to provide equity support to public limited companies in the private sector.

In the field of insurance, the Government has allowed both public and private sectors to operate life as well as non-life insurance business in order to develop a strong competition. In the public sector, there are one Jiban Bima Corporation for the life insurance business and one Shadharan Bima Corporation for general insurance business. In the private sector more than sixty-one (61) companies are engaged in life and general insurance business.

*Tourists
attractions*

Bangladesh is a large delta laden with bounties of nature. The borderland along the north-east, east and the south-east is evergreen forested hills with wondrous wildlife. All her six seasons vibrate with fairs and festivals, mirth and merriment.

Though Bangladesh is one of the world's smallest countries, it has the world's longest unbroken sandy sea-beach along the Bay of Bengal at Cox's Bazar, The Sundarbans, (the largest mangrove forest), the home of the Royal Bengal Tiger and the spotted deer, it is recognized as the part of world heritage by UNESCO for being the diffuse home of flora and fauna. Dhaka - the capital known as the city of mosques, Rangamati - the heart of the panoramic lake district, Sylhet-land of holy shrines of great religious saints and of fascinating hills and tea gardens, Chattogram - the largest port city and the Commercial Capital of the country known as the city of holy shrines, Mainamati, Mahasthangarh and Paharpur archaeological treasures in the country over the period from 300 BC to 1200 AD. Saint Martin's, a beautiful coral island about 10 km south-west of the southern tip of the mainland is a tropical slime, with beaches fringed with coconut plants and

beautiful marine life are one of the most attractions in the country. Except these, Kuakata's long and wide unique beach and Foy's lake, a man-made lake in Patuakhali sets amidst picturesque surroundings is the natural form. Above all riverine beauty, colourful tribal life and simple village life of the friendly millions are the main motivational factors for potential visitors.

Bangladesh has a variety of attractions for visitors, tourists and holidaymakers including archaeological sites, historical mosques and monuments, resorts, beaches, anthropological communities, forests, flora and fauna.

The Government of Bangladesh recognized tourism as an industry and declared a National Tourism Policy for the development of domestic and international tourism in Bangladesh. Bangladesh Parjatan Corporation, National Tourism Organization is playing the leading role as promoter of the industry.

*Bangladesh
Vision-2041*

The selected targets of Vision 2041 which is aimed to build Bangladesh as a developed country are:

Indicator	Target FY31	Target FY41
Real GDP Growth (%)	9.0	9.9

Empowerment of Women

The term empowerment is a process through which women in general gain control over resources and decision making.

The present situation of the women in our country is unfortunate, the women especially who live in the rural areas passing inhuman life. Rights and liberty are the dream to them, Number of women is not enough in our administration and Very few women are involved in Politics. The political status of our women is not satisfactory. Participation of women in our economic activities is also very poor. Wage differentials between men and women are very high in case of wage employment.

The factors behind the disempowerment of women are:

A. Economic factor	B. Socio-cultural and	C. Political factors
i) Dependency on men	religious factors	i) Indifference of political parties
ii) Ownership of land	i) Illiteracy	ii) Limited participation in electoral politics
iii) Less scope for employment	ii) Socially ignored	iii) Intra-household discrimination
	iii) Cultural apathy	
	iv) Purdah or Seclusion	

Education Policy

With a view to implementing the election manifesto 2008, Vision 2021 and digital Bangladesh, The government has adopted consistent with what has been provided for in the constitution and it will work as a strategy to develop the country as secular and citizen friendly environment where well planned education system will operate to ensure social welfare.

The policy aims at stimulating intellectual ability and instilling work culture and social skills as well as establishing moral, human, cultural, scientific and social values at personal and national levels.

The main characteristics of the education policy is to develop a humane, rational, principled, self-respecting, non-superstitious, tolerant, non-sectarian, patriotic and hardworking citizen capable of leading humanity development and people-oriented development and progress.

Energy Policy/Plan

The latest Power System Master Plan (PSMP) 2016, sponsored by Japan International Cooperation Agency (JICA), was aimed at assisting the Bangladesh in formulating an extensive energy and power development plan up to the year 2041, covering energy balance, power balance, and tariff strategies. Five Goals were set in PSMP 2016 which are: 1) Enhancement of imported energy infrastructure and its flexible operation; 2) Efficient development and utilization of domestic natural resources (gas and coal); 3) Construction of a robust, high-quality power network; 4) Maximization of green energy and promotion of its introduction; 5) Improvement of human resources and mechanisms related to the stable supply of energy. Bangladesh also formulated an 'Energy Efficiency and Conservation Master Plan (EECMP)'. A newly planned 'Integrated Energy Power Sector Master Plan' is likely to be introduced in 2023. The Tokyo-based consulting firm 'The Institute of Energy Economics, Japan (IEEJ)' has been working to prepare this plan following an agreement between the Bangladesh government and Japan International Cooperation Agency (JICA) signed on 15 March 2021. As part of energy policy, along with coal-based thermal power generation the nuclear power generation initiative has been taken by Bangladesh to reduce dependency on natural gas. The use of renewable energy is also getting emphasize.

*Industrial
Policy*

The industrial policy 2010 of Bangladesh proposed an integrated strategy of economic growth through rapid industrialization. It has been prepared taking into consideration the government's determination to achieve millennium development goals by 2015, and halve the number of the unemployed, and hunger and poverty- stricken people by 2017. To alleviate poverty by creating additional employment opportunities, the policy aims to create job for one person per family.

The aim of the industrial policy is improving the socio-economic condition of the people by achieving industrial growth and creating massive employment opportunities through industrialization through concerted efforts of government and private sector.

The industrial policy 2016 targets the contribution of the industrial sector to the existing national income will be increased from 29 percent to 35 percent and the contribution of the labor force from 16 percent to 25 percent in order to implement the overall development vision of the government, by 2021. In addition, the policy emphasizes to play a role in inclusive development by increasing human resource and income generating employment through industrialization.

Chapter 1

LAND AND ENVIRONMENT

1.01 Characteristics of General Soil Types

General Soil Types	Division/District of important occurrence	Characteristics
Floodplain Soils		
01. Non-calcareous Alluvium	Chattogram: Brahmanbaria, Chandpur, Chattogram, Cumilla, Rangamati, Khagrachhari & Bandarban Hill districts, Cox's Bazar. Sylhet: Habiganj, Moulvibazar, Sunamganj & Sylhet. Dhaka: Dhaka, Jamalpur, Kishoreganj, Manikganj, Mymensingh, Narayanganj, Narsingdi, Netrokona, Sherpur & Tangail. Rajshahi: Bogura, Dinajpur, Gaibandha, Kurigram, Lalmonirhat, Naogaon, Nilphamari, Pabna, Panchagarh, Rangpur & Sirajganj. Barishal: Barishal, Bhola, Pirojpur, Patuakhali & Barguna.	Raw sandy and salty alluvial deposits, usually stratified either from the surface or below the cultivated topsoil in the active floodplain areas (young char lands) or massive in the older flood plain areas. Brahmaputra and Teesta alluvia are rich in mica and biotite, alluvia of other rivers are less micaceous. These are neutral to alkaline in reaction and are saline in the coastal tidal areas.
02. Calcareous Alluvium	Chattogram: Chandpur, Chattogram, Cox's Bazar, Feni, Lakshmipur & Noakhali. Dhaka: Dhaka, Faridpur, Gopalganj Madaripur, Manikganj, Munshiganj, Rajbari & Sariatpur. Khulna: Bagerhat, Khulna, Kushtia, Magura, Narail & Satkhira. Rajshahi: Chapai Nawabganj, Natore, Pabna & Rajshahi.	Calcareous Alluvium is similar in characteristics to the Non-calcareous Alluvium in addition, these are slightly to moderately calcareous due to presence of calcities derived mostly from the Gangetic sources. St. Martins Island has sands mixed with calcareous coral debris. These are saline in the coastal tidal areas.
03. Acid Sulphate soil	Chattogram: Cox's Bazar. Khulna: Bagerhat, Khulna & Satkhira.	Grey or dark grey clayey soils with yellow patches of jarosite developed in tidal deposit areas, once covered by mangrove vegetation, lying adjoining to Khulna Sundarbans in the Ganges tidal floodplain and the Chakaria Sundarbans in the coastal tidal floodplain of Cox's Bazar District. These become extreme acidic and toxic when dried/drained. These are also saline to variable degrees.
04. Peat	Barishal: Barishal & Pirojpur. Sylhet: Habiganj, Moulvibazar & Sylhet. Dhaka: Gopalganj, Madaripur & Netrokona. Khulna: Bagerhat, Jashore, Khulna & Narail.	Highly organic dark coloured soils developed under submerged conditions mainly in the Gopalganj-Khulna basin areas and locally in Hakaluki Haor and other smaller waterlogged beels and valleys. If it is drained and allowed to dry out peat shrinks irreversibly, and causes cracking and subsidence of the ground surface.

General Soil Types	Division/District of important occurrence	Characteristics
05. Non-calcareous Grey Floodplain Soils	Barishal: Barguna, Barishal, Jhalokathi, Patuakhali & Pirojpur. Chattogram: Brahmanbaria, Chandpur, Chattogram, Cumilla, Cox's Bazar, Feni, Khagrachhari, Lakshmipur, Noakhali. Sylhet: Habiganj, Moulvibazar, Sunamganj & Sylhet. Dhaka: Dhaka, Gazipur, Jamalpur, Kishoreganj, Manikganj, Munshiganj, Mymensingh, Narayanganj, Narsingdi, Netrakona, Sherpur & Tangail. Khulna: Bagerhat. Rajshahi: Bogura, Dinajpur, Gaibandha, Kurigram, Joypurhat, Lalmonirhat, Naogaon, Nilphamari, Panchagarh, Rangpur, Sirajganj & Thakurgaon	Prismatic and/or blocky structured predominantly grey sandy loams to silty clay loams on young floodplain ridges and silty clay loams to clays in basins, slightly acid to neutral. These become saline in dry season in the coastal tidal areas.
06. Calcareous Grey Floodplain Soils	Chattogram: Chandpur, Chattogram, Feni, Lakshmipur & Noakhali. Barishal: Barishal, Barguna, Bhola, Patuakhali & Pirojpur. Khulna: Bagerhat, Khulna, Narail & Satkhira.	Structured, grey silt loams to silty clays, calcareous from the surface or at shallow depths, developed from Ganges alluvium. These become saline in the dry season in the coastal tidal areas.
07. Grey Piedmont Soils	Chattogram: Brahmanbaria, Chattogram, Rangamati, Khagrachhari & Bandarban Hill districts, Cumilla, Cox's Bazar, Feni. Dhaka: Mymensingh, Netrakona & Sherpur. Sylhet: Habiganj, Moulvibazar, Sunamganj & Sylhet	Structured, grey sandy loams to clays, strongly acid, developed in piedmont outwash in the piedmont aprons and valleys in areas adjoining or within the north-eastern hilly region. These soils are often affected by flash floods from the hills and liable to burial by fresh sandy deposits.
08. Acid Basin Clays	Chattogram: Brahmanbaria & Cumilla, Dhaka: Dhaka, Gazipur, Jamalpur, Kishoreganj, Mymensingh, Narsingdi, Netrakona, Sherpur & Tangail. Rajshahi: Bogura, Chapai Nawabganj, Naogaon, Natore, Pabna, Rajshahi & Sirajganj. Sylhet: Habiganj, Moulvibazar, Sunamganj & Sylhet	Very strongly acid, grey to dark grey heavy plastic clays mainly occurring in the Sylhet haor and Chalan beel areas and in deep valleys of the Madhupur Tract. These are usually seasonally deeply flooded and have heavy consistence.
09. Non-calcareous Dark Grey Floodplain Soils	Barishal: Barishal, Patuakhali & Pirojpur, Chattogram: Brahmanbaria, Chandpur, Cumilla, Feni, Lakshmipur, Noakhali Dhaka: Dhaka, Faridpur, Gazipur, Gopalganj, Jamalpur, Kishoreganj, Madaripur, Manikganj, Munshiganj, Mymensingh, Narayanganj, Narsingdi, Netrakona, Sariatpur, Sherpur & Tangail. Khulna: Bagerhat, Chuadanga, Jashore, Jhenaidah, Khulna, Kushtia, Magura, Meherpur, Narail & Satkhira. Rajshahi : Bogura, Dinajpur, Gaibandha, Kurigram, Naogaon, Natore, Nilphamari, Pabna, Panchagarh, Rajshahi, Rangpur, Sirajganj & Thakurgaon. Sylhet: Habiganj, Moulvibazar, Sunamganj & Sylhet.	Structured dark grey loamy soils on old flood plain ridges and clay in basins. Slightly acid to somewhat alkaline in reaction. The basin clays have heavy consistence.

General Soil Types	Division/District of important occurrence	Characteristics
10. Calcareous Dark Grey Floodplain Soils	Dhaka: Dhaka, Faridpur, Gopalganj, Madaripur, Manikganj, Munshiganj, Rajbari & Sariatpur. Khulna: Bagerhat, Chuadanga, Jhenaidah, Khulna, Kushtia, Magura, Meherpur, Narail & Satkhira. Barishal: Barishal, Jhalokati & Pirojpur. Rajshahi: Chapai Nawabganj, Natore, Pabna, Rajshahi & Naogaon	Structured dark grey silty clay loams to heavy clays occurring in basins and on low ridges of the old Ganges river floodplain and locally in the Ganges tidal floodplain and old Meghna estuarine flood plain. Soils are calcareous within a depth of 1.2m below the surface. Clays are highly cracking when dry, drought prone and have heavy consistence. These become saline in the day season in the Tidal floodplain.
11. Calcareous Brown Floodplain Soils	Chattogram: Chandpur, Feni, Lakshimpur & Noakhali. Dhaka: Dhaka, Faridpur, Gopalganj, Madaripur, Manikganj, Munshiganj, Rajbari & Sariatpur. Khulna: Bagerhat, Chuadanga, Jhenaidah, Khulna, Kushtia, Magura, Meherpur, Narail & Satkhira. Rajshahi: Chapai Nawabganj, Natore, Pabna, Rajshahi & Noagaon	Calcareous, brown silt loams to light silty clays, occurring in the Ganges river floodplain and locally in the young and old Meghna estuarine flood plains. Locally these are leached of lime up to a depth of 1 m from the surface.
12. Non-calcareous Brown Floodplain Soils	Chattogram: Chattogram, Rangamati, Khagrachhari & Bandarban Hill districts Dhaka: Jamalpur, Narsingdi, Mymensingh, Netrakona & Sherpur, Khulna: Chuadanga, Jhenaidah, Jashore & Satkhira. Rajshahi: Bogura, Chapai Nawabganj, Dinajpur, Gaibandha, Kurigram, Lalmonirhat, Nilphamari, Panchagarh, Rangpur & Thakurgaon.	Non-calcareous brown sandy loams to clay loams occurring in the old Himalayan piedmont plain, Tista and old Brahmaputra floodplains and locally in the old Ganges river floodplain. Soils are slightly to strongly acid in reaction.
13. Brown Piedmont Soils	Chattogram: Bandarban, Chattogram, Cox's Bazar & Khagrachhari. Sylhet: Habiganj, Moulavibazar & Sylhet. Dhaka: Mymensingh, Netrakona & Sherpur.	Brown sandy loams to clay loams occurring in the higher sites of valleys and piedmont plains in and around the north-eastern hill areas. Soils are very strongly acidic.
14. Black Terai Soils	Rajshahi: Dinajpur, Panchagarh & Thakurgaon.	Very dark grey to black sandy loams to clay loams occupying low floodplain ridges and depressions mainly in the northern part of the old Himalayan piedmont plain. Top soils are strongly to very strongly acidic but the sub soils are slightly acidic in reaction.
Hill Soils		
15. Brown Hill Soils	Chattogram: Bandarban, Cumilla, Chattogram, Rangamati, Khagrachhari & Bandarban Hill districts, Cox's Bazar & Feni. Dhaka: Mymensingh, Netrakona & Sherpur. Sylhet: Habiganj, Moulavibazar, Sunamganj & Sylhet.	Brown sandy loams to clay loams, slightly to strongly acid, sometimes shallow over shaley/sandstone bedrocks on very steep high hills

General Soil Types	Division/District of important occurrence	Characteristics
Terrace Soils		
16. Shallow Red-Brown Terrace Soils	Dhaka: Dhaka, Gazipur, Jamalpur, Mymensingh & Tangail. Rajshahi: Naogaon.	Brown or red brown, usually strongly acid, structured, friable to firm clay loams to clays intergrading into a greyer, compact Madhupur clay substratum within a metre below the surface. These mainly occur on the narrow terraces of the Mahupur Tract and locally in the dissected Barind Tract.
17. Deep Red-Brown Terrace Soils	Chattogram: Brahmanbaria Dhaka: Dhaka, Gazipur, Jamalpur, Mymensingh, Narsingdi & Tangail. Rajshahi: Bogura, Dinajpur, Gaibandha & Rangpur.	Brown to red, slightly to strongly acid, finely structured, friable clay loams to clays, gradually intergrading into a mixed red, black and pale brown, friable, weathered Madhupur clay substratum to a deeper depth. These occur extensively on the edges of broad level terraces in the Madhupur Tract and locally in the north- eastern edge of the Barind Tract.
18. Brown Mottled Terrace Soils	Dhaka: Dhaka, Gazipur, Jamalpur, Mymensingh & Tangail. Rajshahi: Bogura, Dinajpur, Gaibandha, Joypurhat, Naogaon & Rangpur.	Brown mottled with specks of grey, pale brown and red, slightly acid, structured, friable clay loams to clays intergrading into a mixed red black and pale brown, rather friable and weathered Madhupur Clay substratum. These occur in the middle parts of the broadly dissected level terraces of the Madhupur Tract and locally on the edges of the Barind Tract.
19. Shallow Grey Terrace Soils	Dhaka: Dhaka, Gazipur, Jamalpur, Mymensingh & Tangail. Rajshahi: Bogura, Chapainawabganj, Dinajpur, Joypurhat, Naogaon, Rajshahi, Rangpur & Sirajganj.	Whitish grey slightly to strongly acid, friable, somewhat porous silt loams to silty clays intergrading into a weakly mottled grey, compact and little altered Madhupur clay substratum at a shallow depth. These occur extensively in the level Barind Tract and locally on the flat areas of the narrow terraces of the Madhupur Tract.
20. Deep Grey Terrace Soils (including Grey Valley Soils)	Dhaka: Dhaka, Gazipur, Jamalpur, Mymensingh & Tangail. Rajshahi: Bogura, Chapai Nawabganj, Dinajpur, Gaibandha, Joypurhat, Naogaon, Rajshahi & Rangpur.	Whitish grey, speckled with brown or red mottles, slightly to strongly acid, friable and highly porous silt loams to silty clay loams, usually grading into a strongly mottled red and grey, rather friable and permeable Madhupur clay at a deeper depth. These occur extensively in the western parts of Barind Tract and also, in smaller extent in the interiors of broad level terrace of the Madhupur Tract and in shallow valleys in both areas.

Per capita milk and milk-product availability series has been revised since 1975-76 owing to exclusion of fluid equivalent of local milk-product from the total. Milk product of imported milk (SMP) is not taken into consideration due to lack of data on share distribution.

CHAPTER 15

NOTES ON DATA AND THEIR SOURCES AND OTHERS

Chapter 1

General Features and Environment

The main objectives of this chapter are to provide a broad idea of the historical emergence of the nation as well as the location, physiography, climatic conditions, and major socio-economic features of the country. This information is helpful, particularly for those foreign readers who would like to have some idea about Bangladesh.

Data on the characteristics of general soil types and division and district-wise distribution of agricultural lands by types have been collected by BBS, from the Director, Soil Resources Development Institute. Data on forest area by regions are from the administrative records of the Chief Conservator of Forests, govt. of the People's Republic of Bangladesh.

Hydrological data, river system in Bangladesh, main rivers according to length, area of major standing water bodies, the flow of major rivers, water level of major rivers, Static water, and in-stream storage potential, tidal variation and highest salinity, etc. are presented in this chapter. The main sources of these data are the administrative records of SRDI, WAPDA, MPO, SPARRSO& BWDB.

Data on the loss of human lives and properties in recent major cyclones and tidal surges compiled from the administrative records of the Bangladesh Meteorological Department have been presented in this chapter.

Data on annual rainfall, monthly temperature, humidity, rainfall, maximum and minimum temperature are presented here from the records of the Bangladesh Meteorological Department.

Chapter 2

Area, Population, Household and Housing Characteristics District

In this chapter, attempts have been made to provide information on administrative units in Bangladesh, households, and population by district, upazila, and municipality, intercensal growth of population, age-sex distribution, marital status of the population, population by religion, youth population, tribal population, birth and death rates, mortality, life expectancy and population of major cities. Information on households by the source of drinking water, toilet facilities, and electricity connection has also been provided in this chapter.

Sources of data

The main sources of data are Population and Housing Census reports of 1961, 1974, 1981, 1991, 2001, 2011& 2022 and reports of the Sample Vital Registration System, BBS.

Sample Vital Registration System (SVRS) was introduced by the Bangladesh Bureau of Statistics (BBS) in 1980 to determine the annual socio-demographic changes in population during the intercensal period. Initially, 103 Primary Sampling Units (PSUs) were selected and each PSU comprised of about 250 continuous households. Out of 103 PSUs, 62 PSUs were from rural and 41 PSUs were from urban areas. With this sample size, it was possible to produce estimates at the national level with an urban-rural break-up. Based on the technical committee's recommendation and to meet the data need of the planners, policymakers, and other users the sample PSUs were increased to 210 PSUs in 1983 having 150 from rural and 60 from urban areas. This could provide estimates at the division levels with an urban-rural break-up. in 1991. To meet the users' demand for district estimated, the number of PSUs was again increased to 500 in 1995. With the availability of a sampling frame from the Population Census-2001, the sample design was recast. An Integrated Multi-Purpose Sample Design was introduced with effect on July 01, 2002 and the number of PSUs increased to 1000 to provide the estimate of vital events at the district level. The number of PSU was increased from 1000 to 1500 under the newly formed IMPS design based on Population Census 2011. Data collection from 1500 PSUs was started in July 2013, till 2014. Now data is being collected from 2012 PSUs.

Dual Recording System

The strength of the sample vital registration is the collection of data under a dual record system to estimate demographic indicators using Chandra Sekaran and Deming Technique introduced from the beginning. Under System-1, a local registrar is engaged for each PSU who used to collect data about each vital event as and when it occurs and records it in the specified schedule and then sends the filled-in schedules to the headquarters according to the timetable set for each schedule. Under System-2, the staff members from Upazila and District Statistical Offices (Supervisors) visit the PSUs on a quarterly basis and collect retrospective data on all the events. Supervisors regularly check the quality of work obtained by the local registrars and supervisors. The filled-in schedules obtained from both the systems are coded and matched at the headquarter by pre-designed matching criteria and staff members of

SVRS Project and Demography and Health Wing at Head Quarter evaluates the work of these two systems and re-visit, wherever necessary.

Sample Selection

The IMPS frame developed from population census 2011 served as the sampling frame for the collection of data in the SVRS. A single stage stratified cluster sampling methodology was adopted for the selection of SVRS sample EA's. Administrative divisions of the country were regarded as the domain of the study. These domains were divided into three residential categories, viz. rural, urban and city corporations. A total of 935 urban EA's and 1077 rural EA's were selected from the entire sample area comprising of 2012 PSUs.

Definitions on Fertility and Mortality

FERTILITY

Sex-Ratio

The ratio of males to females in a given population usually expressed as the number of males per 100 females.

Child-Women Ratio (CWR)

The number of children under 5 years of age per 1,000 women of child bearing age (between ages 15 and 44 sometimes 15 to 49) in a given year. It is a rough fertility indicator based on census data. It is sometimes used when no adequate data on births are available.

Crude Birth Rate (CBR)

The number of live births per 1000 mid-year population in a given year.

Age-Specific Fertility Rate (ASFR)

Number of live births to women in a given age group per 1,000 women in the same age group in a given year. It is usually calculated for 5 years age groups from 10-14 to 45-49 or 15-19 to 45-49.

Total Fertility Rate (TRF)

The average number of children that would be born alive to a woman (or group of women) during her reproductive period if she were to live through all her child-bearing years and bear children according to the age specific fertility rates of a given year.

Gross Reproduction Rate (GRR)

The average number of daughters that would be born alive to a woman (or a group of women) during her life time if she passed through her child-bearing

years conforming to the age-specific fertility rates of a given year.

Net Reproduction Rate (NRR)

The average number of daughters that would be born to a woman if she passed through her life time from birth conforming to the age-specific fertility and mortality rates of a given year. This rate is similar to the gross reproduction rate and takes into account that some women will die before completing their child bearing years. NRR 1.00 means each generation of mothers is having exactly enough daughters to replace itself in the population.

MORTALITY

Crude Death Rate (CDR)

The number of deaths per 1000 mid-year population in a given year.

Child Death Rate (CH. DR.)

The child death rate is defined as the number of deaths among children in age 1-4 per 1000 mid-year population in the same group.

Infant Mortality Rate (IMR)

The number of deaths to infants under one year of age per 1000 live births in a given year.

Life Expectancy at Birth

The average number of additional years a person would live if current mortality trends were to continue.

NATURAL GROWTH RATE (NGR)

The natural growth rate is the difference between crude birth rate (CBR) and crude death rate (CDR) expressed in percentage.

Chapter 3 Labour Forces

The labour force amounted to 73.41 million population in 2022 increasing by 9.9 million people compared to the previous Labour Force Survey 2016-17. The labour force consisted of 70.78 million employed population and 2.63 million unemployed population. Among the total employed population 45.79 million were male and 24.99 million were female.

In 2022, the unemployment rate for the population aged 15 or older decreased to 3.6% which was 4.2% in the previous survey (2016-17). The labour force participation rate in rural areas (65.28%) was higher

than in urban areas (51.05%). Considering the employment in the broad economic sector it is observed that the agriculture sector (32.2 million) comprised the highest than gradually the service sector (26.65 million) and industry sector (12.05 million).

Chapter 4

Agriculture: Crops, Livestock, Forestry and Fishery

This chapter concerns with data on agriculture. Broad agriculture sector comprises of agriculture, forestry and fishing. Agriculture, forestry and fishing sector is divided into 4 sub-sectors: i) Crops and Horticulture, ii) Animal Farming, iii) Forest and Related Services, iv) Fishing. The value-added originating in each branch of the activities is equivalent to the value of gross output minus the value of current inputs used for producing that output. For example, in crop sub-sector the value of gross output is obtained by multiplying the quantity of the output of each crop by homestead prices. The value of inputs such as seed, fertilizer, pesticides etc. is also worked out by the same method (i.e. the quantity used times their respective purchase cost/price) and subtracted from the value of gross output of crops to end up with value added which is equivalent to the sum of compensation of employees and gross operating surplus originating in agricultural crops sub-sector. The value added defined as such, is also estimated for other sub-sectors like, animal farming, forest and related services and also for fishing sector.

Gross value added at current and constant prices is shown in table no. 4.02 and 4.03. Gross value added from Agriculture at constant prices is shown in table 4.10 to 4.13.

Chapter 5

Industry

This chapter focuses on the present position and trend of industry sector in Bangladesh. It includes the Index of Industrial Production (IIP) and Producer Price Index (PPI) and presents the statistical series data of the industry. The index of industrial production comprises of three sub-sectors of industry namely (i) manufacturing, (ii) mining and quarrying and (iii) electricity. Quantities underlying these series are important indicators to indicate the growth of industrial sector of the country. The base year of both indices is 2015-16.

The index of industrial production has been compiled by three categories considering the Total

Person Engaged (TPE) in the establishment for the revision, review and rebase of the base year 2015-16.

1. IIP- Large scale (TPE: 250 and above)
2. IIP- Small, Medium and Micro (SMMI) scale (TPE: 10-249)
3. IIP- Cottage scale (TPE: 1-9)

The weight for IIP-Large scale and IIP-SMMI is derived from the Gross Value Added (GVA) using updated Survey of Manufacturing Industries (SMI) 2019 and the weight for IIP-Cottage is derived from the Gross Value Added using Cottage Industry Survey 2011 at 4-digit class level . Each class of industry has a weight equal to its relative contribution to the total gross value added of production.

IIP is a weighted average of the relative changes in the quantities of a specified set of goods and services over time. PPI is also a weighted average of the relative changes in the prices of a specified set of goods and services over time. The weights of fixed base period are used for the indices and the Laspeyre's formula has been used for the compilation of IIP.

All sub-sectors (manufacturing, mining & quarrying and electricity) included in the Index of Industrial Production has been shown in the table no. 5.01. The table no. 5.02, 5.03, 5.04 show the Index on Large Scale, Index on SMME Scale, Index on Cottage Industries subsequently at 4-digit class level following ISIC Rev. 4. The table no. 5.05 shows Price Index on domestically produced industrial goods at 4-digit class level.

Chapter 6

Energy

Data on energy have been identified according to the sources of supply via, commercial and traditional. The former has been defined here to include natural gas, crude oil, petroleum products, coal and electricity.

However, the data relating to traditional sources are relatively poorer in quality as they had to be assembled from a variety of sources producing information highly elusive and widely scattered over the economy.

This chapter represents data on the national energy balance and energy use by major sources and on the availability of energy and its final sector-wise consumption. This also gives a statistical picture of

electrical power generation, transmission and distribution. The administrative records of Bangladesh Petroleum Corporation (BPC), Petrobangla and BPDB are the sources of the data.

Chapter 7

Transport and Communication

Transport and communication sector cover: (i) Railway transport; (ii) Road transport (mechanized/non-mechanized vehicles); (iii) Water transport (mechanized/non-mechanized); (iv) Air transport; (v) Communication Telephone services, Postal services, Radio and Television services) and (vi) Tourism.

Data of this sector are usually collected from secondary sources. The following type is collected by mail and/or personal contact from the concerned organizations:

Railway Transport

Bangladesh Railway compiles data on the operation of the railway's route kilometer, stations, and rolling stock by gauge, passenger and cargo carried, revenue earnings, operational expenses, and other aspects of railway traffic and publish in their information book. The statistics on railway transport are mainly collected from Bangladesh Railway for this book.

Road Transport

Statistics is gathered from a variety of sources scattered over the wide range of the economy and as such quality of data is affected to the extent by the multiple objectives underlying the collection and compilation of data by the sources concerned. However, the same for the organized sector, defined to be registered and/or maintained in the form of records either administrative or statistical, are of good quality and fairly reliable. The organizations in the organized sector and the statistics collected from them are shown below.

Bangladesh Road Transport Corporation: operation of bus, coach, and truck plying on road. Roads and Highways Department: road mileage by type of road, the progress of road construction, and expenditure incurred on maintenance of roads, culverts and targets achieved. Bangladesh Road Transport Authority, Ministry of Communication, Railway Division, Roads and Road Transport Division: number of vehicles (on-road) registered by type of vehicles, the motor car, bus, truck, taxi, jeep, station wagon, auto-rickshaw, motorcycle, etc.

classified by region, seating capacity, and kind of fuel used.

Water Transport

Statistics of this sector are also to be characterized by similar nature, sources, and methodology of amassing the basic data. Here again, the quality of data is a little undermined when these from traditional sources are to be monitored. But those from the organized sector are fairly dependable. The sources and the statistics collected from them are shown below:

— Chattogram and Mongla Port Authorities: vessels handled and their turn round at ports, cargo handled by major commodity groups, number of national and international seaborne ships entered into and cleared from the ports.

— Bangladesh Inland Water Transport Authority (BIWTA): type and category of vessels, tonnage and passenger capacity and navigable waterways etc.

Bangladesh Inland Water Transport Corporation (BIWTC): number of vessels by type, passenger and cargo carried, and the ferry services under its control and supervision.

Bangladesh Shipping Corporation (BSC): number of vessels with carrying capacity, number of voyages, passengers and cargo carried, net profit earned, assets and liabilities, working capital, etc.

Aviation

Statistics of this sector though small in size but good in quality are well maintained by Biman Bangladesh Airlines, the national carrier of the country. The statistics collected from this source are the performance of Biman, number of airplanes by type, number of flights operated on National routes and passengers and cargo carried.

Communication

The type of statistics collected in this highly organized public sector is shown below:

— Bangladesh Post Office Department: number of post offices in the country by division, number of letters, money orders booked through post offices, and postal rates (air mail) from Bangladesh to selected countries. It also provides data on some radio sets licensed.

— Bangladesh Telecommunications Company limited: number of telephone sets in the country by division and also several telegraph offices by region.

— Bangladesh Television: number of television sets licensed by type and by region.

Tourism

Statistics of this sector are narrowly defined to include only international tourist movements. Bangladesh Parjatan Corporation is the concerned organization that provides data on the arrival of tourists by nationality and foreign exchange earnings thereof etc.

Road Accidents

Statistics of this nature are the indicators of efficiency of public administration and are regularly compiled in Police Directorate. The Police Directorate is responsible for the collection and compilation of several road accidents by region and by important cities. These data concern the number of accidents and the number of persons injured and killed in such accidents.

Fare and Freight Index

The index has been developed based on the fare and freights of Bangladesh Railways, Bangladesh Road Transport Corporation (BRTC), Bangladesh Inland Water Transport Authority (BIWTA) and Biman Bangladesh Airlines. The Laspeyre's formula has been used for computing the index with 1995-96 as the weighted base year.

Chapter 8

Foreign Trade Statistics

1.1 Introduction

Collection, compilation and dissemination of Foreign Trade Statistics (FTS) on both exports and imports are considered as one of the major activities of BBS. BBS brings out this annual publication regularly since 1973-74. The specific objective of FTS is to ensure timely availability of foreign trade data for policy-makers, planners, researchers and other users. This publication contains data on exports and imports with unit, value, quantity and country of origin by commodity following the harmonized commodity description and coding system (HS code) at 2 to 8 digits level.

Publishing micro level data on foreign trade is considered as one of the salient features of the report to its users. To maximize the utilization of the publication, time series data together with

comparative statistics have also been presented and discussed. To have an overall view at a glance about foreign trade trend, summary and key findings have been added at the beginning of the report.

1.2 Data Collection Process

At present, BBS collects foreign trade data only from secondary sources. All data are originated from the various customs stations such as sea, land and air ports have been collected from the National Board of Revenue (NBR). NBR collects data from all customs stations that are the primary sources of foreign trade data. BBS collects online data from NBR which contain data in tabular form covering different fields of FT. BBS uses some data as per its requirements from these diversified fields.

In the past, BBS collected 'bills of entry' for imports and 'shipping bills' for exports entries for sea born data. For customs clearance, the importers had to submit bill of entry and exporters shipping bills to the customs houses located at the sea port of Chittagong and Mongla for every consignment imported into or intended of export from Bangladesh. BBS personnel posted at Chittagong and Mongla Customs Houses were responsible for collecting and sending these bills to BBS. The BBS staffs posted at the mentioned two customs houses used to collect the documents regularly and carried them to Dhaka twice or thrice a month. At present, BBS only collects online data from NBR.

Accordingly, the land-born foreign trade data were compiled from the monthly returns received from the land customs stations across the country.

Air-borne data were collected from the air-borne trade returns. These are the bill of entries for imports and customs statements for exports that are received from the air freight unit in Dhaka. But at present, both land-born and air-born foreign trade data have been collected online from NBR.

1.3 Scope and Coverage

Except military hardware, bullion, currency notes, coins and goods in transit, FTS includes all other commodities which pass through the boundary of customs territory. In case of imports, all goods and commodities entering into the country and for exports, all goods and commodities leaving the country are incorporated in FTS.

FTS also covers data of the commodities imported to and exported from the country recorded at Export Processing Zones (EPZ). The entire data on exports and imports recorded at various routes such as sea, air, land and postal parcels are taken into account for further processing.

1.4 Classification of Commodities

On the basis of ‘harmonized commodity description and coding system (HS code)’ based on the Standard International Trade Classification (SITC) Rev-3, FTS of Bangladesh are compiled and classified. These classifications are arranged in 98 chapters under 21 sections which cover all commodities of international trade. They include under broad headings of commodities at 4-digit level and detailed description of 8-digit level. BBS has prepared the HS code at 2 to 8-digit level to cover all commodities under foreign trade. Imports are recorded by country of consignment and exports by country of the last known destination. BBS enlists the quantities and values collected online from NBR against HS code and commodities imported and exported. BBS does not change the value of the commodity supplied by NBR. But, in case of quantity, BBS checks and rechecks them in order to find out any inconsistencies between value and quantity. If any anomaly is found, BBS examines it and fixes a reasonable figure of quantity based on observations of last few years’ figures of the same commodity. Bangladesh Bureau of Statistics follows Brussels Definition of Value (BDV) for the purpose of valuation. The BDV of goods was introduced in December 1950 under the Principles of the General Agreement on Tariffs and Trade (GATT). The objective was to provide a comparable system of valuation. It has been accepted by almost all countries of the world. Under the BDV, the dutiable value of goods imported for home consumption is calculated at normal price i.e., the price which they could fetch at the time when duty becomes payable on a sale in the open market. In practice, valuation of goods is rather tricky and depends on expediency of revenue collection. Currently, tariff values or the international prices are perceived by the customs authority from floor level for the purpose of determining customs and related duties. BBS records import value on cost, insurance and freight (CIF) basis and export value on free on board (FOB) basis.

1.5 Data Processing, Tabulation and Publication

Foreign Trade Section head of National Accounting Wing collects online data from NBR on a monthly basis. Then that online data is sent to the officers of Foreign Trade Section National Accounting Wing, BBS for rearranging, processing, tabulating etc. After completion of related works the personnel of Foreign trade Section do the correction, compilation and editing. Though most of the tabulations are made according to HS Coding, some selected tabulations are done on the basis of category of goods by different exporting or importing accounts.

Selected monthly tables are published in the Monthly Statistical Bulletin and other monthly and annual publications of BBS. FTS are published on fiscal year basis, from July 1 to June 30.

1.6 Systems of Trade

There are two systems of computing trade statistics: (i) the special trade system and (ii) the general trade system. Special trade system is based on the concept of “clearance through the customs frontiers” which is, in fact, the statistical boundary. Any commodity that is not cleared by the customs is excluded from such statistics. The general system of trade considers the national boundary as the statistical frontier. It means that all goods and commodities except military goods, bullion, currency notes, coins and goods in transit, entering or leaving the country are recorded in trade statistics.

Earlier Bangladesh followed the special trade system. For better coverage, Bangladesh is now applying the general trade system. The main characteristics of the general trade system are summarized below:

General System of Trade

Imports

- i) Imports “entering directly” for home consumption or use.
- ii) Imports into customs bonded manufacturing plants.
- iii) Imports into customs bonded warehouses and free area.

Exports

- i) Exports of national production.
- ii) Exports from customs bonded manufacturing plants.
- iii) Nationalized exports.
- iv) Exports from customs bonded warehouses and free area.

Re-export is included after clearance from customs and falls under category (iii) and (iv) mentioned above.

1.7 Computation of Trade Indices

Indices of imports and exports are designed to measure the overall position and direction of movements of values, prices, and quantum of commodities bought and sold in international markets. The construction of indices is based on

published data. One type of index i.e. unit price index is computed by taking 2002-2003 as the base year.

Unit Price Index (UPI): It represents the overall direction of price movements of commodities bought and sold in international markets. Prices are based on FOB values of exports and CIF values of imports.

The main reasons for selection of 2002-03 as base year are:

- i) It was considered as a normal year for business/trade activities.
- ii) In 2002-03 BBS, harmonized commodity description and coding system (HS) 8-digit level was adopted. In HS coding system, the total number of commodities is 8123. For better classification and representation of new commodities in the index basket, the year of introduction HS code was chosen as the base year.

BBS has been computing various annual indices of foreign trade and publishing them in its Monthly Statistical Bulletin and other monthly and annual publications.

Chapter 9

Finance, Foreign Aid, Banking, Insurance, Co-operatives and Credit Distribution

Finance

Government budgets are of two kinds revenue budget and development budget. Budget estimates are prepared by the Ministry of Finance. These are required to be placed before the JatiyoSangshad for discussion and to the President for approval.

Revenue receipts are classified under two major heads, viz, tax receipts and non-tax receipts. Tax receipts include income and wealth tax, land revenue, customs, excise, sales tax, etc. Non-tax items cover income from Government enterprises and properties such as post offices, telegraph & telephone, railway, currency, forest, civil works and registration fees, etc.

The economic classification of the Government budget has been presented in the respective table. Economic analysis of the budget involves the re-classification of budgetary data according to economic and functional characteristics.

Development expenditures of the Government by various sectors have been presented. These are based on the annual development expenditure of the Government. The development expenditure of the Government has been compiled from data collected through a detailed questionnaire filled in by the government and its agencies and in cases of non-response estimates are derived from the Annual Development Programme.

Receipts and expenditures of the Bangladesh railway, post office, and telephone and telegraph department have been presented separately. Separate budget estimates for these departments are prepared and required to be presented before the JatiyoSangshad. Economic analysis of these budgets involves re-classification of budgetary data according to economic and functional characteristics.

Receipts and expenditures of corporations and autonomous bodies including financial institutions and insurance companies have been presented.

The budgets of the corporations and autonomous bodies have been analyzed and re-classified according to the economic and functional characteristics.

Receipts and expenditures of local government bodies such as Municipalities, Zila, Thana, and Union Parishad have been shown in separate tables. These data have been collected through a detailed questionnaire filled in by the local government bodies. The sources of these data are the annual budgets of the institutions themselves.

Banking, Insurance, Co-operative and Credit Distribution

This chapter presents data on the financial activities of nationalized, foreign, and private banks as well as the financial transactions of cooperative societies and other specialized financial institutions in Bangladesh.

Banking

There are tables on bank branches operating in Bangladesh. Consolidated position on abilities and assets of scheduled banks, bank advances for economic purposes, foreign exchange reserves, lending rates and rate of interests for profit on National Saving Schemes, cash remittance, and use of foreign currency accounts held by Bangladeshis staying abroad. Bangladesh Bank and concerned Bank organization are the sources of data.

Insurance

There are tables in this connection that present structural information on Insurance companies/organizations in Bangladesh. Statistical data on claims and surrenders in the Life Insurance business etc are presented Department of Insurance is the source of data.

Chapter 10

Prices & Wages

1. Construction of Consumer Price Index (CPI)

The CPIs are compiled on monthly basis. Monthly prices of various items are used for computation of the indices. Annual indices are also computed by averaging the 12 month's indices. The reference groups of the indices are the average urban and rural households of Bangladesh.

Three principal consumer indices (CPIs) are produced and disseminated i.e. National, urban, and all rural. The national CPI is calculated by combining the urban and rural indices using as weights, the country-wide urban and rural household expenditure multiplied by the total number of urban/rural households as available from population Census data. For computing the three CPIs all goods and services included in the index baskets were classified under eight commodity groups following the ILO standard and recommendations of the IMF mission. The indices covered eight commodity groups which are: -

- (1) Food, beverage and tobacco,
- (2) Clothing and footwear,
- (3) Gross rent, fuel and lighting,
- (4) Furniture's furnishings household equipment & operation,
- (5) Medical care and health expenses,

- (6) Transport and communications,
- (7) Recreation, entertainment, education and cultural services,
- (8) Miscellaneous goods and services.

Selection of items: The items selected should be as representative as possible. In the case of the cost of living index, the items selected should represent the consumption habit of the people. To achieve this, the total number of items is divided into groups and subgroups and then from each group a representative sample is selected for inclusion. Bangladesh Bureau of Statistics regularly (after a certain interval) conducts Household Income and Expenditure Survey (HIES). So, Household Income and Expenditure Survey (HIES) data can be used for this purpose. Expenditure incurred in various items based on the 2005-06 Household Income and Expenditure Survey (HIES) was the basis of determining weights for the selection of items in the index basket.

The earlier using price schedules are updated on the basis of 2005-06 Household Income and Expenditure Survey (HIES) suggested by the IMF mission (December,1997- January,1998). Recently the base year has been shifted to 2005-06.

The CPI items for the National index and its regional components have been classified into 8 major groups. Some new items are incorporated in the new two price schedules in the index basket. There is no selected item for the National basket that is priced all over the country. The national basket comprises urban and rural. National market consists of urban market and rural market. Urban Market is specific for urban area and rural market is specific for rural area.

Number of items index basket (Base: 2005-06=100):

Sl. No.	Name of index	Number of items
1.	CPI Rural	318
2.	CPI Urban	422
3.	CPI National	-

Selection of Base Year: Index numbers are designed to make a comparison between prices regarding different periods. For any index number computation, there must be a base year/reference year for comparison. The base year should be a year of

Economic stability or in other words a normal year. The base year should be normal and it must be free from economic, political, and social disturbances and as far as possible. Under the recommendation of the IMF Mission (08/07/2012 to 19/07/2012), the year 2005-06 has been selected as the base year for the computation of the consumer price index (CPI).

Bangladesh Bureau of Statistics has been regularly compiling the following consumer price index numbers on the basis of 2005-06 as the base year.

- (i) Consumer price index, urban areas.
- (ii) Consumer price index, rural areas.
- (iii) Consumer price index, National.

Determination of Weights: The commodities included in the index number are not all of equal importance; we must consider the problem of weighing the different commodities included in the index number according to their importance. Bangladesh Bureau of Statistics conducts Household Expenditure Survey (HES). So, the consumption patterns were determined based on the results of the 2005-06 Household Income and Expenditure Survey (HIES) based on a sample of 7420 households of which 5040 in rural and 2380 in urban. Item weights were devised to reflect the significant changes that had occurred in the consumption pattern. Almost all the item weights have been taken from the tabulation of HIES data. In calculating the National CPI, urban and rural indices have been combined using as weights the total country-wide urban and rural household expenditure i.e. average monthly urban/rural expenditure multiplied by the total number of urban/rural households as available from the population census data. The weights of national CPI, urban and rural have been derived from the computer data sheets of 2005-06 Household Income and Expenditure Survey. The base year is 2005-06 and the basket and weights were determined on the basis of the 2005-06 Household Income and Expenditure Survey (HIES), which covered a sample of 7420 households.

Weighting patterns of CPI National (Base:2005-06 =100)

Locality	Average monthly household Expenditure (Tk.)	No. of households (Million)	Total monthly Expenditure (Million Tk.)	Weight (%)
Bangladesh	-	22.13	90630.66	100
Urban	7274	3.63	26383.56	29.11
Rural	3473	18.50	64247.10	70.89

BBS has taken up compilation of urban, rural, National CPIs. The National CPI is derived from the indices compiled separately for the urban and rural households, based on the new weights calculated by the IMF mission using the 2005-06 HES. BBS revised the new weights to better reflect the consumption patterns of household. The weights of individual items of CPI, all urban and all rural have been derived from the computer data sheets of 2005-06 Household Expenditure Survey. The weights of group and sub-group of CPI, all urban and all rural have been derived from the computer data sheets of the 2005-06 Household Expenditure survey which is given below.

Group	Weight Rural	Weight Urban
General	100.00	100.00
i. Food, Beverage And Tobacco:	61.407	46.519
Non-Food	38.977	53.481
ii. Clothing and Footwear:	6.903	6.719
iii. Gross Rent, Fuel & Lighting	12.302	19.638
iv. Furniture & Furnishing		
Household Equipments& Operations	4.645	4.883
v. Medical Care And Health	3.380	3.650
Expenses:		
vi. Transport & Communication:	4.686	7.859
vii. Recreation, Entertainment		
Education & Cultural Services:	3.425	5.867
viii. Miscellaneous Goods & Services	3.248	4.863

Formula Used: In the majority of countries, the index numbers are computed using Laspeyres formula, the weighted arithmetic mean of price relatives, the weights being the base year values. For computation of the indices Laspeyre's formula is used. The formula is given below: -

$$I = \frac{\sum \frac{P_n}{P_o} \times W_i}{\sum W_i} \times 100$$

where, I = Consumer Price Index (CPI)

P_n = Price in the current year/month

P_o = Price in the base year/month

W_i = Weight at the ith item

$\sum W_i$ = Weight of the group

II. Method of Construction of House-rent Index:

- (a) **Definition of House-rent:** House-rent is the actual monthly rent paid to the owner of a private residential house excluding gas,

electricity, and water charges. Residential houses of Government, Semi-Government, other organizations, and also enemy property/abandoned property are not included in the house-rent collection.

- (b) **House-Rent index:** Till 1987-88 House-rent index of 14 categories of private residential houses have been constructed for 6 centers viz. Dhaka, Chattogram, Rajshahi, Khulna, Rangpur, and Sylhet quarterly with 1984-85 as a base, and thereafter the index is being constructed for 4 centers viz. Dhaka, Chattogram, Rajshahi & Khulna centers. This is an unweighted index. A simple average of 4 centers is taken for constructing the index for Bangladesh.
- (c) **Source of data:** House-rent of private residential houses is collected after every three months by the trained field staff of BBS. Two houses of each category have been selected for regular collection of rent and two houses have been kept reserved.

III. Method of Computing Indices of the Cost of Building Construction:

The index of the cost of construction of a building is divided into 3 groups, viz. (i) Building materials (ii) Transport cost, and (iii) Labour Charges of construction labor. Till 1998-99 the Index have been constructed for 6 centers Viz. Dhaka, Chattogram, Khulna, Rajshahi, Barishal, and Sylhet. A simple average of 6 centers is taken as the national Index. Group weight and weights for individual items were determined through a survey on prices of Building materials, transport cost & Labour Charges of construction conducted during the period 1998-99. The base period of the Index is 1998-99. Laspeyre's formula is used for constructing the Index.

Source of Data: Prices used in the Index are collected by the trained field staff of BBS.

Number of items and weight distribution by group by centre are as follows:

Centre	Building Materials		Transport cost		Labour Charges	
	No. items	Weight	No. items	Weight	No. items	Weight
Dhaka	61	78.10	4	2.77	6	19.13
Chattogram	61	77.84	4	2.80	6	19.36
Khulna	61	76.35	4	2.93	6	20.72
Rajshahi	61	79.95	4	2.57	6	17.48
Barishal	61	75.10	4	3.00	6	21.90
Sylhet	61	75.04	4	2.88	6	23.08

IV. Method of computing the Wage Rate Index:

- (a) **Definition of Wage Rate:** Amount of money received either in cash or in kind in a day for standard daily working hours or earnings of low paid labor who works on hourly basis have been included here as wage earners. Salary paid and high contract-based earnings have been excluded from compilation of WRI.
- (b) **Wage Rate Index:** Wage Rate Index (WRI) is an important indicator for measuring the trend and changes in the aggregate wages of the wage earners of a country. The wage rate index is intended to measure the movement of nominal wages of low paid skilled and unskilled labour over time in different sectors of the economy. It is also used to measure changes in real wages. Bangladesh Bureau of Statistics (BBS) has been producing and publishing Wage Rate Index (WRI) since 1974 on regular basis with 1969-70 as base year. Already BBS has revised and rebased the Wage Rate Index (WRI) with 2010-11 as current base year. It has been prepared with the help of Labor Force Survey-2010.

Rebasing of Wage Rate Index from 1969-70=100 to 2010-11=100 comprises three broad economic sectors like Agriculture, Industry and Service. This rebasing of wage rate data on monthly wages for specific 44 occupations in the agriculture, industry and service sectors are considered. Average monthly wage rate of low paid skilled and un-skilled labourers are estimated by 44 occupations such as 11 occupations from agriculture sector, 22 occupations from industry sector and 11 occupations from service sector.

Name of Sectors	Weights
i) Agriculture:	61.50
a) Agriculture	60.32
b) Fisheries	1.18
ii) Industry:	25.87
a) Construction	17.32
b) Production	8.55
iii) Service:	12.63

- (c) **Source of data:** Monthly wage rate data are collected from 64 districts of the country on monthly basis. Wage rates of the day labourers in regards to (i) without food (ii) with food are collected by 64 district statistical offices, BBS.

Chapter 11 National Income

National accounts estimation is one of the core activities of BBS. BBS has been compiling GDP and other national accounts aggregates by production approach and expenditure category since 1972-73. At present these estimates are based on the 2008 SNA framework and 2015-16 as a base year for the constant price estimates.

BBS is largely confined to the compilation of GDP by Industrial origin and GDP by expenditure components. GDP by industrial origin is in more detail, providing estimates of gross value added by 15 major ISIC sectors. GDP estimates both current and constant market prices are provided by fiscal years (FY) i.e. for the July-June period.

Estimates of GDP by expenditure components are less elaborate. Estimates are made for basic aggregates such as private and public consumption, gross fixed capital formation by public and private sectors, and exports and imports both in current and constant prices.

It is worthwhile to mention that BBS has revised GDP and other national accounts estimates from 2005-06 to 2015-16 with 2015-16 as a base year for constant price estimates. The revised provisional estimates reflect a wide data coverage along with methodological improvements for the estimation of outputs of various sectors and subsectors.

The national accounts statistics are published in the various regular publications of BBS with limited scope. Besides, BBS has published detailed statistics on national accounts in the publication namely: - Twenty Years of National Accounting of Bangladesh, 1972-73 to 1991-92 and National Accounts Statistics of Bangladesh (Revised Estimates, 1989-90 to 1998-99). BBS also releases a brochure on preliminary and final estimates of GDP in the middle of each fiscal year.

Chapter 12 Education

Statistics of enrollment, educational attainment, grade, students, teachers and educational institutions have been compiled following the concepts, definitions, classification and tabulation procedures as per revised recommendations of the UNESCO conference on Standardization of Educational Statistics (ISES) as far as practicable in the context of Bangladesh.

Educational attainment is defined as the highest grade completed and/or attained by a person in the system of regular special and adult education at home or abroad.

Grade is defined as a stage of instruction usually covered in the course of a school year.

Student (Pupil) is defined as a person enrolled and/or registered in a programme of education defined at the outset.

Class is defined as group of students (Pupils) who are usually instructed together by a teacher or by several teachers.

Teacher is defined as a person employed, even part-time and/or without remuneration to communicate knowledge, skills etc.

A school (educational Institution) is defined as a group of students (pupils) of one or more grades, organized to receive the instruction of a given type and level under one teacher, or of various types and/or levels under more than one teacher under the direct supervision of the head of the establishment. A school is said to be a government school if it is operated by the government whether national or local, whatever the origin of its financial resources. Similarly, a school is said to be a private school if it is not operated by a government authority (national or local), whether or not it receives financial support from such authorities. The latter can, however, be further classified as "aided" or "non-aided" depending on whether or not they derive financial support from government authorities.

Statistics on educational finance presented also conform to the following definitions:

- Receipts refer to cash received by or made available to or for schools, including appropriations, subventions, fees, cash value of property received as gifts, etc.
- Expenditures refer to financial charges incurred by or on behalf of schools for goods and services.
- Capital/development expenditures refer to expenditures for land, building and equipment etc.

The system of education through the indicators of the number of educational institutions, teachers and student participation rate, teacher-student ratios, operating expenses per student, and total govt. expenditure on education, percentage of literacy etc. has been presented in the respective tables.

The number of teachers and student ratio in public universities is shown from 2011 to 2013. Yearly average per head expenditure in public universities student and faculty wise number of students in public universities have been shown. The number of students' teacher's institutes, faculty, department, male-female students, and subject-wise number of students in private universities, 2012 have been present in this chapter. The number of general colleges with students, teachers by region and output of the examinations of general colleges have been shown in separate tables. The number of govt. and non-govt. recognized Intermediate and Degree colleges with several teachers and students therein by region and by sex have been given in the tables. The number of secondary schools by govt. and non-govt. by region, by urban and rural distribution, have been given. The number of secondary schools with teachers and students by gender, average no. of teachers and students per Secondary school and teacher-student ratio have been shown.

Government & affiliated Madrasahs with several teachers and students by type and by region and the result of the madrasah education, as reported by the Bangladesh Madrasah Education Board, have been given. The number of primary schools by govt. and

non-govt. with teachers and students, by rural and urban, students by sex and region, the average number of students and teachers per primary school and teachers students ratios as reported by primary education officers, Ministry of Education, have been given in separate tables.

Sanskrit and pali tools with teachers and students are also given, a number of Technical Institution by type with teachers and students for 2012 the number of Teachers Training colleges both primary and secondary level have been given in separate tables. Unanicollege with the number of teachers and students, as available from the Bangladesh and Board of Unani and Ayurvedic system of Medicine, have been presented in respective tables. Professional colleges as law, Agriculture, Arts & crafts, Home Economics, Social welfare and Research, with number of students and teachers as obtained from the Bureau of Educational Information and Statistics have been given in the tables.

The results of the S.S.C and H.S.C and Technical Education as obtained from the Boards of Intermediate and Secondary Education, Technical Education Board and Bureau of Educational Information and Statistics have been presented in respective tables. The school attendance rate by age and sex, and the literacy rate by region are given in respective tables. The rate of literacy for census years, however, are not directly comparable because of difference in definitions that have been appended to the tables concerned. The gross expenditure on education by type of educational Institution has been compiled by BBS and appended in the concerned tables. Tuition fees of different educational institutions and the average monthly tuition charge in the Dhaka Metropolitan Statistical Area have been presented in separate tables. The number of primary and Junior scholarships awarded in Bangladesh by grade & rate has been given in a table.

Chapter 13

Health, Family Planning and Social Statistics

This chapter presents data on health facilities, manpower and services, public expenditure and nutritional status. Data are also presented on social issues and community facilities including a number of tube wells, newspapers, book publishing and circulations, film production, cinema halls, legal services, crime and religious institutions.

Growth of medical facilities, number of medical colleges, post-graduate medical institutes, T.B. clinics and rural health centers, The Directorate of health services is the source. The number of hospitals and hospital beds, number of blood slides examined and malaria cases detected are shown in the tables concerned. The Ministry of Health and Family Welfare and the Directorate of Health Services are the sources.

Local production of drugs and medicines, comparative prices of selected imported raw materials and licentiate business units in drugs by categories are given in respective tables.

Public expenditure on health and related activities in the health sector are given in separate tables. The Bangladesh Bureau of Statistics is the source. Data on the district-wise distribution of health, maternal and child health and family planning facilities have been presented in respective tables. The Directorate of Population Control and Family Welfare is the source. The table shows data on a number of family planning personnel by region. The target and achievement of family planning activity by method, year-wise target for new contraceptive acceptors required to meet the 4th five-year plan and year-wise mix of different contraceptives under 4th five-year plan are shown in respective tables. Region-wise family planning activities, current use of contraception among currently married women 15-49 years of age by method, percentage of currently married women 15-49 years of age using Contraception, percentage distribution of current users of non-clinical family planning methods by the reported source of supply and allocation in five-year plan for family planning and population control programme have been given in separate tables. The contraceptive survey and the BBS are the sources. Concerned tables present the progress of sinking deep tube wells in saline areas and a number of hand tube wells for drinking water in rural areas by region. The productions and no. of sales centre of sanitary latrines by former districts up to 2004-05 have been shown in

table & show the number of newspapers and books published and a number of newspapers & periodicals with their gross circulation. The production of films by type and language and the number of cinema houses by region, the number of advocates and lawyers by region, the number of crimes by type and number of places of worship by region, and data on the regional non-govt. hospitals and clinics with beds, number of Imams trained by region have been given on respective tables.

Chapter 14

POVERTY, INEQUALITY, HOUSEHOLD INCOME, EXPENDITURE AND CONSUMPTION

This chapter focuses attention on the flow of selected items of consumption goods as a periodic but partial measure of change in the basic needs of the society regardless of its equity. The details of socio-economic data collected from the results of the household income and expenditure survey conducted by Bangladesh Bureau of Statistics in different years are presented for user's benefits.

Household Income

Household income is defined as the material return in kind or in cash in exchange for goods and services etc, by the household earners, other than boarders, lodgers and servants. The income of the household was further classified by recording monthly and annual income in cash or in-kind and imputed income as related to the reference period.

Household Expenditure

Consumption expenditure refers to the household consumption expenditure defined as the value of goods and services finally consumed by resident households of Bangladesh.

Household Income & Expenditure Survey (HIES), BBS

Introduction

Household Income and Expenditure Survey (HIES) is the prime data source for estimating household income, expenditure, consumption, income inequality and incidence of poverty in Bangladesh. Household Expenditure Survey (HES) is being conducted since the pre-liberation period in the territory now constituting Bangladesh. After the liberation of the country in 1971, the first round of

HES was conducted in 1973-74. In the year 2000 the scope of the survey was broadened and accordingly it was renamed as Household Income and Expenditure Survey (HIES). It is heartening to note that 17 rounds of surveys have so far been conducted after liberation of Bangladesh.

Over the years, improvements have been made in data collection, coverage and data analysis of the HIES. The recall method was followed in HES conducted between 1973-74 and 1981-82 for the collection of data on sources of income, expenditure on durable and non-durable goods and other consumption items. In the 1983-84 survey, both recall and diary methods were introduced. Two types of questionnaires were developed for collecting data under these two methods. Under the recall method data were collected on income and non-food expenditure with varying reference periods. Data on food consumption were collected daily by locally recruited diary keepers for one month. These two methods were followed in HES conducted in 1983-84, 1985-86, 1988-89 and 1995-96.

Data collection, as well as data entry methods, were further improved in HIES. In the year 2000, trained enumerators collected income, expenditure and consumption data. Data about daily consumption of food items were collected on day to day basis by the same enumerators who were deputed to the respective Primary Sampling Units (PSUs). Another innovative technique was followed in the HIES 2000 through the introduction of data entry into laptop computers at the field level by the enumerators themselves. This method facilitated the correction of errors or inconsistencies, if any, by the enumerators at the field level.

In HIES 2000 and 2005, a lot of measures were taken for collecting detailed information on income in addition to those on expenditure and consumption. Accordingly, from the year 2000, this survey was termed as Household Income & Expenditure Survey (HIES) as mentioned earlier. Moreover, detailed modules on education and health

were introduced in HES 2000 to assess the status of health and education in the country.

In HIES 2005, the health and education modules were recast and redesigned. Minor changes were also made in other modules including the food consumption module where provision for dining out was included to capture food consumed outside by the household members. In addition, a new module on “Social Safety Nets” was introduced in this round of the survey.

In HIES 2010, 4 new modules were introduced with the previously existed modules. These are (1) Disability (2) Migration and Remittances (3) Micro Credit and (4) Crisis & Crisis Management. Besides, the Social Safety Net module was redesigned and somewhat shortened. To improve the income data, the scope of agriculture productivity was broadened to include both temporary crops and fruits.

HIES 2016 was carried out during April 2016-March 2017. In 2016 HIES, the questionnaire included more comprehensive coverage of different income sources of households compared to earlier rounds. In 2016 the SSNP module was modified and enhanced with the technical support of the World Food Programme (WFP).

Bangladesh Bureau of Statistics (BBS) has completed the seventeenth round of HIES from January to December 2022. In HIES 2022, BBS made significant developments by selecting the most qualified enumerators, conducting residential training, introducing CAPI, improving data collection tools, substantially increasing the number of food and non-food items based on COICOP, and implementing continuous monitoring and supervision, among others. Therefore, significant measurement enhancements have been reflected in income and expenditure aggregates.

1.1 Objectives of the Survey

The main objectives of HIES 2022 are to:

- ▶ Obtain detailed data on household income, expenditure and consumption.
- ▶ Determine poverty profile with urban and rural breakdown.
- ▶ Provide information about standard of living and nutritional status of population.

- ▶ Provide data to determine the weights of consumer price indices.
- ▶ Provide household level consumption data used in compiling national accounts estimate.
- ▶ Provide detailed information on health status and educational level of the population.
- ▶ Determine poverty estimates by administrative divisions and detailed socio-economic characteristics of the population and households.
- ▶ Provide benchmark data for formulation of appropriate policy for poverty reduction, improvement in standard of living and nutritional status of the population.
- ▶ Provide relevant data for monitoring of the Poverty Reduction Strategy (PRS)/Five year plan and the Sustainable Development Goals (SDGs).
- ▶ Provide data on nature, volume and distribution of resources under different Social Safety Net programmes.
- ▶ Collect data related to calculation of demand function and elasticity.
- ▶ Generate data for formulating appropriate fiscal policies.
- ▶ Collect data on type and extent of disability by age, sex and locality.
- ▶ Provide data on migration and remittances.
- ▶ Collect detailed data on credit and repayment situation and practices.
- ▶ Collect data on crises at household level, its impact and strategy for management.

1.2 Sampling Design of HIES 2022

For HIES 2022, a two-stage stratified cluster sampling design was followed under the sampling frame developed from the available second zonal operation of Population and Housing Census 2022. The primary sampling unit (PSU) was the Enumeration Area (EA) of the Population and Housing Census 2022. Each EA is a cluster of around 100 households.

At the first stage, required number of PSU's were selected and a complete household listing was carried out in the selected PSU's. Then at the second stage, 20 households were selected randomly from each selected PSUs for interview in the field.

1.3 Sample Size of HIES 2022:

For designing the sample for HIES 2022, two different target variables/indicators were used. These are: (i) Prevalence rate of the main indicator (poverty head count ratio) (ii) Nominal household consumption expenditure. These were considered as the core indicators of HIES. Using both the indicators, rough calculation showed that about 900 households or 45 PSU's (as 20 households were selected in each PSU) for each domain (division by rural & urban) were required to provide a reasonably precise estimate at domain level.

METRIC SYSTEM OF WEIGHTS AND MEASURES

Bangladesh has adopted metric system of weights and measures from 1.7.1982.
