Foreword

The Building Materials Price Index (BMPI) is defined as a measure of the relative change in retail prices of building materials used in the construction process by monitoring the material costs for the selected building types. Bangladesh Bureau of Statistics (BBS), the national statistical organization (NSO) of the country has been producing and publishing the BMPI since 1974 on a regular basis. The base index of the existing BMPI (1998-99=100) is outdated and therefore it may not be adequate for policy formulation and decision making as well as to satisfy the user's need. With this background, BBS planned to revise and rebase the existing BMPI with 2021-22 as the new base index. This handbook attempts to present detailed information on the building materials and provides information based on a larger data set than in the past. I hope that planners, researchers, policymakers and development partners will find this document of great use.

I take the opportunity to thank and express my gratitude to Dr. Shahnaz Arefin, ndc, Secretary, Statistics and Informatics Division, for her continuous support and guidance in bringing out this handbook in time.

Also my sincere thanks and gratitude due to Mr. Ziauddin Ahmed, Director, National Accounting Wing and Project Director, Improvement of GDP Compilation and Rebasing of Indices Project, Mr. Md. Rafiqul Islam, Joint Director, Mr. Mohiuddin Ahmed, Deputy Director, Mr. Md. Nazmul Hoque, Deputy Director and Deputy Project Director, Mr. Shapon Kumar, Statistical Officer and all concerned officials of National Accounting Wing, for their hard work towards the successful implementation of this robust task.

Preface

The Bangladesh Bureau of Statistics (BBS), as the national statistical organization (NSO), has been engaged in collecting, collating, and disseminating statistics on a wide range of economic, social, demographic, and environmental variables. It brings out various regular reports and reports for the dissemination of generated data. Now some new items have arisen and some old items are obsolete. As a result, the classifications of building materials, labour charges, and transport charges have changed over time. Moreover, the base year 1998-99=100 of the existing BMPI compiled by BBS is outdated, which does not reflect the appropriate situation. To overcome this problem, BBS has revised and rebased the Building Materials Price Index (BMPI) from 1998-99=100 to 2021-22=100.

I would like to express my sincere thanks and deep sense of gratitude to Dr. Shahnaz Arefin, ndc, Secretary, Statistics and Informatics Division (SID), and Mr. Md. Matiar Rahman, Director General, Bangladesh Bureau of Statistics (BBS), who provided counsel and advice from its inception. Their experience of varying backgrounds, interest in, and knowledge of the subject is an important asset for us, and I thankfully acknowledge that their experience and knowledge helped greatly to shape this handbook in a methodological and timely fashion.

My great appreciation is due to Mr. Mohammad Abdul Kadir Miah, former project director, Mr. Md. Rafiqul Islam, Joint Director, National Accounting Wing; Mr. Mohiuddin Ahmed, Deputy Director; Mr. Md. Nazmul Hoque, Deputy Director and Deputy Project Director; Mr. Mohammad Eunoush, Deputy Director; Mr. Shapon Kumar, Statistical Officer; and Mr. Mahbobur Rahman, Statistical Investigator, National Accounting Wing, BBS, for their relentless efforts to make the work on revision and rebasing of BMPI a success.

Finally, it is the respondents that I sincerely thank for their responsiveness. This document wouldn't have completed if they hadn't helped us.

I believe that there is always room for improvement, and, as a result, I welcome feedback and suggestions to further enhance this handbook.

July 2023

Ziauddin Ahmed
Project Director

Chapter-1

Introduction

1.1 Background

The building material price index (BMPI) is a base-weighted index designed to track changes in the prices of a few key commodities used in the building construction sector over time. It is also to be noted that like any other commodity, building material prices are generally influenced by the prevailing supply and demand situation. Customers and builders generally tend to shift their preferences for items which are available more cheaply. The BMPI always have to have a base year. Due to changes in construction type and structure, the current BMPI 1998-99 = 100, was too old to accurately reflect building materials price changes. Therefore, there was a dire need to implement a new BMPI with a relatively new base year. This new index may reflect the current cost of building materials and provide a more reliable indicator of the construction industries performance. It is worth noting that the construction sector accounts for around 7.00% of GDP, of which the construction of buildings constitutes a significant part. The rebasing of BMPI entails replacing the old base year with a more recent base year. Clearly the types of buildings, building materials used and their relative prices are changing over time. On the other hand, as a result of continuous development and innovation, many new types of building materials have entered the market, and many types of building materials are not expected to fade away. These new materials offer a range of benefits, such as improved energy efficiency, better thermal insulation, and reduced environmental impacts. As technology advances, it is likely that even more innovative building materials will be developed. The last BMPI revision and rebasing was done with the base year 1998–99, and therefore it was absolutely necessary to rebase and revise the BMPI.

Considering the above views, the Bangladesh Bureau of Statistics (BBS) felt that rebasing the BMPI to 2021-22 would meet user needs. The BBS then proposed a new base year for the BMPI. The new base year was set to align the BMPI with user needs by providing more accurate and timely data. The BBS also implemented several changes to the methodology of the BMPI to make it more reliable and valid.

1.2 Historical background of BMPI:

After World War II, the need to monitor construction material prices has arisen because of an increase in global construction. The importance of monitoring fluctuations in prices to assess economic impacts and develop infrastructure plans has been recognized by both other governments and organizations. Governments and organizations recognize that price fluctuations play an important role in assessing the effect on the economy and developing infrastructure plans. In the Indian subcontinent, India started compiling the Wholesale Price Index (WPI) for construction materials in 1970. The WPI for Construction Materials is a sub-index of the broader Wholesale Price Index, which measures changes in the average price levels of a basket of goods traded in bulk by whole sales. Pakistan started compiling the Construction Input Price Index (CIPI) in 2015. In Bangladesh, BBS has been producing and publishing the BMPI and inflation rate on a regular basis since 1974, with 1969–70 as the base year. The rebasing and revision of the BMPI basket and the weight of the BMPI basket have been updated at 1998–99 = 100 and 2021–22 = 100, respectively. Currently, the base/reference index 2021–22=100 is used for the calculation of BMPI and its percentage (%) change in Bangladesh.

Purpose of revision and rebasing: The main purpose of rebasing and revision is to provide a more representative estimate of BMPI as well as its percentage change. Moreover, rebasing and revision are done due to:

- ✓ Structural changes in building construction;
- ✓ The launch of new products and materials used in building construction;
- ✓ Disappearance of products and materials used in building construction due to obsolescence
- ✓ Offers an opportunity to update basket, market and outlets
- ✓ Implementation of updated methodology (index calculation formula)
- ✓ The price schedules are updated on the basis of new basket

Chapter-2

Concepts and definitions

Aggregation: The process of combining, or adding, different sets of transactions to obtain larger sets of transactions. The larger set is described as having a higher level of aggregation depending on the intended scope of the BMPI.

Basket: A specified set of goods and services and their quantities. In a BMPI context, the set may comprise with the occupations of three broad economic sectors like Agriculture, Industry and Service.

Building Materials Price Index (BMPI): BMPI reflects the average price change over time of a specified set of building construction related items/materials and services representing a given group of population.

Carry forward: A situation in which a missing wage in some period is imputed as being equal to the last price observed for that item.

Cut-off sampling: A sampling procedure in which a predetermined threshold is established with all units in the universe at or above the threshold being included in the sample, and all units below the threshold being excluded. The threshold is usually specified in terms of the size of some relevant variable, the largest sampling units being included, and the rest given a zero chance of inclusion.

Editing: It is the process of scrutinizing and checking the wage reported by data collectors. Some checks may be carried out by computers using statistical programs written for the purpose.

Elementary aggregate: The lowest level of groups of goods or services for which occupation weights are assigned and held constant for a period of one year or more. An elementary aggregate should consist of relatively homogeneous set of wages, with similar end-uses and similar expected wage movements. More detailed weights to reflect the relative importance of individual wage observations within elementary aggregates may be applied and updated more

frequently. The elementary aggregates are the building blocks for the calculation of the higher-level indices.

Index reference period: The period for which the value of the index is set equal to 100. It should be noted that, in practice, the duration of the weight reference period for a BMPI is typically a year, or even two or more years, whereas the WRI is calculated monthly or quarterly, the duration of the wage reference period being a month, quarter, or year. The weight and wage reference periods seldom coincide in practice, at least when a WRI is first calculated, although the wage and index reference periods frequently coincide.

Jevons price index: An elementary price index defined as the unweighted geometric average of the sample price relatives.

Outlier: A term that is generally used to describe any extreme value in a set of survey data. In a WRI context, it is used for an extreme value of wage or wage relative that requires further investigation or that has been verified as being correct.

Price reference period: The period that provides the prices to which the prices in other periods are compared. The prices of the price reference period appear in the denominators of the price relatives, or price ratios, used to calculate the index. The price reference period is typically designated as period.

Price relative: The ratio of the price of a variety in one period to the price of that same variety in some other period.

Purchaser's price: The purchaser's price is the amount paid by the purchaser, excluding any value added tax (VAT) or similar tax deductible by the purchaser, in order to take delivery of a unit of a good or service at the time and place required by the purchaser. The purchaser's price of a good includes any transport charges paid separately by the purchaser to take delivery at the required time and place.

Quality adjustment: An adjustment to the price of a variety of which the characteristics have changed over time. Quality adjustments are designed to remove the part of the observed price that is due to differences in the price determining characteristics. In a BMPI context, the adjustment is needed when the price of a replacement variety must be compared with the price of the variety it replaces. In practice, the required adjustment can only be estimated.

Rebasing: Rebasing refers to changing the weight reference period, wage reference period, and index reference period. The weight reference period, wage reference period, and index reference period may be changed separately or at the same time.

Representative variety: A variety, or category of varieties, that accounts for a significant proportion of the total occupation within an elementary aggregate, and/or for which the average wage change is expected to be close to the average for all varieties within the aggregate

Sample augmentation: Maintaining and adding to the sample of outlets, items, and varieties in the survey panel to ensure that they continue to be representative of the population of outlets. A fixed sample of outlets tends to be depleted over time, as outlets cease trading or stop responding. Including new outlets also tends to facilitate the inclusion of new products in the BMPI

Specification: A description or list of the characteristics that can be used to identify an individual sampled variety to be priced. A tight specification is a fairly precise description of an item intended to narrow the range of varieties from which a price collector might choose, possibly reducing it to a unique variety, such as a particular brand of television set identified by a specific code number. A loose specification is a generic description of a range of items that allows the price collector some discretion as to which particular variety or model to select for pricing.

Substitution: The replacement of products by substitutes, typically in response to changes in relative prices. Rational utility-maximizing consumers, as price takers, typically react to changes in relative prices by reducing, at least marginally, their consumption of goods and services that have become relatively dearer and increasing their consumption of substitutes that have become relatively cheaper. Substitution results in a negative correlation between the quantity and price relatives.

Superlative index: A type of index formula that can be expected to approximate to the cost-of-living index. An index is said to be exact when it equals the true cost of living index for consumers whose preferences can be represented by a particular functional form.

Chapter-3

Methodology

During compilation of rebased (base/reference index 2021-22=100) of BMPI, Consumer Price Index Manual: Concepts and Methods (2020), IMF was followed. This Manual was approved by the UN Statistical Commission's 51st Session, and called upon all countries to apply it for compiling their national price indexes. BBS has also been assisted by the IMF with technical assistance and advice through SARTTAC.

Classification Used:

BBS had been following 03 board groups at both previous and present revision and rebasing of BMPI basket where 03 groups are:

1. **Building Materials Price;**
2. **Transport Charges;**
3. **Labour Charges;**

Aggregation Procedure: BMPI's are calculated for only National Level;

Price Data Collection Procedure:

During compilation of BMPI according to both base/reference index 1998-99=100 & revision and rebasing BMPI (Base/reference index 2021-22=100), BBS collected price data from 66 (01 from each district and 02 from Dhaka city corporation) markets across the country. BBS collected prices from 66 markets (01 from each district and 02 from the Dhaka City Corporation markets) throughout the country during the compilation of the BMPI according to both the base reference index 1998-99=100 and the revision and rebasing of the base reference index 2021-22=100.

Three quotations (prices) are collected for each item from each of the markets. Prices of BMPI are 107 items (Variety 133) being collecting using unique schedule. Data are usually collected from selected shops/places in each market or selected units or service providers in case of services. In constructing price indices, the average price for each item is considered.

a. Outlets:

- i) Each Market has 03 regular outlets and 01 outlet is kept as reserved.
- ii) Three prices are collected for every variety included in BMPI basket from three outlets of every market.

b. BMPI Compilation Timeline: For compilation of BMPI;

- i) **Price collection period:** 11 to 19 of each month
- ii) **Receiving data from field:** 20 of each month
- iii) **Editing and validation check:** 21 to 28 of each month
- iv) **Index Calculation:** 29 to 30 of each month
- v) **Approval:** First week of next month

c. Index Basket with Weights in Major Groups at National Level:

In computation of rebased (base/reference index 2021-22=100) BMPI's building/construction materials and services in the basket were determined based on Construction survey 2013-14. Weight comparison in major groups between 1998-99=100 and 2012-13=100 is shown below;

Groups	Weight	
	1998-99=100	2012-13=100
1. Building Materials item	76.89	74.30
2. Transport Charges	2.83	2.80
3. Labour Charges	20.28	22.90
Total	100.00	100.00

Note: Weight derived from Construction Survey 2013-14 of Base/reference Index 2021-22=100.

Graphical exhibition of the above table is given below;

Weight comparison between 1998-99=100 and 2012-13=100

Graph shows that Building materials items weight drops from 76.89% to 74.30%. On the other hand, labour charges weight increased from 20.28% to 22.90% at the same period. Transport charges weight remain almost same from 1998-99 to 2012-13.

d. Distribution of Weights in Sector wise at National:

No	Group/Subgroup of Items	National (Weight)
		100.00
1.	Group-1 Building Materials	74.30
	Bricks & Stone	15.81
	Cement & Sands	14.03
	Iron & Steel	18.25
	Wood & Bamboo	6.16
	Materials Rent/Others	1.61
	Tiles	3.06

No	Group/Subgroup of Items	National (Weight)
	Paint & Varnishes	2.14
	Glass & Sanitary Fittings	7.70
	GI & PVC Pipes	1.81
	Hardware & Electrical Fittings	3.73
2.	Group-2	22.90
	Wages & Service Charge	22.90
3.	Group-3	2.80
	Transport	2.80

e. Index computation:

Like many countries BBS had been using Laspeyre's formula for computation of BMPI till FY 2021-22 and base/reference index was 1998-99=100. However, A true Laspeyres index uses quantity data which relate to exactly the same period as the price reference period. In practice, this is difficult to obtain and rarely the case. Most NSOs including BBS have a price reference period which is later than the period to which the quantity data or weights relate. Also, the weights usually will span, say, a year rather than a month (or quarter). The mathematical form of Laspeyre's formula is:

$$I = \frac{\sum \frac{P_n}{P_o} \times W_i}{\sum W_i} \times 100$$

Where, I = Building Materials Price Index (BMPI)

P_n = Price in the current year/month

P_o = Price in the base year/month

W_i = Weight at the i-th item

$\sum W_i$ = Weight of the group

While In rebased BMPI (base/reference index 2021-22=100), BMPIs are calculated in two stages. First, elementary indexes are calculated for each of the elementary aggregates. Second, higher-level indexes are calculated by taking weighted averages of the elementary price indexes.

Elementary Indexes: With the updated or rebased BMPI, elementary indexes has compiled using the Jevons formula. Consumer Price Index Manual, 2020 notes that geometric averaging is preferred when weights are not available for the individual prices in the BMPI elementary indexes. The geometric price index, known as the Jevons price index, is calculated either as the ratio of the geometric average prices or as the geometric average of the price relatives. In the case of the BBS, the Jevons price index is defined as the ratio of the unweighted geometric mean prices, for the two periods, 0 and t, to be compared:

$$I_J^{0:t} = \frac{\prod (p_i^t)^{\frac{1}{n}}}{\prod (p_i^0)^{\frac{1}{n}}}$$

The Jevons index can measure long-term price change directly or by chaining together short-term price changes. The direct Jevons, illustrated in the formula above, calculates long-term price change each period by comparing the average price of the item in the current period (t) with the average price of the item in the reference period (0). With the chained Jevons, long-term price change is calculated by chaining together short-term (month to month) price changes. The formula for the chained Jevons is as follows:

$$I_{Jc}^{0:t} = \prod \left(\frac{p_i^t}{p_i^0} \right)^{\frac{1}{n}} = \frac{\prod (p_i^1)^{\frac{1}{n}}}{\prod (p_i^0)^{\frac{1}{n}}} \frac{\prod (p_i^2)^{\frac{1}{n}}}{\prod (p_i^1)^{\frac{1}{n}}} \cdots \frac{\prod (p_i^t)^{\frac{1}{n}}}{\prod (p_i^{t-1})^{\frac{1}{n}}} = \frac{\prod (p_i^t)^{\frac{1}{n}}}{\prod (p_i^0)^{\frac{1}{n}}} = \prod \left(\frac{p_i^t}{p_i^0} \right)^{\frac{1}{n}}$$

Higher-level indexes: By keeping the expenditure shares constant from the weight reference period to the price reference period, the underlying quantities are assumed to vary in response to changes in relative prices. If households tend to keep constant expenditure shares by substituting from construction items with relative price increases to construction items with relative price decreases, the period b expenditure shares will be good estimates of the expenditure shares in the price reference period when the weights are introduced in the index. The formula for the Young index is:

$$I_Y^{0:t} = \sum w_i^b \cdot \left(\frac{p_i^t}{p_i^0} \right), w_i^b = \frac{p_i^b \cdot q_i^b}{\sum p_i^b \cdot q_i^b}$$

Where w_i^b refers to the weight of the item in the weight reference period and p_i^0 refers to the reference price observed for variety i.

The BMPI measures the relative change in prices across time. Long-term price change can be measured either directly or by chaining together short-term price change. Both produce the same results. A Young index calculated by chaining short-term price relatives to form long-term price change is known as the Modified Young formula. The Modified Young (short-term formula) is preferred over the Direct (or long-term) Young formula because it is more flexible. The formula for the Modified Young is:

$$I_{MY}^{0:t} = \sum w_j^b I_j^{0:t-1} I_j^{t-1:t}, \quad \sum w_j^b = 1$$

f. Percentage (%) change of BMPI: Percentage (%) change of BMPI is calculated using the following formula:

$$\text{Pc BMPI} = \frac{I_2 - I_1}{I_1} \times 100$$

Where,

Pc BMPI = Percentage (%) change of BMPI

I₂= BMPI in the current year/month

I₁= BMPI in the previous year/month

Reason for Shifting from Laspeyre's formula to Jevons formula and Modified Young formula: Previously, rebasing and revision activities of the BMPI of BBS have been done as base index or base year 1969-70 = 100 and 1998-99 = 100 respectively. During these rebasing and revision activities of BMPI, Laspeyre's formula is used. By this time, "Consumer Price Index Manual: Concepts and Methods (2020)" was prepared under the auspices of the Inter-secretariat Working Group on Price Statistics (IWGPS), which consists of six organizations: the Statistical Office of the European Union (Eurostat), the International Labour Organization (ILO), the International Monetary Fund (IMF), the Organisation for Economic Co-operation and Development (OECD), the United Nations Economic Commission for Europe (UNECE), and the World Bank. The Manual is published jointly by the six organizations.

During the 51st Session of the United Nations Statistical Commission endorsed this Manual as an international statistical standard on March 4, 2020 and urged all countries to use this Manual in the compilation of their national price indexes. Jevons formula as well as Modified Young formula are suggested in this Manual for country's price index compilation. Moreover, the superiority of using these formula over Laspeyres are as follows:

- ❖ One of the basic assumptions to use the Laspeyre's formula is that weight and price reference period must be exactly the same period. In practice, this is difficult to obtain and rarely possible.
- ❖ From construction survey only item's level (for example: stone chips, white cement etc.) expenditure weights are available. Though, for BMPI price of the various construction materials at variety (for example: stone chips (local) stone chips (imported), bolder etc.) level are collected and geometric mean uses as proxy weight of these construction materials. This is nothing but a Jevons formula.
- ❖ The Modified Young (short-term formula) is more flexible in formulation of weights where each short-term price relatives (current period price compared with previous period price) by its previous expenditure share (weight in previous period) is considered. Thus, providing a better representation of the dynamic nature of the

weighting structure. Therefore, as soon as the construction survey data are finalized, the updated weights can be replaced; no rebasing is required at all.

- ❖ The short-term formulation facilitates the introduction of new transactions in Basket without having to impute base period prices. When two successive prices for the replacement transaction are available, it can be used in place of the transaction that is no longer available. That will enable BBS to avoid a long wait for the revision of the BMPI.
- ❖ In case of missing value, the short-term price change of similar items can be used (as opposed to long-term price changes) for purposes of imputation.
- ❖ Another advantage of the short-term formulation is that it is much easier to deal with quality changes and data validation as the short-term change in price identifies extreme price movement.

Finally, based on the newly adopted methodology, BBS can retain this base index (2021-22=100) long time as the price relatives are available and new transactions can be included in basket and expenditure weights are incorporated when and as required (the base index number is nothing but an arbitrary number). Eventually, this will enable BBS to avoid a long waiting and taking project for the rebase and revision of the BMPI.

দরছক পূরণ সংক্রান্ত নির্দেশনা অপর পৃষ্ঠায় দেখুন

নির্দেশনা

(প্রতি মাসের প্রাইস ডাটা সংগ্রহের পূর্বে এ নির্দেশনা ভালোভাবে পড়তে হবে)

- ১। নির্ধারিত হাট-বাজার/মার্কেট হতে প্রতিমাসের ১১ থেকে ১৯ তারিখের মধ্যে তথ্য-উপাত্ত সংগ্রহ এবং যাচাই করে পূরণকৃত দরহকের সফটকপি নির্ধারিত ই-মেইলে এবং হার্ডকপি জরুরি ডাকে/কুরিয়ারে/লোক মারফত মাসের ২০ তারিখের মধ্যে প্রকল্প কার্যালয়ে/ ন্যাশনাল একাউন্টিং উইং এর মূল্য ও মজুরি শাখায় প্রেরণ করতে হবে।
- ২। মূল্যসংগ্রহের নিমিত্ত নির্দিষ্ট দোকানসমূহের যে তালিকা আছে তদানুযায়ী দর সংগ্রহ করতে হবে। কোন কারণে নির্দিষ্ট দোকান বন্ধ থাকলে বা কোন আইটেম ঐ দোকানে পাওয়া না গেলে নির্দিষ্ট সংরক্ষিত দোকান হতে দর সংগ্রহ করতে হবে।
- ৩। নির্ধারিত হাট-বাজার/মার্কেটে কোন আইটেম পাওয়া না গেলে কাছাকাছি অবস্থিত হাট-বাজার/মার্কেটে, কাছাকাছি হাট-বাজার/মার্কেটে পাওয়া না গেলে দূরবর্তী হাট-বাজার/মার্কেটে অথবা সমগ্র জেলা হতে তথ্য-উপাত্ত সংগ্রহ করতে হবে।
- ৪। আইটেম এর নির্ধারিত বিবরণ (স্পেসিফিকেশন) ও একক অনুযায়ী দর সংগ্রহ করতে হবে। নির্ধারিত স্পেসিফিকেশন ও একক অনুযায়ী কোন দ্রব্য/সেবা পাওয়া না গেলে এর পরিবর্তে সমমানের/কাছাকাছি ধরনের/এককের দ্রব্য/সেবার দর সংগ্রহ করতে হবে এবং মন্তব্যের ঘরে অবশ্যই প্রয়োজনীয় তথ্য সন্নিবেশিত করতে হবে।
- ৫। বাজার দর বাংলাদেশী টাকায় পূর্ণ সংখ্যায় ইংরেজিতে লিখতে হবে, যথা: 3, 60, 100, 1050 ইত্যাদি।
- ৬। যে দরে প্রকৃতপক্ষে দ্রব্য/সেবা বেচাকেনা হয় সে দরেই লিপিবদ্ধ করতে হবে। সন্দেহজনক ক্ষেত্রে কিছুক্ষণ দাঁড়িয়ে বেচাকেনা পর্যবেক্ষণ করতে হবে অথবা কয়েকটি দোকান যাচাই করে দেখতে হবে।
- ৭। দর সংগ্রহকারীগণকে লক্ষ্য রাখতে হবে, তাঁর ব্যবহারে দোকানী যেন ভীত বা বিরক্তবোধ না করেন। দোকানী কোন প্রশ্ন করলে অমায়িকভাবে তাকে বিষয়টি বুঝিয়ে দিতে হবে। **অভিজ্ঞতায় দেখা গিয়েছে, দর সংগ্রহের কাজে দোকানীর ইচ্ছাকৃত সহযোগিতাই সবচেয়ে বেশি ফলপ্রসূ হয়ে থাকে।**
- ৮। উপরিউক্ত নির্দেশনার বাইরে অন্য কোন সাম্প্রতিক নির্দেশনা রয়েছে কিনা তা সংশ্লিষ্ট সুপারভাইজিং কর্মকর্তার (যুগ্মপরিচালক/উপপরিচালক) নিকট থেকে জেনে নিতে হবে।
- ৯। দর সংগ্রহের কাজে কোন অসুবিধার সম্মুখীন হলে জেলার দায়িত্বরত উপপরিচালক/বিভাগীয় যুগ্মপরিচালক/প্রধান কার্যালয়ে/ প্রকল্পের/ন্যাশনাল একাউন্টিং উইং এর সংশ্লিষ্ট কর্মকর্তা (গণের) সাথে যোগাযোগ করতে হবে।
