BFIDC AT A GLANCE

Bangladesh forest industries development corporation is a state-owned commercial organization under the control of the ministry of environment, forest and climate change. The present bangladesh forest industries development corporation (BFIDC) was established by ordinance no. 67 issued on 3 october 1959. It is one of the oldest state owned organizations in the country. Its head office is located in its own building at 73, motijheel commercial area. The journey of BFIDC started in 1960-61 with wood (log) extraction project at kaptai. According to the government decision in 1961-62, the rubber cultivation and development activities of the country were entrusted to the corporation from the forest department.

At present 08 (eight) industrial units under the corporation are located in dhaka, chattogram, kaptai and sreemangal. After extracting the mature wood from the forest of chattogram, chattogram hill tracts and the rubber plantations located in different rubber zones, mature rubber wood that has lost its economic life cycle is scientifically treated and seasoned in its own factory under the supervision of experienced wood technologists. It has been playing an important role in national development activities by supplying modern furniture to government, semi-government and autonomous institutions by manufacturing doors, windows, frames and railings. 01 (one) year after sales service of the furniture supplied to the buyer company.

As a government commercial organization, according to rule 74 direct procurement method (DPM) and section 76 (1) of the public procurement rules (PPR) 2008, there is no requirement for tender or quotation to procure any kind of products manufactured by the bangladesh forest industries development corporation (BFIDC).

Furthermore, in line with the decision adopted in ECNEC meeting held on march 16, 2010, regarding the purchase of products produced by government institutions on a priority basis, it has been mandated that:

"henceforth, all government procurements must give priority to the purchase of goods produced by government institutions. If the required goods are not available from government institutions, only then may they be procured from external sources."

Governance system:

The corporation is governed by a board consisting of a chairman of the rank of additional secretary to the government and three directors of the rank of joint secretary to the government. The chairman, by virtue of position, serves as the president of the board.

Vision:

Production and marketing of eco-friendly, sustainable natural rubber and wood-based products.

Mission:

To produce natural rubber and smart wood-based products for domestic and international markets through research, modern and appropriate technologies, and innovation.

Objectives:

- Harvesting of rubber tree logs that have lost their life cycle from BFIDC and logs from the forest Department.
- Commercial rubber cultivation, production, processing, and marketing on lands allocated by the forest department.
- Establishment of industrial units to ensure the commercial and optimum utilization of forest resources.
- Enhancing quality and durability of harvested timber through sawing, treatment, and seasoning.
- Commercial production and supply of modern furniture and wooden products.
- Creating employment opportunities in hilly and remote rural areas.

Goals:

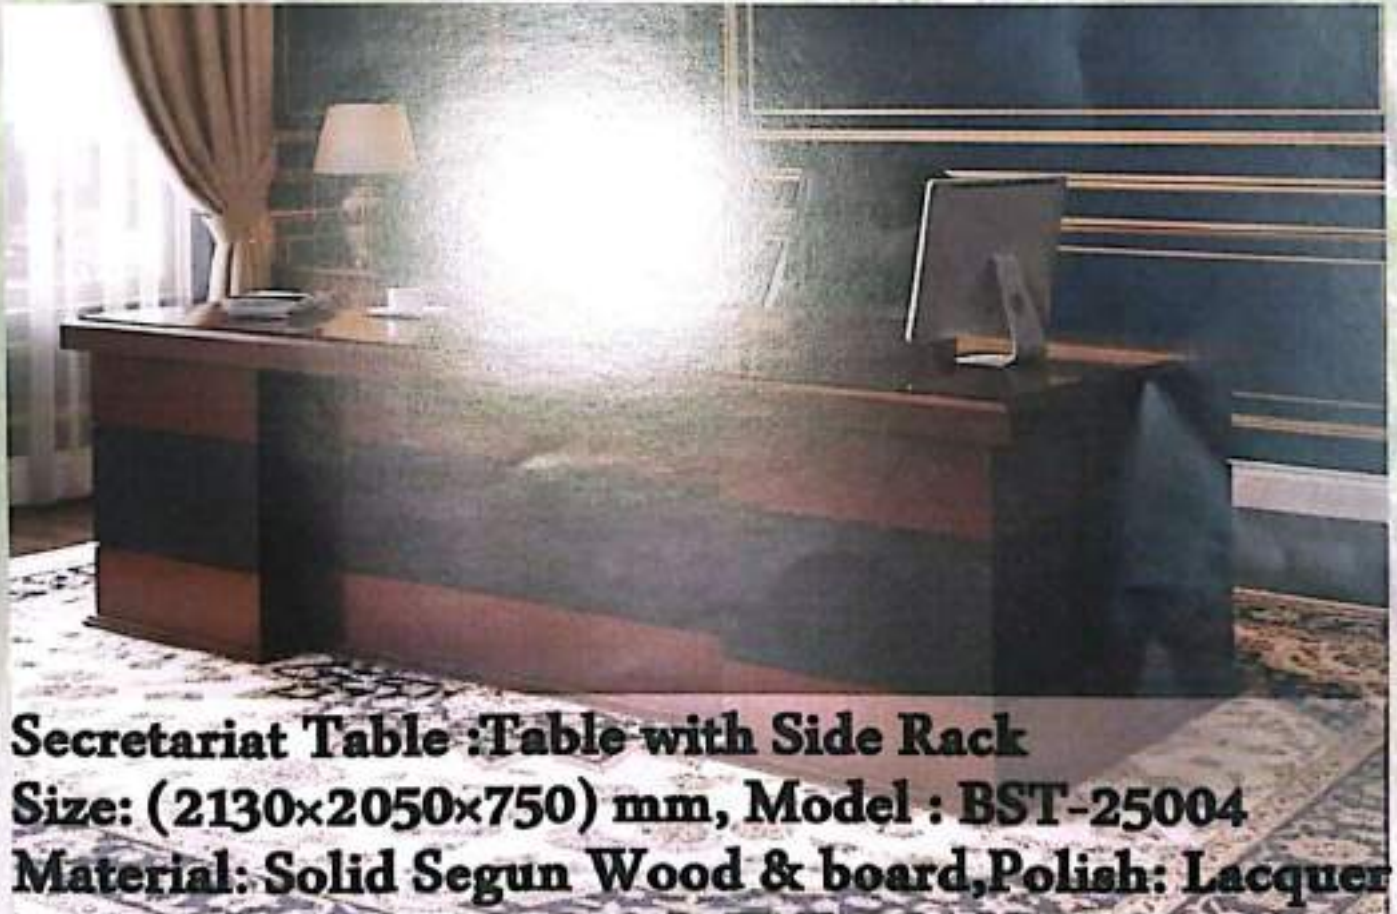

- Maximizing the use of forest resources through the establishment of industrial enterprises.
- Establishment of successful, sustainable, and commercially viable rubber plantations on less fertile, degraded hills, highlands, and slopes to prevent soil erosion.
- Poverty alleviation and improvement of living standards by creating employment opportunities in remote areas.
- Reduction of global warming through carbon sequestration.
- Saving foreign currency by producing and marketing natural raw rubber domestically.

INDEX
