EDITOR'S NOTE

I am happy to forward the 28th volume of the Bangladesh Journal of Sugarcane. The volume contains problem oriented research results and recommendations to overcome constraints of sugarcane cultivation in the country.

On behalf of the editorial board, this is my privilege to thank the contributors of 28th volume of the Bangladesh Journal of Sugarcane for their interest and continued support to the Journal. I strongly believe that Bangladesh Journal of Sugarcane is an ideal journal for the enthusiastic scientists working on sugarcane and auxiliary sugar crops, progressive farmers and policy makers. It is our expectation that in future, submission of articles will be regular and help to publish next volumes in time.

It may be noted that we are interested in bringing out some changes to accommodate quality review papers and research results on allied sugar crops.

I believe that the articles of the volume would help minimize farmers' field oriented problems. This will benefit the farmers and other ultimate users by increasing the yield of cane and sugar and will also enhance productivity in achieving self-sufficiency in sugar and gur production in Bangladesh.
