EDITOR'S NOTE

I am happy to forward the 31st volume of the Bangladesh Journal of Sugarcane. The volume contains problem oriented research results and recommendations to overcome constraints of sugarcane cultivation in the country as well as elsewhere in the world. The major contributions of the volume are from this institute. Authors from other organizations have also contributed singly or combinedly.

On behalf of the editorial board, I thank the contributors of 31st volume of the Bangladesh Journal of Sugarcane for their enthusiasm and continued support to the journal. Bangladesh Journal of Sugarcane is an ideal journal for the scientists working on sugarcane and auxiliary sugar crops in Bangladesh and also throughout the world.

We are interested in bringing out some positive reforms to accommodate quality reviewed papers and research results on sugar crops. Further responses from relevant scientists are also expected to enrich the journal.

I believe that the articles of the volume would help minimizing farmers field oriented sugarcane production management related problems. This is indeed to find out ways and means of ensuring that our research output is ready to face the new economic challenges. This will benefit the farmers, students, teachers, scientists and interested persons by increasing the yield of cane and sugar and will also enhance productivity in achieving self-sufficiency in sugar and gur production in Bangladesh.

The articles will create interest among other relevant scientists also. The theme of this publication will also help minimize yield gap between farmers and research Station.
