

## Vessel Traffic Management Information System (VTMIS)

**Chittagong Port is now covered by a modern Vessel Traffic Management Information System (VTMIS) to ensure maritime safety and secure navigation.** This advanced system not only enhances navigational safety but also significantly reduces the risks of piracy and theft within the Chittagong Port Authority (CPA) limits. It provides crucial support to CPA pilots, especially during periods of restricted visibility such as fog or heavy weather.

The VTMIS operates 24/7, offering continuous surveillance, rapid threat detection, and the ability to coordinate timely responses with patrol vessels. It integrates state-of-the-art technologies, including RADAR, the Automatic Identification System (AIS), CCTV surveillance, and a robust communication network.

This comprehensive system marks a major advancement in maritime safety, security, and operational efficiency, aligning fully with International Maritime Organization (IMO) standards.
