স্বাস্থ্যসেবা/সিসপ্র (স্বাস্থ্য-৬)/ ৪র্থ সেক্টর কর্মসূচি / TB-L&ASP /২০১৭/২৪৭

তারিখঃ

১ জ্যৈষ্ঠ ১৪২৪ বঙ্গাব্দ  
১৫ মে, ২০১৭ খ্রিস্টাব্দ

প্রেরক : মোঃ ইব্রাহীম খলিল  
সিনিয়র সহকারী প্রধান  
স্বাস্থ্য সেবা বিভাগ  
স্বাস্থ্য ও পরিবার কল্যাণ মন্ত্রণালয়।

প্রাপক : প্রধান হিসাব রক্ষণ কর্মকর্তা  
স্বাস্থ্য ও পরিবার কল্যাণ মন্ত্রণালয়  
সিঙ্গিএ ভবন, সেগুন বাগিচা, ঢাকা।

**বিষয়ঃ “Tuberculosis- Leprosy and AIDS/STD program(TB-L & ASP)” শীর্ষক অপারেশনাল প্ল্যানের প্রশাসনিক অনুমোদন।**

আমি নিম্নস্বাক্ষরকারী আদিষ্ট হয়ে জানাচ্ছি যে, স্বাস্থ্য ও পরিবার কল্যাণ মন্ত্রণালয়ের ৪র্থ স্বাস্থ্য, জনসংখ্যা ও পুষ্টি সেক্টর কর্মসূচি (৪র্থ এইচপিএনএসপি)-তে অর্ন্তভুক্ত স্বাস্থ্য সেবা বিভাগের আওতাধীন “Tuberculosis- Leprosy and AIDS/STD program(TB-L & ASP)” শীর্ষক অপারেশনাল প্ল্যান গত ০৪.০৫.২০১৭ তারিখে অনুষ্ঠিত HPNSP’র স্টিয়ারিং কমিটির সুপারিশক্রমে অত্র মন্ত্রণালয়ের মাননীয় মন্ত্রী কর্তৃক অনুমোদিত হয়। আলোচ্য অপারেশনাল প্ল্যানের অনুমোদিত মোট ব্যয় ১৬৫৬৫২.৭২ লক্ষ টাকা (জিওবি ২৮৪২৬.৩৯ লক্ষ টাকা ও প্রকল্প সাহায্য ১৩৭২২৬.৩৩ লক্ষ টাকা; তন্মধ্যে আরপিএ ৪৮৯৭৩.৫০ লক্ষ, ডিপিএ ৮৮২৫২.৮৩ টাকা)

০২। অপারেশনাল প্ল্যানের অনুমোদিত বাস্তবায়ন মেয়াদ জানুয়ারি ২০১৭ হতে জুন ২০২২ পর্যন্ত।

০৩। অনুমোদিত “Tuberculosis- Leprosy and AIDS/STD program (TB-L & ASP)” শীর্ষক অপারেশনাল প্ল্যান নিম্নোক্ত ষাণ্ডভিত্তিক বিভাজন অনুসারে স্বাস্থ্য সেবা বিভাগের আওতাধীন স্বাস্থ্য অধিদপ্তর কর্তৃক বাস্তবায়নের জন্য নির্দেশক্রমে প্রশাসনিক অনুমোদন জ্ঞাপন করছিঃ

(লক্ষ টাকায়)

## Operational Plan (OP)

1. **Name of the Operational Plan (OP):** Tuberculosis-Leprosy and AIDS STD Programme (TB-L & ASP)
2. **Name of the Sector Programme:** 4<sup>th</sup> Health, Population and Nutrition Sector Programme (4<sup>th</sup>HPNSP)
3. **Sponsoring Ministry:** Health Services Division, Ministry of Health and Family Welfare (MOHFW)
4. **Implementing Agency:** Directorate General of Health Services (DGHS)
5. **Implementation Period:**
  - a) Date of Commencement: January 2017
  - b) Date of Completion: June 2022

### 6. Objectives of the OP:

#### General Objectives:

Reduce the incidence of TB (all forms) by 50% by 2025 and 90% by 2035 (from 2015 baseline figure) and achieving registered prevalence of leprosy to less than 1 case per 10,000 populations and minimize the spread of HIV and the impact of AIDS on the individual, family, community, and society, working towards Ending AIDS in Bangladesh by 2030.

#### Specific Objectives:

1. To attain annual case detection of all forms of TB over 85% by 2022
2. To sustain and attain treatment success rate of at least 90% in non-MDR and 75% in MDR TB
3. To detect over 80% of the estimated MDR TB and enroll for treatment 100% of them
4. To ensure adequate support for operational research to foster innovation
5. To achieve and sustain elimination of leprosy in all the upa-zillas of the country by 2022
6. To achievement of zero-disability among the children due to leprosy by the year 2022
7. To bring people with deformity and disability due to leprosy to community morbidity management
8. To detect 90% of the estimated PLHIV through HTC by 2020 and sustained the detection to 2022
9. To ensure ART among 90% of the detected PLHIV by 2020 and sustained to 2022
10. To gain viral suppression among 90% PLHIV who are on ART by 2020 and sustained to 2022
11. To establish and strengthen coordination among different ministries/ divisions and stakeholders for effective use of resources (mobilization)

**9. DESCRIPTION: Background information, current situation and its relevance to National Policies, Sectoral Policy, SDG, Vision 2021, Five Year Plan, MTBF etc**

**Component 1-Tuberculosis programme:**

The National TB Control Programme (NTP), NTP adopted the DOTS strategy during the Fourth Population and Health Plan (1992-98) under the project "Further Development of TB and Leprosy Control Services". Ministry of Health and Family Welfare (MOHFW) implemented the Health, Population and Nutrition Sector Development Programme (HPNSDP) for a period of five years from July 2011 to June 2016, with the goal of ensuring quality and equitable health care for all citizens in Bangladesh by improving access to and utilization of health, population and nutrition services.

To improve equitable access to and utilization of quality health, nutrition and family planning services the Directorate of TB/Leprosy, DGHS is planning to submit an operational plan mid 2017-2022 as new sector wide Programme.

In all the sector Programmes tuberculosis control has been recognized as one of the priority Programmes. In 2002, DOTS services were expanded to Dhaka Metropolitan City and by 2007 the services were available throughout the country. The country introduced the Stop TB Strategy in 2006. The Programme achieved the initial target of 70% case detection rate of the new smear-positive cases in 2006 and treating successfully 85% of them in 2003 and has been maintaining over 90% treatment success since 2005.

WHO estimated the incidence, prevalence and mortality for all ages and all forms of TB in 2015 in Bangladesh to be 225 (95% CI: 146-321), 382 (95%CI: 185-647) per 100,000 and 45 (95% CI:27-68) per 100,000 population. These estimates are based on notification data together with expert opinion regarding under-notification in Bangladesh. These WHO estimates will be updated based on results from a recently completed TB prevalence survey for which preliminary results are included in this report.

**NTP Vision, Goal and Milestones:**

<b>VISION</b>	A world free of tuberculosis – zero deaths, disease and suffering due to tuberculosis
<b>GOAL</b>	End the global tuberculosis epidemic
<b>MILESTONES FOR 2025</b>	75% reduction in tuberculosis deaths (compared with 2015) 50% reduction in tuberculosis incidence rate – No affected families facing catastrophic costs due to tuberculosis

USAID is contributing to OP through Challenge TB (CTB) project which is one of the main global mechanisms of USAID for implementing TB strategy. The coverage of CTB is nationwide, covering all 7 Divisions in Bangladesh, although many specific interventions focus on the prioritized geographic areas. CTB is a technical assistance project, providing support to the NTP to strengthen its capacity to plan, implement, coordinate, supervise, monitor, and record and report. The Project objectives and sub-objectives are directly aligned with the End TB Strategy and the National Tuberculosis Control Program's (NTP's) National Strategic Plan.

### **Role of NTP as PR 1 of the Global Fund:**

NTP as principle Recipient (PR 1) is playing active role in coordinating the activities by the PR 2 (BRAC) and others NGOs (Sub recipient-SR) working across the country. As national body NTP is monitoring the field based activity through different mechanism including field visit, joint monitoring visit, coordination meeting and report review. UHC and other service centers are providing report to the NTP as per reporting cycle which is compiled and uploading to DHIS2 regularly basis. Advocacy Communication and Social Mobilization activities are mainly implementing by the PR2 (BRAC) and its partners NGOs with the guidance of NTP as PR1. Overall performance evaluation also conducted by NTP frequently.

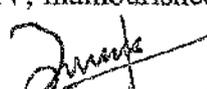

### **Social and Behavior Change Communication (SBCC) Activity**

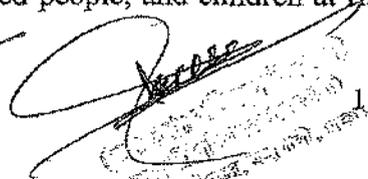

Apart from the above, other Social and Behavior Change Communication (SBCC) activities, including the ones under the USAID-supported 'SBCC Activity Project' will be conducted following the Comprehensive Social and Behavior Change Communication Strategy of MOHFW. This will include developing SBCC capacity; use of ICT to strengthen SBCC; and community engagement and awareness development through transmedia platform. All SBCC and other awareness developing interventions will be conducted in coordination and collaboration among all the relevant partners and stakeholders.

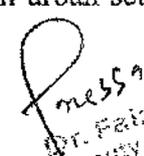

### **Active case finding/contract tracing through multipurpose volunteer**

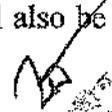

At present the total population of Bangladesh is more than 161 Million. As per WHO Global Report 2016 the incidence of all forms of TB cases is 225/lac population. So the estimated number of all forms of TB cases should be 362,495. But NTP has detected and treated total 2,22,250 cases in 2016. So about 1,40,245 number of all forms of TB cases still remain undetected. For these reason NTP is planning to start active case finding and contact tracing through multipurpose volunteer.

**Urban approach:** An urban approach would target high-risk geographic areas and populations and formulate and target interventions to address their needs. Attention will focus on defining an optimal and cost-effective package of services and the mix of public-sector, NGO, private-sector, and social network platforms for delivering them. Consideration will be also be given to strengthening urban TB Programme system components that include monitoring and supervision; financing; electronic notification, recording, and reporting; referral and follow-up; rational use of medicines; and private sector and community engagement. Because case detection and notification rates are relatively low in Bangladesh, an urban approach will emphasize effective screening and active case finding among migrant and floating populations and slum populations, people living with or at high risk of developing HIV, malnourished people, and children at risk in urban settings; attention will also be given

on developing best-practice urban-based contact tracing and isoniazid prevention therapy interventions.

The NTP with assistance from USAID and other key partners will support a detailed road map for the urban approach during 2017. Conduct a full geographic assessment and GIS mapping of the four metropolitan areas of Bangladesh (plus possibly Sylhet) that identifies (1) geographic high-transmission areas ("hot spots") and populations at risk (PLHIV, people with malnutrition, slums, factories, informal workers, etc); (2) TB screening points (clinics, pharmacies, private providers); (3) TB diagnostic centers; (4) TB treatment points; (5) NGO coverage areas; and (6) points of care of other health platforms (MCH, HIV/AIDS, nutrition, etc.)

### TB Model of care at community level

**Cross cutting issues including poverty, environment, climate change, bio-diversity, women & children, gender and person with disability/ excluded groups etc.**

1. Stewardship and governance is an issue from the national, divisional, district and upazila level that should include strengthening of Programme management through better selection, preparation and supervision of Programme personnel; stronger ownership of the Programmes by managers, service providers and health workers through their active participation in planning, implementation, evaluation with rewarding or rebuke.
2. Stronger community engagement with community based intervention with most of the detection and management of the cases in the community through Multipurpose Health Volunteers (MHV)
3. Stronger and organized referral from CC, H&FWC, UHC and district sadar hospital and back to CC
4. Multisectoral collaboration among GO, NGO and private service providers
5. To involve national and other relevant health institutes in planning, implementation and monitoring of the Programmes: NIDCH, IEDCR, NIPSOM, IPH, BITID, IDH,
6. Involvement of local gov. organizations both in the rural and urban areas: union council, upazila parishad, district council, municipality and city corporations
7. Upgrade Leprosy Control Institute & Hospital (LCI&H), Mohakhali, Dhaka as a center of excellence for Leprosy diagnosis, treatment, management of complications, standard lab facilities, prosthesis device for disabled patient, physiotherapy, training and research.
8. Management of Nutrition for TB. OP-TB-LC, NNS
9. Integration of TB MIS with routine HIS: OP-CDC & HIS-EH
10. Rehabilitations of leprosy affected deformed / disabled persons and palliative care. MOSW, OP-NCD ( Primary eye Care, reconstructive surgery)
11. NTP NLP OP have cross cutting issues with others OPs like NASP, MNCAH, ESD, CBHC, HSM, IST, PMR, and HIS-EH, HEP and PLSM-CMSD.
12. The cross cutting issues have many dimension, some are service oriented, some are related to training, some are related to IEC, while others to procurement and reporting.
13. Beyond MOHFW there are other collaborative activities with other ministries (eg. MFL, MC&LG, MPE), different Development partners, Civil Society and NGOs.

### Component 2- Leprosy program:

Bangladesh has achieved national target of <1 case of leprosy per 10,000 population in 1998, two years ahead of WHO's fixed target for leprosy endemic countries to achieve this by 2000. This was indeed a commendable success for Bangladesh. During 1991, at the time of adaptation of WHO resolution, Bangladesh was estimated to have 136,000 leprosy cases, giving a prevalence of 13.6/10,000 population. At the end of December 1998, the registered prevalence came down for the first time to less than one case per 10,000 population nationally (0.87/10,000 population). The registered prevalence is gradually declining in each year and has reached at 0.23/10,000 population by end of 2015. Though Bangladesh achieved elimination of leprosy at national level at the end of December 1998 (0.87/10,000 population), but still there was 1 district (Nilphamari) and 1 metropolitan City (Dhaka) where prevalence was more than 1/10,000 population at the end of 2015. In Bangladesh New Case detection rate was about 2.5/100,000 population at the end of the year 2015 which should be reduced to below 1/100,000 population. Though new case detection is declining through the last decade, still there remains high, medium and low leprosy burden districts posing threat of

Mohakhali, Dhaka

reemergence of the disease. According to annual leprosy report, 2015 there are thirteen (13) high leprosy burden areas in Bangladesh where newly detected leprosy cases are more than 5/100,000 population. They are Dhaka City Corporation (9.4), Bandarban (9.5), Khagrachhari (9.1), Rangamati (8.3), Gaibandha (12.1), Nilphamari (12.4), Lalmonirhat (5.3), Rangpur (9.5), Panchagar (10.4), Thakurgaon (8.9), Dinajpur (6.1), Moulvibazar (8.5) and Joypurhat (6.1). There are also nine (9) districts in Bangladesh reported newly detected leprosy cases 2 - <5 per 100,000 population. The total number of child cases detected were 166 (5.28%) in 2013 and 220 (5.53%) in 2015. Also, the Grade 2 deformity/disability rate among newly detected cases were 11.0% and 8.20% respectively in 2014 and 2015 indicating delay in diagnosis. The yearly reported cases detection is around four thousand leaving behind another four thousands remaining undetected. Planning for Leprosy in the 4<sup>th</sup> sector program should emphasize on universal access and equity in early diagnosis and prompt management of leprosy. The country has also burden of deformity and disability requiring attention for universal access to morbidity management also.

The global leprosy strategy 2016-2020 ensured increased commitment towards a further reduction of the burden of the disease and to prevent children affected by leprosy with lifelong disability. The global strategy fits universal health coverage with its focus on children, women and vulnerable populations. It also contributes to reaching Sustainable Development Goal 3 - ensure healthy lives and promote wellbeing for all at all ages by 2030. World Health Organization set a target of zero disability in children among the new cases which had been introduced by the global leprosy programme managers meeting at New Delhi, India in November, 2015. Now, National Leprosy Programme is consolidating its efforts to achieve zero-disability among the children below 15 years of age by early case detection and thereby reduction in disability.

## Component – AIDS STD Programme

### Current Situation of HIV:

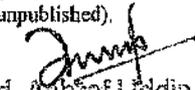

Bangladesh has so far contained the spread of HIV and consistently maintained a national HIV prevalence below 0.1 percent in the general population<sup>1</sup> and below 1 percent among key populations (KPs)<sup>2</sup>. The only KPs where a concentrated epidemic has been recorded in male PWID in Dhaka where the prevalence was 5.3% in 2011, down from 7% in 2007<sup>3</sup> and in a small group of hijra in Hili where 7.1% (2 out of 28) were HIV positive<sup>3</sup>. HIV prevalence at, or just above 1% was found among male PWID in Narayanganj (1.5%); females who use drugs in Dhaka/Tongi/Narayanganj and Benapole (1.2% and 1% respectively); and part time (casual) FSW in Hili (1.6%)<sup>3</sup>.

Surrogate markers of risk - hepatitis C (HCV) rates for unsafe injection and active syphilis for unsafe sex were measured. HCV rates among PWID varied in different geographical areas: HCV prevalence  $\geq 30\%$  was detected in 10 cities including Dhaka where the rate declined significantly over the years from 66.5% in 2000 to 39.6% in 2011 ( $p < 0.01$ ). Active syphilis at  $> 5\%$  was found in 10 cities and was highest in FSW from the streets of Hili (12.5%)<sup>3</sup>. The HIV prevalence among hijra has hovered around 1% since 2002 and there has

DHAKA

been an overall remarkable decline in active syphilis rates from 10.4% in 2002 to 2.8% in 2013<sup>4</sup>.

The first case of HIV in Bangladesh was detected in 1989 and up until December 2015 the total number of detected cases was 4,143 of whom 658 have died, leaving 3,485 known people living with HIV<sup>5</sup>. About one third of detected PLHIV are women and about 40% of cases are migrant-related (migrants and their spouses)<sup>6</sup>. However, the majority of infections are likely to remain undetected, and the total national estimate is about 9,000 PLHIV<sup>7</sup>.

Analysis of information from the HTC centres showed that between 2007 and 2013, HIV was detected in 60 out of 64 districts. However, 74% were concentrated in 12 districts: Dhaka, Sylhet, Chittagong, Comilla, Khulna, Moulavibazar, Cox's Bazar, Munshiganj, Noakhali, Narayanganj, Chandpur and Gazipur. The heaviest affected districts were Sylhet, Munshiganj, Moulavibazar, Dhaka, Khulna and Cox's Bazar.<sup>8,9</sup>

Migrants constituted between 33.3%-46.3% of annual cases, with no clear trend over time<sup>10</sup>. However an increase was seen among spouses of migrants, who constituted around 10% of detected cases since 2011. In two Divisions - Sylhet and Chittagong - more than 50% of all cases were migrant-related<sup>10</sup>. Although the number of infections is still low, Bangladesh is one of the four countries in the region where the epidemic continues to increase (UNAIDS Global Report 2012<sup>11</sup>). The geographical distribution of all HIV cases detected either through surveillance or through case detection for each KP and migrants are depicted in maps<sup>10</sup> which clearly show HIV positive KPs are mostly located in Dhaka, while migrants are scattered all over Bangladesh.

The pattern of behaviors that boost the spread of the HIV infection is well established in the Bangladesh society<sup>12</sup>. A recent study undertaken in 2011 among male injecting drug users indicated that nearly 44.2 percent of the PWID share needles and syringes. The percent of PWID-Male who visit female sex workers was estimated to 21.9 percent. Although a significant portion of the male injecting drug users reported to use condom during their last sex with sex workers; condom use with their regular partners or spouses was reported to 27.7 percent<sup>13</sup>. Moreover, selling sex to procure drugs is quite common in many parts of Bangladesh. Evidence shows that some female drug users in Bangladesh turn to sex work out of financial necessity to support their addiction<sup>14</sup>. The overlap between sex work and injecting drug use is considered to be among the most dangerous conditions for rapid spread of HIV and other Sexually Transmitted Infections (STIs) and more opportunities for

transmission to the general population<sup>15</sup>. Women who are involved in commercial sex are very often largely dependent on their partners for the procurement and use of drugs.

There are well-documented reports of risk behaviors among MSM in Bangladesh. A behavioral survey conducted in a sample of MSM in Dhaka indicated that 71 percent of MSM reported having anal sex with commercial or non-commercial male partners within the month prior to the survey, and only 26 percent reported to have used condoms during their last anal sex. Moreover, 30 percent of the respondents bought sex from female sex workers and another 46.7 percent purchased sex services from male sex workers in the last one month preceding the survey. The survey also found that nearly 17.7 percent of MSM reported at least one symptom of STI in the past one year<sup>16</sup>. Moreover, a recent behavioral survey conducted among TG/hijras in Dhaka reported that most TG/hijra (87.5 percent) had anal sex with male partners in the last month and only 19.4 percent used condom during the last sex act<sup>17</sup>.

All these risk behaviors among KPs have been contributing to the continued HIV transmission among key population groups. However, the recent mapping and size estimation of key populations (KPs) in Bangladesh<sup>18</sup> showed that the risk behaviours have been reduced among different KPs over the years. It is worth mentioning that sharing needles and syringes among male injecting drug users has reduced to 28.4% in 2015/16 from 66.3% in 2006/07. The percentage of FSWs reporting condom use during last sex act with any client has significantly increased to 87.4% among brothel based FSWs in 2015/16 as compared to 67.8% in 2006/07. Moreover, 69.1% of the hotel based FSWs reported condom use during last sex act with any client was 45.6 percent in 2006/07, which has increased to 69.1% in 2015/16. However, 69.7% of the street based FSWs in 2015/16 reported condom use during last sex with any client, which has not changed during the same period. The percent of MSM reporting use of condom during last anal sex has also increased to 45.8% in 2015/16 as compared to only 24.3% in 2006/07. Moreover, the percent of MSW reporting use of condom during last anal sex was 43.6% in 2006/07 and slightly increased to 53.6% in 2015/16. However, 67.9% of the Hijras in 2015/16 also reported condom use during last anal sex, which has not changed much during the same period. All these demonstrate the impact of the ongoing and past interventions among the key population groups.

### Measureable impact of the recent and ongoing interventions and their relevance

AIDS Epidemic Model (AEM) analysis demonstrates that the recent and ongoing interventions have averted a total of 141,225 HIV infections up to 2014 and the existing interventions have saved 3,841,000 DALYs and 19,545 lives over the past years<sup>22</sup>.

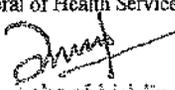

Prevention of HIV transmission from infected mothers to their unborn children is a global priority area where significant progress has been achieved in Bangladesh through UNICEF support over the past years; HIV testing and syphilis screening was initiated at the antenatal clinics of three national reference facilities and HIV prevention and treatment coverage for pregnant women has increased. The awareness building programs among young people as well as life skills education has also acted as a change agent in the lives of many young

people who have received it<sup>19</sup>. Through the school education program, community support was adequately boosted to increase gatekeepers' support towards classroom education on the use of condoms by 1.5% over three years of interventions, provided the community gatekeepers are adequately oriented on HIV prevention issues by trained teachers<sup>20</sup>.

However, if these programs to be discontinued, HIV prevalence would have exceeded 20% in most KPs within the next 20 years and a generalized epidemic would have taken off<sup>22</sup>. Findings from the Impact Assessment of harm reduction services in Dhaka through AEM showed that even in the absence of only harm reduction interventions from 1995, the prevalence of HIV among PWID in Dhaka city in 2012 was projected to reach 23.6%, compared to 5.9% with existing interventions<sup>21</sup>.

*HIV prevalence in Bangladesh if there were no interventions among KP since 2000*

These evidences emphasize the need for the continuation of the interventions among key populations and young key populations in the coming years. The AEM analysis shows that if the recent intervention programs continue, HIV prevalence among PWID and FSW will remain stable over the time. The prevalence among MSM and MSW will increase slowly and remain less than 1 percent in 2020. HIV prevalence will be gradually increasing among the hijras and will reach 2.5 percent in 2020 and there is potential for a concentrated epidemic among the hijra population over the next 20 years. Moreover, if the current intervention programs among KPs continue, the new HIV infections will be stable just over 900 between 2015 and 2020 and will be gradually increasing after that. The other indicators e.g. AIDS deaths, number on ART, etc. also demonstrate that the current interventions will be able to contain HIV epidemic in the coming years<sup>7</sup>.

**Cross cutting issues including poverty, environment, climate change, bio-diversity, women & children, gender and person with disability/ excluded groups etc.**

As in many countries in the world, social, cultural and religious norms are often used negatively which further marginalizes KPs and hinders open discussion on issues around HIV

<sup>19</sup> Govt. of Bangladesh, 2007. Improving access to life skills based sexual and reproductive health education and condom services for male youth, 2007. and SRH with young people. A National Consultation on HIV and the Law arranged by the Government and partners in May 2013, with participation from stakeholders from all sectors, including PLHIV and KPs recognized that the country has legal impediments that can hinder the smooth delivery of HIV prevention services<sup>22</sup>. Legislative, administrative, social, religious and economic factors fuel stigma and discrimination, which is also a major barrier for accessing services.

**Cross cutting issues:** For successful implementation of the OP components of NASP and also to achieve sustainable achievements, collaborative efforts among different ministries, directorate and programs would be crucial. As a result, there will be some crosscutting activities that need to be covered in different OPs. The following crosscutting approaches/activities are identified:

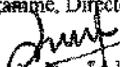

**Poverty:** In different package, KPs will be received vocation training and job placement which lead to address the poverty. Hence, KPs will link with the department of youth and sports for training and capacity building. After completion the training they have to receive microfinance in minimum interest to be a small entrepreneurs which will also address to reduce poverty.

**Environment, Climate Change and Bio-diversity:** To increase knowledge and enhance capacity of the KPs on the mentioned issues, training and awareness will be conducted with them. The contractor will develop module or brochure on the issues and arrange courtyard meeting for awareness raising.

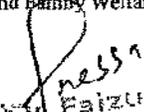

**Women and Children:** The entire package specially for people living with HIV and will be focused to the children and women. Moreover they also focused in the drug treatment and rehabilitation.

- Strengthening intersectional coordination and collaboration to deal more effectively
- the key populations;
- Ensure universal access to treatment, care and support among the key populations, which will reduce their disease burden with an impact to poverty reduction;
- Promote awareness and behavioral change strategies for key populations;
- Conduct integrated diseased surveillance;
- Manage nutrition of HIV/AIDS cases and palliative care.

## Related Strategy in the PIP:

### *To Improve Equitable Access to and Utilization of Quality Health, Nutrition and Family Planning Services*

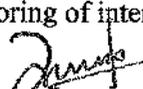

#### *Communicable Disease Control (CDC)*

There were notable achievements over the last few years in prevention and control of some of the major communicable diseases. Malaria is in pre-elimination state in nine out of the total 13 malaria endemic districts. Early diagnosis and prompt treatment in the community and prevention of exposure to vector through insecticide treated nets were the main intervention in controlling malaria in the country. There is success in TB case notification and treatment rate. However, many Multi Drug-Resistant (MDR) patients are still outside this coverage which requires to be brought under the coverage of National TB program. Leprosy cases are also in decline, although continuous efforts still require for further increase in future. Bangladesh also achieved significant progress in eliminating filariasis. By 2014, the country had achieved eliminating this disease from 18 out of 19 districts through filariasis elimination program (FEP) and started to concentrate its attention on morbidity control for those persons who had developed deformity and disfiguration. Bangladesh is on the verge of achieving elimination of Kala-azar during the 3<sup>rd</sup> Sector Program, reducing the number of cases and endemic upazilas by over 90%.

There are scopes for improvement in management and control of some other infectious diseases. Rabies was a neglected disease in Bangladesh before 2010, which has become quite prominent these days with more than two thousand annual rabies cases. Bangladesh has started the program for elimination of rabies from the country by 2020. The re-emergence of dengue in Bangladesh has established it as a public health problem especially for the growing urban population. Though the country has been able to contain mortality but transmission remains an issue of concern, especially in urban areas. Bangladesh is one of the few countries of the world that continues deworming a huge number of children, due to the prevalence of Soil Transmitted Helminthes (STH). Along with regular deworming, safe water, sanitation and hand hygiene are important components for achieving elimination of STH, which require multi-sectoral collaboration and coordination. Influenza is another infectious agents causing repeating pandemic in the country since 2009. Programs for influenza needs to include intervention for preventing and managing seasonal influenza and also prevention and control of novel influenza virus including response to impending pandemic. Also, the country needs to vaccinate the pilgrims, expatriate workers and member of peace contingents against influenza.

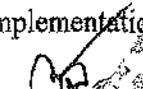

Despite economic progress, diarrhea, a preventable disease has remained as one of the leading causes of illness and death among children in Bangladesh. Limited access to safe drinking water and safe sanitation especially in slum areas and fecal contamination in water during natural disaster leads to a high prevalence of diarrheal diseases in this region. The disease has a huge impact on public health including malnutrition, under nutrition, stunting of growth as well as national economy. Development of awareness regarding personal hygiene, drinking safe water, access to improved sanitation, along with proper management can reduce incidence and severity of diarrheal episodes.

Among the emerging infectious diseases, Nipah is unique for Bangladesh, as the only country having endemicity of the disease. Consumption of raw date palm sap has been identified as the primary mode of transmission. The disease is also transmitted from man to man. It is manifested as encephalitis, ARS or as both. Awareness regarding the causes of the diseases and improvement of patient care in isolation is critical for managing the cases. Viral hepatitis is the seventh leading cause of death globally, accounting for 1.4 million deaths per year – more than HIV/AIDS, TB or malaria. In Bangladesh, more than 10 million are living with viral hepatitis and 20,000 die per year. Government is working for prevention and control of Viral Hepatitis through a series of interventions. Creation of effective national inter-sectoral task forces will be pivotal to the success of implementation and monitoring of interventions.

Deputy Director & PM  
National AIDS/STD Control Programme  
Dhaka

  
19

Typhoid fever caused by *Salmonella typhi* produces systemic infection and remains an important public health problem in Bangladesh. The country is in the region of typhoid high endemic area. Multiple factors including improper hygiene practice, exposure to unsafe water quality and sanitation, and improper food handling have a huge impact on transmission of the enteric pathogens of *S. Typhi*. In addition, emergence of single or multi-drug resistance strain of *S. Typhi* against common antibiotics for treating the disease is also potentiating clinical severity and outcome of the disease.

Bangladesh is consistently a low-prevalent country with regard to HIV/AIDS and STDs and the increase in infestation is comparatively low. However, continuation of effort in creating awareness among the high risk group, including sex workers, prison inmates and transgender (TG) people is important. The vast working class population living abroad also requires to be brought under the preventive net of the National HIV/AIDS program. At the same time, access to antiretroviral drugs among the population with advanced HIV infection requires further improvement.

Communicable diseases requires continuous attention in the context of the demographic transition, changing pattern of the diseases due to rapid urbanization and climate change and the risk behavior of the country's population. CDC has direct linkage with living conditions, poverty and other macroeconomic indicators. Effective management of communicable disease control interventions is also important for equitable delivery of ESP. So, disease control interventions for major communicable diseases in the 4<sup>th</sup> HPNSP will have direct linkage to policy and strategic documents of the Government and to larger economic goals.

The challenges remaining in this area are as follows:

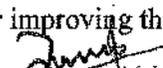

**Disease Surveillance:** A satisfactory and well-functioning disease surveillance system, which is vital for proper planning and implementation of effective CDC interventions, is yet to be achieved. Capacity of the IEDCR will need further strengthening alongwith adequate funding to take the lead role in integrated disease surveillance. Effective collaboration and coordination is required with other public and non-public institutes. Continuation and further strengthening of capacity development programs like Field Epidemiology Training Program (FETP) is required for effective CDC interventions. Behavioral and sero-data are also required to be updated regularly and made available for effective program design.

**Supply Chain Management of Drugs and other Logistics:** One of the major challenges in CDC is the interruption of logistical supplies, especially for drugs against HIV/AIDS and TB. Proper inventory and transportation is vital to prevent quality deterioration of essential CDC drugs. Supply is also required to be rationalized according to the geographic and demographic variance. HTR areas and vulnerable population are prone to major communicable diseases and hence ensuring uninterrupted supply of quality drugs and other logistics is a priority issue.

**Disease Diagnosis:** Early detection is important for management of major communicable diseases. Public diagnostic facilities are not adequate in providing investigative services for the growing population in the country. Private sector has been expanding their investment in establishing diagnostic facilities, thereby improving access to diagnostic services for the recipients. However, there are growing concerns regarding professionalism, equality of services, and commercialization in service pricing. A strong monitoring mechanism requires to be established. Establishing a system of accreditation of investigative services may improve the situation.

**Rational Usage of Drugs:** A growing concern in disease control is the irrational use of drugs, especially antibiotics, which results in increasing trends of MDR-TB, drug resistant typhoid and a few other communicable diseases in the country. Limited awareness of the patients regarding proper dosage, reliance on over the counter availability of prescription drugs and import and distribution (legal or illegal) of drugs of doubtful quality are the principal challenges in establishing continuing rational use of drugs.

Key activities to be pursued during the 4<sup>th</sup> HPNSP for overcoming the challenges described above and for improving the situation of CDC include:

  
Dr. Md. Ashraf Uddin  
Deputy Director, MDBC &  
Programme Manager TG (incharge)  
DCNS, Moshakhail, Dhaka

20

  
Dr. Faizun Nassa  
Deputy Director & PM  
National AIDS/STD Control Programme  
DCNS, Moshakhail, Dhaka

- (i). Efforts will be continued and strengthened for vector control, disease and vector surveillance, detection and management and pharmacovigilance to control vector borne communicable diseases.
- (ii). Capacity of IEDCR and other relevant entities will be strengthened for disease surveillance and increasing availability of behavioral and sero-data.
- (iii). There will be mass awareness regarding the sources, symptoms, prevention and management of major communicable diseases.
- (iv). Bangladeshi citizens working in foreign countries will be covered under the awareness campaign through innovative use of electronic media. Awareness will include the rationale usage of drugs, especially antibiotics.
- (v). Screening will be strengthened at the entry points of the country (air, sea and land ports) to detect and prevent cross-border communicable diseases
- (vi). Extent of the National AIDS/STD Program (NASP) and other communicable disease control programs will be enhanced to cover HTR and vulnerable population
- (vii). Efforts will be continued to complete the elimination state for malaria and filariasis and sustain elimination state for kala-azar through scaling up morbidity management, active case search, case-based camp approach and blanket house to house search approach.
- (viii). There will be strengthened efforts to control STH through stronger collaboration with stakeholders in ensuring proper WASH facilities and ensuring nutrition for children, continued deworming of children, through scaling up of the Little Doctors' Program for mass awareness of population, and strengthening surveillance.
- (ix). Timely procurement will be done to ensure supply of essential drugs and other logistics for prevention and control of communicable diseases. Priority will be given to HTR areas and vulnerable population.
- (x). Capacity of the public service providers will be strengthened for early detection of communicable diseases and their proper management
- (xi). Monitoring from the MOHFW on private sector entities will be strengthened to ensure effective diagnosis and proper management of communicable diseases. Collaboration will be made with professional bodies, NGOs and private sector for increasing professionalism, ensuring quality and expanding service delivery.

## 10. Priority Activities:

### Tuberculosis Program:

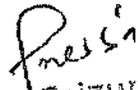

1. Replace ZN microscopy to LED microscopy by 2017 and establish new microscopy centers to ensure 150,000 population per microscopy site
2. Install at least one Gene Xpert in each upa-zila, CDC/District head quarter, and medical colleges by 2022.
3. Test all presumptive TB cases by Gene Xpert by 2022
4. Strengthen diagnostic facility of tuberculosis by x-ray
5. Implement Shorter Treatment Regimen for MDR TB in all districts by 2017
6. Implement Mandatory notification from private sector by 2017
7. Procure all 1<sup>st</sup> line drugs by 2018 from country own funding
8. Increase detection of TB in children
9. Expand TB care for high risk populations such as prisons, garment industry , slums , migratory populations
10. Strengthen the engagement of private providers in the diagnosis of TB
11. Community participation through multipurpose health volunteers for the purpose of detection.
12. Ensure uninterrupted supply of quality controlled drugs at all facilities
13. Strengthening the Supervision, Monitoring and Evaluation of activities and staff responsibilities at various program levels
14. Strengthening electronic reporting system at peripheral sites
15. Continue quarterly monitoring meeting at district level
16. Strengthen and expand operational research activities

### Leprosy Program:

1. Active case search through 'Extended Contact Survey', case detection campaign and skin camp will be conducted in high and medium leprosy burden areas for the next five years.
2. Community clinic based morbidity management and social rehabilitation of people affected by leprosy through development of strategy, action plan, guidelines and SOP; training of CHCP; mobilization of logistics and consumables and sharing with elephantiasis morbidity management in community clinics in 19 filaria endemic districts.
3. Mobilization of fund for salary, remuneration and daily wages for personnel engaged in programme management, diagnosis & management of leprosy cases, morbidity management, disease surveillance, pharmacovigilance, supervision and monitoring
4. Strengthening health information system from the national down through district, upazila and community level for quality, efficiency and equity.
5. Improving quality of Leprosy Services in Leprosy Hospitals of Dhaka, Nilphamari and Sylhet through renovation, strengthening human resources, use of guideline and SOPs and uninterrupted supply of drugs and consumables.
6. Advocacy, Communication and Social Mobilization (ACSM) from national down to district, upazila and community level through development of strategy and action plan, engagement of NGO partners, Local Government Organizations and Community Group (CG) in reducing stigma and achieving focal elimination
7. Ensure uninterrupted supply of MDT and other logistics for leprosy affected people at free of cost.
8. Strengthen and expand operational research activities

  
Dr. Md. Ashraf Uddin  
Deputy Director, MDDC &  
Programme Manager TB (incharge)  
DGHS, Mohakhali, Dhaka

22

Deputy Director & PM  
National AIDS/STD Control Programme  
DGHS, Mohakhali, Dhaka

  
STATE SECRETARY (MDDC)  
DEPARTMENT OF HEALTH SERVICES  
DGHS, MOHAKHALI, DHAKA

## AIDS STD Program

1. Detection of left Over Cases
2. STI and HIV prevention Service Package for female sex workers and their client
3. STI and HIV prevention Service Package for MSM/MSW/TG and their clients;
4. Harm reduction Service package for male and female PWID (in geographically prioritized districts) and OST;
5. HIV prevention Services for migrants population
6. Continuation of HIV text teaching through the formal and non-formal educational institutions;
7. Mass media campaign
8. Care support and treatment for the PLHIV
9. Drafting, updating and approval of the strategy, guideline, SOP and IEC material
10. Training of district and upazila level managers, field health workers, CHCP and MHV
11. Awareness in the community on HIV in terms of alleviating the stigma, promotion of health seeking behaviour for diagnosis and management of HIV
12. Referral to District HIV Testing and Counseling centers (DHTC) through Community Clinics (CC)
13. Detection of new cases among Migrants
14. Research, survey and assessment
15. Functional HIV Testing and Counseling (HTC) Center
16. One Stop HIV Management Centre

## 11. Relevant Result Frame Work Indicators (RFW) and OP Level Indicators:

### 11.1 Relevant Result Frame Work Indicators (RFW)

RESULT	INDICATOR <sup>23</sup>	MEANS OF VERIFICATION & TIMING	BASELINE & SOURCE	TARGET 2022
<b>Component 3: Quality basic services reach the disadvantaged population to progress</b>				
<b>Result 3.2 Equitable coverage of ESP ensured</b>	3.2.8 Tuberculosis case detection rate (all case)	NTP MIS, every year	53%, GTBR <sup>24</sup> 2014	75%

<sup>23</sup> Indicators in general would be stratified (where applicable) by age, gender, geographic area and wealth quintiles

<sup>24</sup> Global Tuberculosis Report 2014 by the World Health Organization (WHO)

## 11.2 OP Level Indicators:

Sl	Indicators	Unit	Baseline (Year, Source)	Projected Target	
				Middle (By June 2020)	End (By June 2022)
1	2	3	4	5	6
<b>TB-L:</b>					
1.	Notification of New TB case (all forms)	Number (NTP MIS Report)	209438 (NTP MIS Report, 2015)	2,45,000	2,55,000
2.	Enrolment of MDR patients for treatment	Number (Cumulative) Number (NTP Annual Report)	880 (2015, NTP MIS Report)	2,600	4,000
3.	Registered Prevalence of Leprosy	Rate per 10,000 population	0.23 (Source: MIS Leprosy 2015)	0.18	0.10
<b>ASP:</b>					
4.	PLHIV receiving comprehensive care and support	Percentage	53% (2015 MIS, NASP)	80%	100%

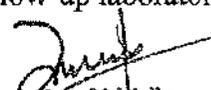

## 11.3 Source and Methodology of Data Collection to Measure/Prepare Annual Progress Report:

The methodology of data collection for TB and Leprosy are given below

Recording and reporting is generally complete and accurate. There are two different electronic systems in place for DS-TB. e-TB manager operates as a patient-based electronic system, and automatically generates the necessary aggregate reporting formats for national and lower levels (including TB forms 10, 11, and 12 ).

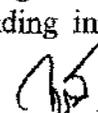

DHIS 2 has benefited from strong political commitment and is available and being used by other Programme e.g. EPI, EmOC, IMCI. For entry into this system, TB data is aggregated and TB forms 10, 11, and 12 are included in the DHIS2 set up. There is not yet a patient-based DHIS2 module for TB in Bangladesh, although discussions on this have been initiated.

For DR-TB, eTB manager is available and in use nationwide at all MDR treatment initiation centers. As with DS-TB, this is a patient-based system, but it includes a much greater level of detail reflecting the greater amount of data associated with PMDT, including initial and follow-up laboratory results, regimen changes due to side-effects, etc..

  
Dr. Md. Ashraf Uddin  
Deputy Director, MBDC &  
Programme Manager TB (incharge)  
DGHS, Mohakhali, Dhaka

  
Dr. Faizun Nassa  
Deputy Director & PM  
National AIDS/STD Control Programme  
DGHS, Mohakhali, Dhaka

  
Dr. Faizun Nassa  
Deputy Director & PM  
National AIDS/STD Control Programme  
DGHS, Mohakhali, Dhaka

  
Dr. Faizun Nassa  
Deputy Director & PM  
National AIDS/STD Control Programme  
DGHS, Mohakhali, Dhaka

A separate patient level database for TB should be maintained and e-TB manager may be an option for this but there are concerns over the ability of the two systems (e-TB manager and DHIS 2) to 'talk' to each other. Based on current NTP guidance, e-TB manager is used for management of patient data at local level and not for reporting to NTP; there are separate paper based reporting system available to report to NTP and this maintenance of parallel paper and electronic systems is a substantial drain on staff time.

The NTP and its partners have dedicated staff for conducting M&E activities at central, divisional, district, upazilla level and in urban areas. There is no specific schedule for the central team's supervision activities; however, the team is expected to visit approximately 3 to 5 districts in every division during the course of one year. The divisional TB consultants are expected to visit approximately 2 to 3 districts in every quarter, again focusing on implementation sites with poor performance shown in quarterly reports.

### ASP Programme

The following are the methodologies for collecting data for sector program during 2011-2016. However, national MIS on HIV/AIDS is currently under pilot phase which will be implemented throughout the HIV program on the basis of results of the pilot:

**DHIS2 reporting:** The program data is currently uploading six month basis in the DHIS2 which will continue in the 4<sup>th</sup> health sector program.

**Annual Report/ Survey- Surveillance:** Periodically sero and behaviour survey are planed to conduct for generating data/ information.

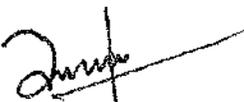

**DIC level data collection:**The outreach staff members collect data from field directly daily basis by set data collection formats.

**NGO Level:**Project Management Office/Lead NGO collects all monthly basis data from all DICs for different services.

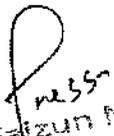

**Central level:** NASP/Management agency collects data from different Implementing consortium/NGOs monthly and quarterly basis on the progress of implementation. NASP provided with the template for monitoring reports to the implementing agencies for this purpose. NASP is also planning in a way so that there is a uniform monitoring framework across all NGOs.

**Internal Monitoring:** In addition to the above, NGOs and DIC management conduct monitoring visit and collect data on various services. This will be both individual level and joint monitoring visit. This visit will be conducted according to Quarterly M&E plan.

**External Monitoring:** Other than internal monitoring by the implementing agencies, the NASP as well as by local MOHFW Offices supervise and monitor the activities of the DIC/ project activities at different field spot.

## 16. LOG FRAME- TB

- i. Planned date of completion : June 2022
- ii. Date of summary preparation : January 2017

	Narrative summary	Objectively Verifiable Indicator	Means of verification	Important assumptions
OP Goal	Zero deaths, disease and suffering due to tuberculosis	-Incidence estimates published by WHO	WHO annual report	Supports from GF and other donors maintained and increased
OP Purpose	i. To attain annual case detection of all forms of TB over 85% by 2022 ii. To sustain and attain treatment success rate of at least 90% in non-MDR and 75% in MDR TB iii. To detect over 80% of the estimated MDR TB and enroll for treatment 100% of them	i. Annual case detection of TB increased from 57% to 85% of the estimated cases by 2022. It is expected to achieve annual case detection as follows: 2017: 230,000 2018: 245,000 2019: 265,000 2020: 280,000 ( 76% of the estimated incidence) 2021: 295,000 2022: 311,700 ( 85% of the estimated incidence)  ii. Treatment outcome for DS TB maintained over 90% and for MDR TB over 75%  iii. MDR TB case detection increased from 20% to 80%	Annual report on NTP, Quarterly report of NTP
