INTRODUCTION

As per International Health Regulation (IHR-2005), the public-health authorities at points of entry (international ports, airports, and ground crossings) are required to establish effective all hazard public health contingency plan and arrangement for response to Public Health Emergency of International Concern (PHEIC). It is also important to communicate with National IHR Focal Point on relevant public health measures. The current COVID-19 outbreak has spread across several borders and subsequently on 30th January 2020, the outbreak has been declared as a Public Health Emergency of International Concern (PHEIC) by the World Health Organization(WHO). This has prompted the demand for the detection and management of suspected cases at the points of entries (PoEs) and prevent the spread of disease in Bangladesh.

This standard operating procedure (SOP) is intended for National Focal Point and the authority for the International Health Regulation (IHR), PoE public health authority, PoE operators, conveyance operators, crew members and other stakeholders involved in the management of public health event and it should be used as a reference at all PoEs (International Airports).

PURPOSE

This SOP have been developed to screen and early detection of suspected infected persons and to take part in implementation of World Health Organization (WHO) recommendations related to Corona virus disease 2019 (COVID-19) management; and to control transmission of the disease through PoEs. This SOP describes the Preparedness and Response procedure and coordination mechanism regarding management of travellers coming from or through the designated PoEs into Bangladesh from other countries. As COVID-19 pandemic has reached almost every country and territory of the world, any traveller arriving from abroad will be considered as exposed to COVID-19 infection source.

This document provides advice on the detection and management of ill travellers suspected of COVID-19 at points of entry and on conveyances.

The following measures will be implemented in the designated points of entries.

- A. Screening of travellers at international points of entry
- B. Detection of ill travellers
- C. Interview of ill travellers
- D. Reporting of ill travellers with suspected COVID-19 infection to National IHR Focal Point and other concerned
- E. Isolation and initial case management and referral of ill travellers with suspected COVID-19
- F. Referral of ill travellers with suspected COVID-19 & close contacts to isolation/Quarantine centre

A. SCREENING OF TRAVELLERS AT INTERNATIONAL POINTS OF ENTRY

1. Exit Screening at the Departure

- At the entrance gate of the terminal building proper hand washing facilities at designated places to be provided for the travelling travellers and staffs. The facilities should be equipped with adequate liquid soap and running water and disposable tissue paper with foot operated waste bin.
- All travellers and all Civil Aviation and relevant staffs to enter with face mask and to walk through disinfection foot mats for sterilization of shoe soles. For sterilization solution 5 table spoons (1/3rd cup) bleach per gallon of water (0.5% chlorine solution) may be used.
- Body temperature of the departing travellers to be measured with Infrared handheld thermometer by the trained personnel. If any pax shows temperature more than 100° F /38° C will be sent to Airport Health department for further check-up and disposal by the on duty Medical Officer.
- At check-in counter travellers are to maintain physical distancing and they are to be provided with mask and hand sanitizer by the respective airline.

PURPOSE

This SOP have been developed to screen and early detection of suspected infected persons and to take part in implementation of World Health Organization (WHO) recommendations related to Corona virus disease 2019 (COVID-19) management; and to control transmission of the disease through PoEs. This SOP describes the Preparedness and Response procedure and coordination mechanism regarding management of travellers coming from or through the designated PoEs into Bangladesh from other countries. As COVID-19 pandemic has reached almost every country and territory of the world, any traveller arriving from abroad will be considered as exposed to COVID-19 infection source.

This document provides advice on the detection and management of ill travellers suspected of COVID-19 at points of entry and on conveyances.

The following measures will be implemented in the designated points of entries.

- A. Screening of travellers at international points of entry
- B. Detection of ill travellers
- C. Interview of ill travellers
- D. Reporting of ill travellers with suspected COVID-19 infection to National IHR Focal Point and other concerned
- E. Isolation and initial case management and referral of ill travellers with suspected COVID-19
- F. Referral of ill travellers with suspected COVID-19 & close contacts to isolation/Quarantine centre

A. SCREENING OF TRAVELLERS AT INTERNATIONAL POINTS OF ENTRY

1. Exit Screening at the Departure

- At the entrance gate of the terminal building proper hand washing facilities at designated places to be provided for the travelling travellers and staffs. The facilities should be equipped with adequate liquid soap and running water and disposable tissue paper with foot operated waste bin.
- All travellers and all Civil Aviation and relevant staffs to enter with face mask and to walk through disinfection foot mats for sterilization of shoe soles. For sterilization solution 5 table spoons (1/3rd cup) bleach per gallon of water (0.5% chlorine solution) may be used.
- Body temperature of the departing travellers to be measured with Infrared handheld thermometer by the trained personnel. If any pax shows temperature more than 100° F /38° C will be sent to Airport Health department for further check-up and disposal by the on duty Medical Officer.
- At check-in counter travellers are to maintain physical distancing and they are to be provided with mask and hand sanitizer by the respective airline.

2. During Security Check, Pre boarding, boarding and passport control

- Concerned stakeholder is to ensure physical distancing (1 meter apart from one another) of the departing travellers and hand sanitizer is to be provided as required.
- In the travellers carrying bus/car, travellers are to sit at least 1 meter apart from one another. Airlines are to ensure disinfection of the bus/car, each time after carrying travellers to the aircraft.

3. Entry Screening at the Arrival Health Desk

- All travellers arriving at Points of Entry (PoEs) will have to pass through the 'thermal scanner gate' located at the arrival terminal and will be scanned for the body temperature.
- All traveller entering Bangladesh through any PoE must fill up the 'Health Declaration Form' completely while they are inside the aircraft and must submit it after landing, at the IHR Health Desk.

- All travellers will proceed through the thermal scanner archway slowly one by one, maintaining a distance of > 1meter (3 feet) from each other. For measuring temperature Infrared handheld thermometer will be used if required.
- All the staffs should also maintain > 1-meter (3 feet) distance from each other and the travellers, at all time, and should encourage travellers to maintain more than one-meter distance between themselves.
- After check-up at the health desk, if there is no sign and symptoms and no epidemiological link to a COVID-19 case after checking the Declaration Form, the traveller/crew can proceed to immigration desk for immigration formalities.
- The health desk will fill up a registry book about information of different flights, including flight information data and number of travellers in each flight.

- Provide all travellers with a Health Information Card.
- Advice travellers to record their own temperature twice daily for 14-days and report any rise in temperature of 38°C/100°F or above or any symptom of illness described in the health information card.
- Provide all travellers with Coronavirus factsheet and leaflets in Bangla and in English

B. DETECTION OF ILL TRAVELLERS:

1. Self-reporting

Travellers who self-report their illness and found to have fever or sign symptoms of corona, should be managed following the same procedures as used for those who are screened at the IHR Health Desk with symptoms.

2. Visual observation

Ill travellers exhibiting signs suggestive of COVID-19 disease may be identified by health personnel as they pass through the entry point. The doctors/nurse wearing mask and disposable gloves (practice proper infection control measure) at the health desk identifies the traveller as a suspect with COVID-19.

3. Temperature measurement

- After disembarkation, on their way to immigration, the traveller will be passing through the thermal scanner to health desk, and it beeps if there is temperature $>100^{\circ}\text{F}/38^{\circ}\text{C}$ of any traveller.
- When travellers displaying signs of illness are detected by PoE health personnel or through temperature measurement, or when travellers experiencing symptoms comes forward to seek help from PoE health personnel, they and their travel companions will be separated away from other travellers.
- They will be escorted to a dedicated 'Health Inspection Room' at the PoE for further assessment practicing, proper preventive measures and avoid any direct contact with the traveller.
- Airline operators will provide the list of close contacts list as per seat arrangement of the suspected case(s) as soon possible. Immigration department need to provide the phone number and address of close contacts when required.
- To be vigilant for other similar suspects in line in the arrival area.

C. INTERVIEW OF ILL TRAVELLERS

1. Implementation of interview

- Interview of sick travellers to determine the possibility of symptoms of and exposure to the virus responsible for COVID-19 disease.
- Team members will wear full set PPE including medical mask (or equivalent) and face shield before entering examination room for checking the traveller for sign & symptoms and taking the traveller's temperature using no-touch thermometer technology by infrared handheld thermometer and document it and examine for other signs.

- Doctors will inquire about any other accompanying person of the suspected traveller and their physical status
- Assessing travellers for sign and symptoms suggestive of COVID-19 disease only by interviewing and observing but no physical examination will be done.
- Take travellers contact history and evaluate the answer provided in Health Declaration Form.

2. Assessing travellers for COVID-19 disease

- The following signs, symptoms and history should be assessed

Sign symptoms of illness suggestion respiratory infection

- ▶ Fever > 38°C/100°F or the traveller mentioning feeling feverish
- ▶ Dry cough
- ▶ Breathlessness or breathing difficulties

A history of possible exposure to the COVID-19 case should be evaluated including:

- ▶ Travel to a country with ongoing community transmission of the COVID-19 in last 14 days prior to onset of symptom
- ▶ Take history of his/her origin of travel including transit places
- ▶ Doctors will also check the travel documents of the traveller
- ▶ A visit to any health care facility in a country with ongoing community transmission in last 14 days prior to symptom onset
- ▶ Close physical contact during the past 14 days with a traveller suspected or confirmed to have COVID-19 infection

- After examining the traveller, safely remove the PPEs and dispose properly following the SOP for disposal.
- It is important to wear or remove PPE in the correct order, which can help to reduce cross contamination.
- Removed PPE should be placed in biohazard bag and disposed in a waste bin as infectious waste. Reusable goggles/ face shield should be disinfected (by 0.5% Chlorine solution) and dried after use.

D. REPORTING, RECORD KEEPING AND RISK COMMUNICATION ACTIVITIES

- Airport Health Officer (AHO) will update Director CDC, DGHS, Director IEDCR and Director, HSIA daily on the details of travellers, total number of travellers examined, details of the cases sent to the referral hospital including their current updates, status of the close contacts etc.
- Establish proper mechanism for data collection and analysis, e.g numbers of travellers screened and confirmed cases out of screened travellers.
- Document and register name and details of the suspected traveller and their accompanied family members or other probable exposure contacts in the register book. Inform concern authorities about the cases and contacts.
- Dissemination of risk communication messages at points of entry: This can be done through posters, leaflets, electronic bulletin, bill-board etc, aiming at raising awareness among travellers about signs and symptoms of the disease, and encouragement of health seeking behaviour, including when to seek medical care, and to share about their travel history.

E. ISOLATION AND INITIAL CASE MANAGEMENT OF ILL TRAVELLERS WITH SUSPECTED COVID-19

- Identify a medical inspection room near the PoE where ill travellers can be referred to wait for an interview. Ideally this structure should also have the capacity to isolate ill travellers who after interview are suspected of having COVID-19 disease, while they wait for being transported to a designated health care facility.
- Ensure water, food, mask, and sanitizer, tissue papers for ill travellers who are waiting at 'Health Inspection Room' for being transported to a health care facility or Quarantine centre.
- PoEs must make arrangements with Isolation /Quarantine centres, Civil Surgeons, UHFPOs and other local healthcare facilities, so travellers who are suspected of having COVID-19 infection can be promptly referred.
- Suspected traveller/close contact's baggage will be retrieved by ground handling and customs departments after performing disinfection and official procedure will be send to the designated isolation /quarantine centre.
- Complete history of the patient including symptoms, demographic and contact information and check the Health Declaration Form.

F. REFERRAL OF ILL TRAVELLERS WITH SUSPECTED COVID-19 & CLOSE CONTACTS TO ISOLATION/QUARANTINE CENTRE

1. Isolation/Quarantine Information

- All travellers (whether Bangladeshi or foreign) entering Bangladesh will be required to maintain 14-days quarantine period at dedicated facilities as per decision of MOHFW, and supported by MOFA
- If any person of Bangladesh origin possesses a “no visa required” stamp in their passport and comes to Bangladesh without the required medical certificate mentioning that they are free of COVID-19, then they will be facility quarantined for 14-days.
- Foreign nationals with valid visas will be required to produce a medical certificate (with English translation) from authentic government authority (of that country) to be obtained within 72 hours of travel, indicating that they are COVID-19 negative. This medical certificate needs to be submitted on arrival at the Bangladesh point of entry (airport/seaport/land port).
- If any person of Bangladesh origin possesses a “no visa required” stamp in their passport and comes to Bangladesh with the required medical certificate mentioning that they are COVID-19 negative, then they are required to home/self-quarantine for 14-days from the date of arrival. However, if he/she is diagnosed with any COVID-19 symptoms on arrival, he/she will be send to isolation centre for further management.
- International Health Regulation Programme (IHR-2005), National Focal Point(NFP) CDC, DGHS and National Focal Institute, IEDCR will maintain a registry of all incoming travellers in collaboration with WHO and IOM, from all affected countries to monitor for the development of symptoms.
- The Government of Bangladesh has set up a public health emergency control room:

- ▶ Sastha Batayan Hotline **16263**
- ▶ DGHS Hotline **333**
- ▶ Contact with Army Medical Core **01769045739**
- ▶ Crisis Management & Control Room, DGHS **01759114488**
- ▶ IEDCR **10655, 01944333222**

2. Initial Case Management

- Ill travellers with sign symptoms indicative of fever or respiratory infection, or both, who have a history of exposure to the COVID-19 should be isolated at the PoE until they are able to be transferred to a health care facility for further assessment, diagnosis and treatment.
- Take following steps during isolation period:
 - ▶ Place the traveller in well ventilated room 'Health Isolation Room' designated for COVID- 19 patients
 - ▶ If there is more than one traveller ensure 1 metre distance between them
 - ▶ Provide information to patients and their family about the need for isolation and address their concerns
 - ▶ Instruct suspected COVID-19 infected person about hand hygiene, respiratory hygiene practice
- Any traveller who is suffering from fever and sign symptom of respiratory system concerning of COVID-19, register the personal information, notify I&M Focal point and IEDCR.
- Attending health worker(s) should take appropriate measures by wearing mask and gloves and follow infection prevention and control practices

3. Referral of Ill Travellers with Suspected COVID-19

- Ambulance entering through gate 8 will wait at apron near Gate: 21 during transfer of COVID-19 suspect traveller to Isolation/Quarantine Centres
- Corridor from Screening room and airport health desk to ambulance should be cordoned

- Decontaminate screening room up to ambulance (0.5% hypochlorite solution)
- According to the provisions of the International Health Regulations (IHR-2005) and the adopted protocol for handling and reporting at the entry point HSIA in case of public health emergency like COVID-19, the national focal point for IHR should inform in written any detected COVID-19 case to WHO office in Dhaka, Bangladesh within 24 hours.
- Ground handling agent will retrieve the baggage of the traveller and /or accompanying persons, conduct surface cleaning and ensure customs check-up.
- The patient need not to stay back for baggage, but authority will ensure that the all baggage reaches to the travellers properly.
- Immigration authority will ensure clearance of all immigration formalities for an arriving sick traveller and any accompanying person/s on a priority basis in accordance to the plan in emergency and disaster.
- Nurse/Sanitary Inspector at the health desk to wear full set PPE to accompany the cases/s when ambulance arrives.
- Ambulance will arrive immediately, the driver and auxiliary staff will wear full set PPE as advised. The suspect patient will be shifted to the ambulance through a separate door with no/ minimum chance of contact with other travellers and airport staffs. The suspected case will also wear medical mask all time.
