

# EPI Surveillance Bulletin

Epidemiologic Week 17: April 18 - 24, 2004

Vol. 7 No. 4

Apr 2004

## International AFP Surveillance Review Recognizes Achievements in Polio Eradication

A high level international team of polio experts from WHO HQ in Geneva, WHO SEARO, UNICEF, CDC Atlanta, USAID, JICA and EPI experts from India, Indonesia and Sri Lanka along with national counterparts completed review of AFP Surveillance in Bangladesh from 10-20 April 2004. During this period 15 different teams visited upazilas and municipalities of 47 districts as well as all 6 city corporations and National Polio and Measles Laboratory. The team also reviewed the national level activities of EPI HQ, National Certification Committee on Polio Eradication, National Expert Review Committee and of the National Task Force on Lab Containment.

At the end of the review on 20 April 2004 a debriefing session on the review findings and recommendations was organized at a local hotel under the chairmanship of the Director General of Health Services Prof. Dr. Md. Mizanur Rahman. Honorable State Minister, MOH FW Mr. Mizanur Rahman Sinha MP was present as the chief guest.

Dr. Roland Sutter, team leader of the International AFP Surveillance Review presented the keynote paper on findings and recommendations of the review. He expressed the teams overall satisfaction about the structure, functioning and culture of AFP and EPI disease surveillance system in Bangladesh.

The review team noted that Bangladesh has not detected indigenous or imported wild polioviruses since August 2000. They

felt that the AFP surveillance system is sufficiently sensitive and expected it to detect any poliovirus transmission, including importations of wild poliovirus or the emergence of VDPVs. Therefore given the period of time since the last detection of indigenous wild poliovirus and the performance of the AFP system, the review team believes that it is highly unlikely that wild poliovirus is currently circulating in Bangladesh.

However, Dr. Sutter expressed his caution and said that given the continued wild circulation of wild poliovirus in India, the program cannot be complacent. Strengthening of the AFP surveillance system is needed to further increase confidence to detect: 1) imported wild poliovirus, 2) vaccine-derived polioviruses (VDPVs), 3) and provide a solid foundation for certification of polio-free status. Government ownership through active involvement such as funding, participation in case investigations, conducting training and orientation for EPI activities should be enhanced further at all levels.

Mr. Mizanur Rahman Sinha, Honorable State Minister, MOHFW, expressed his thanks to the members of the review team for pointing out the strengths and weaknesses of the surveillance system in Bangladesh. He said that the Government of Bangladesh is fully committed to protect the polio free status of the country and will do everything necessary to further strengthen AFP and EPI Disease Surveillance.

**Shishu Shishu Proti Shishu Khuje Fero Proti Shishu!**

## Surveillance Summary for 1998-2004 (through Epidemiologic Week 17, April 18 - 24, 2004)

	1998	1999	2000	2001	2002	2003	2004 <sup>1</sup>
Number of AFP cases	475	761	1138	1287	1365	1128	283
No. of clinically confirmed polio cases	298	322	197	NA	NA	NA	NA
No. of compatible cases according to virologic classification system	NA	NA	NA	36	0	0	0
<b>No. of cases with isolation of wild poliovirus</b>	<b>10</b>	<b>29</b>	<b>1</b>	<b>0</b>	<b>0</b>	<b>0</b>	<b>0</b>
No. of discarded polio cases (i.e., non-polio AFP)	165	439	941	1251	1365	1128	191
No. of cases pending classification	0	0	0	0	0	0	92
Expected annual number of non-polio AFP cases (1/100,000 children <15 yr)	495	505	515	533	549	556	563

## AFP Surveillance Performance Indicators:

Indicator	Target	1998	1999	2000	2001	2002	2003	2004
1. Annual Non-Polio AFP rate in children < 15 years old	≥ 1/100,000	0.33	0.87	1.82	2.34	2.49	2.03	1.33 <sup>2</sup>
2. Completeness of active reporting from hospitals	≥ 90%	46%	73%	95%	100%	100%	100%	100%
3. Timeliness of active reporting from hospitals	≥ 80%	15%	44%	72%	88%	100%	99%	100%
4. Suspected AFP cases investigated within 48 hours of notification	≥ 80%	89%	83%	93%	96%	96%	98%	96%
5. Confirmed AFP cases with 2 stool specimens collected ≤ 14 days after paralysis onset	≥ 80%	59%	49%	68%	80%	89%	90%	93%
6. Stool specimens arriving at laboratory ≤ 3 days after collection	≥ 80%	88%	81%	92%	97%	98%	99%	99%
7. Stool specimens arriving at laboratory in "good" condition "good" = 1. Presence of unmelted ice or temperature <8°C 2. Adequate volume (≥ 8 grams or size of ½ thumb) 3. No evidence of leakage 4. No evidence of desiccation (drying)	≥ 90%	92%	97%	100%	100%	99%	100%	100%
8. Confirmed AFP cases receiving a follow-up exam at least 60 days after paralysis onset	≥ 80%	80%	97%	95%	93%	99%	100%	67% <sup>3</sup>
9. Stool specimens with laboratory results ≤ 28 days after specimen receipt	≥ 80%	16%	58%	94%	99%	100%	100%	96% <sup>4</sup>
10. Stool specimens from which non-polio enterovirus (NPEV) was isolated	≥ 10%	5%	13%	21%	29%	28%	23%	19%

<sup>1</sup> Data as of Apr 24, 2004; <sup>2</sup> NPAFP rate annualized for cases according to Feb 21, 2004; <sup>3</sup> among cases with inadequate stools occurring up to Jan 24, 2004; <sup>4</sup> as of Mar 27, 2004
