

EPI Surveillance Bulletin

Epidemiologic Week 42: October 9 – 15, 2005

Vol. 8 No. 6

September 2005

The first phase of Measles Catch-up Campaign ends in a success

The first phase of Measles campaign was conducted successfully in Bogra and Rajshahi district and Rajshahi City Corporation (RCC) from 3 to 22 September 2005. In this phase 1,622 vaccinators and 15,500 volunteers were assigned to vaccinate approximately 1.5 million children in more than 10,000 sites in 3 weeks. In the 1st week about 50% of the target children were vaccinated in schools and the rest were vaccinated at routine EPI sites over the next two weeks. Administrative reports show that almost 93% of children between 9 months to 10 years were vaccinated.

This campaign has come out to be a testimony of excellent collaboration and partnership among all sectors of the society for a noble cause of saving lives of the children. Different government sectors like health, family planning, education, religious affairs, local government as well as non government organization like Red Crescent, national and local NGOs played the prime role in creating public awareness and implementation of the campaign. The contribution of the school teachers in this campaign is really praise worthy.

This campaign has some unique features. All divisional directors (Health & FP), Civil Surgeons, Deputy Directors-FP and Chief Health Officers of City Corporations from rest of the country observed the campaign for two days in batches. Representatives of National Steering Committee, senior officers from Ansar & VDP, Bangladesh Scouts, Islamic Foundation and Primary Education directorate observed the campaign. Besides this all officers from EPI HQ, Surveillance Medical Officers & Divisional Coordinators of WHO, District Immunization Medical Officers and other people from Red Crescent, NSDP, UNICEF and WHO monitored the campaign.

Moreover, 14 international observers observed school and outreach sites of the campaign in both districts. They were from WHO-SEARO, CDC, India and Maldives. They provided their feed back on the campaign and commented that this was one of the best measles campaigns ever conducted.

From the independent observers' findings, we came to know that all vaccination sites visited by them in RCC had adequate vaccine supply. In Bogra and Rajshahi, 96% of the sites had adequate vaccine supply. Adequate diluents were available in 98% sites of RCC and Rajshahi and 96% sites of Bogra. AD syringes were found adequate in 98% sites in RCC but 99% sites of both Rajshahi and Bogra had adequate AD syringe.

Adequate safety boxes were available in 91% sites of RCC, 94% sites of Bogra and 97% sites of Rajshahi. Vaccine, diluents and syringes were within date of expiry in all sites visited by the independent observers in all three places. Vaccine was stored in grey vaccine carriers in 100% sites of RCC and Rajshahi but in 96% sites of Bogra. Diluents were found wrapped in thick paper in 91% sites of RCC, 79% sites of Bogra and 77% sites of Rajshahi. Ice packs were properly handled in 95% sites of RCC, 93% sites of Rajshahi and 91% sites of Bogra. Reconstituted vials were kept properly in 100% sites of RCC, 98% sites of Rajshahi and 96% sites of Bogra.

Vaccine was administered through subcutaneous route in only 92% sites of RCC but in 98% sites of Rajshahi and 99% sites of Bogra. Mosque or other miking was used in only 66% sites of RCC, 86% sites of Rajshahi and 82% sites of Bogra.

Independent Observers' Rapid Convenience Assessment (RCA) findings reveal that 70% areas visited by them had at least 90% coverage. A total of 119 areas were assessed and 20 children were surveyed in each area. A total of 120 AEFI cases were reported during campaign. Traveling (38%) was found to be the major cause of non vaccination during the campaign followed by unawareness about the campaign (18%). Field workers visit (31%) was the main source of information about the campaign followed by mosque miking (15%) and mobile miking (13%).

The 1st phase is over now, the strengths and the weaknesses of this phase are known. We need to do more to make the second phase successful based on the experience of the 1st phase.

Surveillance Summary for 1999-2005 (through Epidemiologic Week 42, October 9-15, 2005)

	1999	2000	2001	2002	2003	2004	2005 ¹
Number of AFP cases	761	1138	1287	1365	1128	1301	1184
No. of clinically confirmed polio cases	322	197	NA	NA	NA	NA	NA
No. of compatible cases according to virologic classification system	NA	NA	36	0	0	2	0
No. of cases with isolation of wild poliovirus	29	1	0	0	0	0	0
No. of discarded polio cases (i.e., non-polio AFP)	439	941	1251	1365	1128	1299	1097
No. of cases pending classification	0	0	0	0	0	0	87
Expected annual number of non-polio AFP cases (2/100,000 children <15 yr)*	505	515	533	549	556	563	1094

AFP Surveillance Performance Indicators:

Indicator	Target	1999	2000	2001	2002	2003	2004	2005
1. Annual Non-Polio AFP rate in children < 15 years old	≥ 2.0	0.87	1.82	2.34	2.49	2.03	2.31	2.71 ²
2. Completeness of passive reporting from facilities	≥ 90%	66%	83%	65%	62%	67%	82%	90%
3. Timeliness of passive reporting from facilities	≥ 80%	30%	58%	38%	36%	62%	75%	82%
4. Suspected AFP cases investigated within 48 hours of notification	≥ 80%	83%	93%	96%	96%	98%	98%	99%
5. Confirmed AFP cases with 2 stool specimens collected ≤ 14 days after paralysis onset	≥ 80%	49%	68%	80%	89%	90%	90%	92%
6. Stool specimens arriving at laboratory ≤ 3 days after collection	≥ 80%	81%	92%	97%	98%	99%	99%	99%
7. Stool specimens arriving at laboratory in "good" condition "good" = 1. Presence of unmelted ice or temperature <8°C 2. Adequate volume (≥ 8 grams or size of ½ thumb) 3. No evidence of leakage 4. No evidence of desiccation (drying)	≥ 90%	97%	100%	100%	99%	100%	100%	100%
8. Confirmed AFP cases receiving a follow-up exam at least 60 days after paralysis onset	≥ 80%	97%	95%	93%	99%	100%	98%	96% ³
9. Stool specimens with laboratory results ≤ 28 days after specimen receipt	≥ 80%	58%	94%	99%	100%	100%	100%	99% ⁴
10. Stool specimens from which non-polio enterovirus (NPEV) was isolated	≥ 10%	13%	21%	29%	28%	23%	20%	21%

¹ Data as of Oct 15, 2005; ² NPAFP rate annualized for cases according to Aug 13, 2005; ³ among cases occurring up to Aug 1, 2005; ⁴ as of Sep 17, 2005; * Prior to 2005 NPAFP rate calculated as 1/100,000 children
