

Light Engineering **BANGLADESH**

Light Engineering sector is one of the elementary sub-sector in Bangladesh in terms of its involvement to socio economic growth and poverty reduction. LEI sector has been playing an important role in the economy of Bangladesh. LEI sector is frequently referred to as a mother industry that supports all other industries by providing machinery, equipment's, spare parts, accessories, and import substitute items (Quadir & Mahamud, 2009). But the movement of LEI sector is very insignificant in Bangladesh.
