

Gas and Coal Reserve & Production

September 2025

Prepared by

ENERGY DATA CENTER

Hydrocarbon Unit

Executive Summary

The energy sector plays a pivotal role in sustaining economic growth and industrial development in Bangladesh. Among the primary sources of indigenous energy, natural gas and coal continue to contribute significantly to the national energy mix. Total gas and condensate Production in September 2025 were 53.51 Bcf and 204885.71 Bbl. During the previous month i.e. August 2025, gas and condensate production were 54.94 Bcf and 212312.86 Bbl.

Table 1: Monthly Comparison

Item	Month	
	August-25	September-25
Gas (Bcf)	54.94	53.51
Condensate (Bbl)	212312.86	204885.71

Noteworthy, in September 2024, total gas and condensate production were 60.15 Bcf and 230419.55 Bbl respectively.

Table 2; Yearly Comparison

Item	Month	
	September-24	September-25
Gas (Bcf)	60.15	53.51
Condensate (Bbl)	230419.55	204885.71

21.19 Bcf and 32.32 Bcf gas respectively in September 2025. During the previous month i.e. August 2025, gas production by the NOCs and IOCs were 21.45 Bcf and 33.49 Bcf respectively.

In the month of September 2025, Bibiyana gas field Produced 26.76 Bcf gas and it ranked top among the gas producers. Average production from the field during the month of September 2025 was 892.10 MMcfd. It is noted that Bibiyana gas field Produced 27.83 Bcf in August 2025.

Bibiyana gas field Produced 148962.65 Bbl condensate and ranked top while Jalalabad ranked 2nd by producing 22734.86 Bbl condensate.

Total LNG import in September 2025 was 30.56 Bcf. As a result, total LNG Import in this FY is 93.17 Bcf and cumulative LNG import stands out 1,601.48 Bcf from August 2018.

In the month of September 2025, total coal production is 96,828.86 Ton. During the previous month, i.e., August 2025 total coal production was 75,800.87 Ton.

The National Oil Companies (NOCs) and International Oil Companies (IOCs) produced

No. of IOCs gas production well in September 2025	:	42
No. of NOCs suspended well in September 2025	:	45
No. of IOCs suspended well in September 2025	:	18
Total LNG Import in September 2025	:	30.56 Bcf
Total LNG Import from September 2025	:	93.17 Bcf
Cumulative LNG Import from August 2018	:	1,601.48 Bcf

Introduction

In light of increasing demand, depleting reserves, and global energy transition dynamics, it is essential to closely monitor the status of domestic gas and coal resources. The data and analyses presented herein aim to support informed decision-making for energy planning, policy formulation, and investment prioritization. By capturing month-wise trends, the report also highlights variations in production efficiency, reserve depletion rates, and the urgency for exploration and diversification.

In the face of ongoing challenges and future energy security concerns, this report serves as a critical tool for stakeholders including government agencies, energy companies, researchers, and policymakers. It underscores the importance of strategic resource management to ensure sustainable and reliable energy supply for Bangladesh's future.

Table 4: Summary of Gas Reserve, Production & Import

Gas Initially in Place (Proven + Probable) *	40,092.19	Bcf	40.09	Tcf
Recoverable Reserve (Proven + Probable) *	29,926.50	Bcf	29.93	Tcf
Gas Production in September 2025	53.51	Bcf	0.05	Tcf
Cumulative Gas Production as of September 2025	21,934.13	Bcf	21.93	Tcf
Remaining Reserve	7,992.37	Bcf	7.99	Tcf

** Estimates of gas reserves based on "Updated Report on Bangladesh Gas Reserve Estimation 2010", prepared by Gustavson Associates LLC, USA.*

As of September 2025, 73% of Bangladesh's recoverable gas reserves have already been extracted, leaving 7.99 Tcf (27%) available for future use. With declining output from several fields and limited new discoveries, this data signals a growing pressure on domestic gas supply. Immediate strategic actions are necessary to manage the remaining reserves efficiently, accelerate exploration, and diversify energy sources to maintain energy security.

Table 5: LNG import scenario

Total LNG Import in September 2025	30.56	Bcf
Total LNG Import in this FY	93.17	Bcf
Cumulative LNG Import from August 2018	1,601.48	Bcf

Since the beginning of LNG imports in 2018, Bangladesh has brought in over 1.60 Tcf of Liquefied natural gas to supplement its domestic supply. In the current fiscal year alone, LNG imports account for a significant portion of total gas availability. The consistent rise in LNG reliance reflects the country's strategy to offset declining domestic production, underscoring the need for long-term LNG sourcing plans, price risk management, and infrastructure expansion to ensure sustained energy security.

Table 6: Gas field wise Summary of Reserve and Production (in Bcf)

Sl No.	Field	2P GIIP	2P Reserve	Gas Prod. In September 25	Cum. Gas Production	Remaining Reserve	Cum. Condensate Production
1	Begumganj	47.0	33.0	0.35	19.4	13.6	5

Figure 2: Reserve, Production and Remaining Reserve as of September 2025

As of September 2025, Bangladesh’s gas production data shows sign of strain, with several key fields nearing depletion. While fields like Titas, Rashidpur, and Kailas Tila still hold significant remaining reserves (each over 2000 bcf), others such as Habiganj, Srikail, and Begumganj are almost exhausted.

Notably, although Bibiyana and Jalalabad show zero remaining reserve in the current dataset, these fields are not fully depleted in reality, and their reserve figures likely require updating or reassessment. The data indicates a need for more accurate reserve evaluation, better production planning, and targeted development in underutilized but resource-rich fields. To ensure energy security, Bangladesh must prioritize exploration, reserve reassessment, and LNG import strategies alongside optimizing existing gas field output.

The chart shows a gradual decline in average daily gas production in Bangladesh from 2017 to 2025. Peak production occurred between 2018 and 2020, consistently averaging above 2,600 mmscfd. A noticeable drop began in 2021, with further decline in 2023 and 2024, where production mostly stayed between 2,000–2,200 mmscfd. The lowest point was observed in September 2020, likely due to the pandemic.

The early data for 2025 continues the downward trend, indicating the impact of maturing fields and limited new developments. The trend underlines the urgency for reserve

Figure 3: Daily Average Production (from January 2017 to September 2025)

replenishment, improved production management, and alternative energy sourcing.

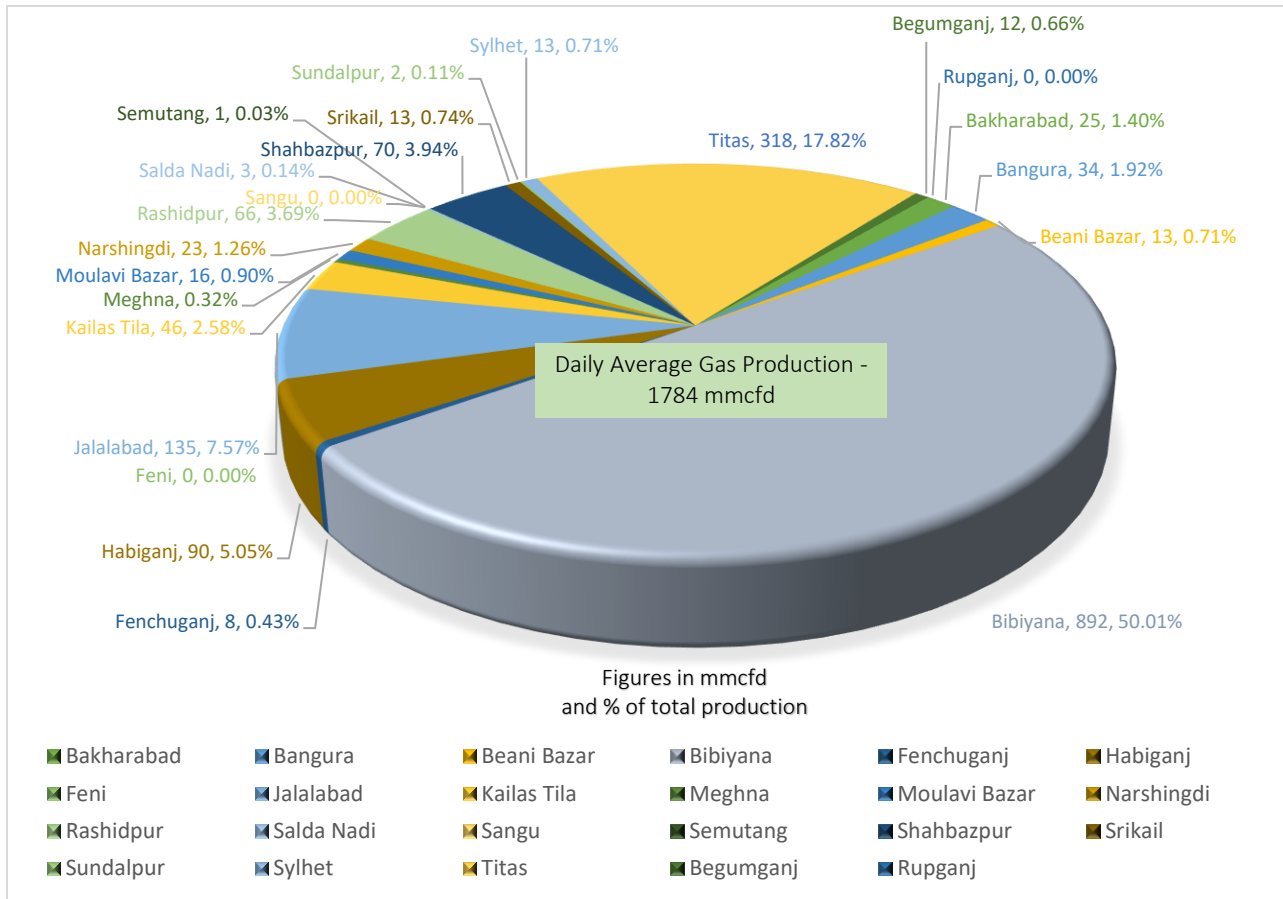

Figure 4: Field Wise Daily Average production September 2025

The pie chart titled "Field Wise Daily Average Production - September 2025" illustrates the natural gas production (in mmcf) and percentage contribution from various fields in Bangladesh. The total daily average production is 1784 mmcf.

Key points:

- Bibiyana is the largest contributor, producing 892 mmcf (50.01%) of the total.
- Titas follows with 318 mmcf (17.82%), and Jalalabad with 135 mmcf (7.57%).
- Other notable contributors include Habiganj (90 mmcf), Rashidpur 66 and Shahbazpur 70 mmcf respectively.
- Several fields like Sangu, Feni, and Rupganj report zero production.

than 1% individually.

- Many smaller fields contribute less

This distribution shows a heavy reliance on a few major fields, particularly Bibiyana, for national gas production.

Figure 5: Well-wise Daily Avg. Production of Bangladesh Gas Fields Co. Ltd. (BGFCL)

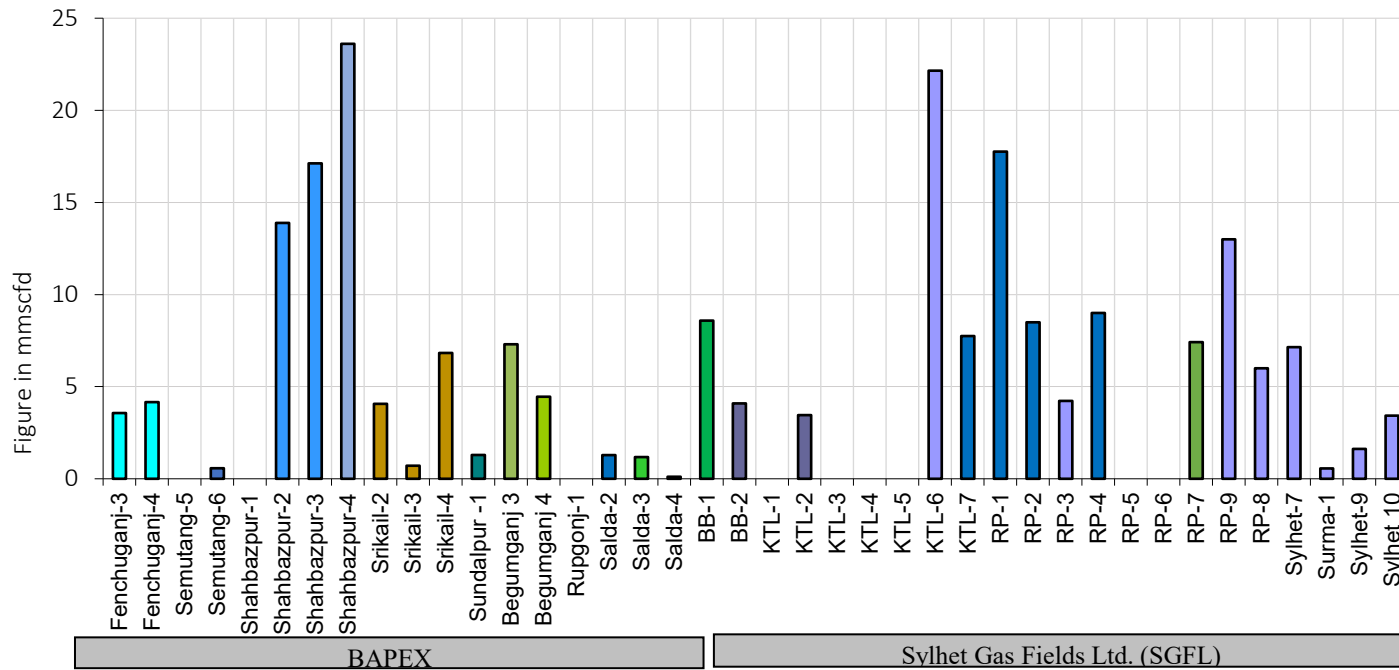

The bar chart illustrates the well-wise daily average gas production for BGFCL in September 2025, across three major fields: Bakhrabad, Habiganj, and Titas.

Titas Gas Field shows the highest overall production, with several wells producing between 15–30 mmscfd, and Titas-26 being one of the top producers.

Habiganj Gas Field displays varied production, with HB-7 producing the most (nearly 39 mmscfd), making it the highest individual producing well in the chart.

Bakhrabad Gas Field has relatively low-producing wells, most yielding below 5 mmscfd. The chart highlights the significant role of Titas and key wells like HB-7 in BGFCL's overall gas output.

The chart shows well-wise daily average gas production for BAPEX and Sylhet Gas Fields Ltd. (SGFL) in September 2025.

Key Observations:

BAPEX:

- Shahbazpur-4 is the top producer among BAPEX wells, producing about 24 mmscfd. Other significant wells include Shahbazpur-2, 3, Begumganj-3 and Srikail-4.

- Several wells, such as Semutang-6 and Salda-2, show very low or negligible output.

SGFL:

- Kailas Tila-6 is the highest producer among SGFL wells, producing above 22 mmscfd.
- Rashidpur wells (especially RP-1 and RP-9) also show moderate to high production.
- Overall, Shahbazpur-4 (BAPEX) and Kailas Tila-6 (SGFL) are the leading individual well producers in this chart.

Figure 6: Well-wise Daily Avg. Production- BAPEX and SGFL September 2025

Figure 7: Well-wise Daily Average Production- IOC and JVA September 2025

- Sangu is abandoned and Moulovibazar wells show minimal production.
- Overall, Bibiyana stands out as the top-producing field, with consistent and high output across its wells.

This bar chart presents well-wise daily average gas production from various fields—including Bangura, Bibiyana, Chevron-Operated Fields, Jalalabad, Moulavi Bazar, and Sangu—for September 2025.

Key Highlights:

- Bibiyana shows the highest overall production, with several wells producing between 40–60 mmscfd, making it the dominant contributor.
- Chevron-operated fields, including Jalalabad and Moulavi Bazar, also have strong outputs, with most wells producing in the 20–35 mmscfd range.
- Bangura wells produce moderately, mostly ranging between 5–10 mmscfd.

Figure 8: Comparison of field-wise daily avg. Gas production between August 2025 & September 2025

consistent between the two months, with Bibiyana and Titas being the main contributors to the national supply.

This bar chart compares the monthly average gas production by field for August 2025 and September 2025, measured in mmcfd.

- Bibiyana remains the highest producing field in both months, with production close to 892 mmcfd, showing a slight decrease in September.
- Titas is the second-largest contributor, maintaining steady output around 318 mmcfd.
- Other notable fields like Jalalabad, Habiganj, and Rashidpur show relatively stable production levels.
- Most fields show only minor changes between August and September.
- The chart indicates that gas production levels remained largely consistent between the two months.

Figure 9: Daily Average Production by Operators

This bar chart shows company-wise daily average gas production in mmcf for September 2025.

Key Insights:

- Chevron is the highest gas producer, contributing 1043 mmcf, which dominates the national production.
- BGFCL (Bangladesh Gas Fields Co. Ltd.) is the second-highest, with 461 mmcf.
- SGFL (Sylhet Gas Fields Ltd.) produces 137 mmcf, and BAPEX contributes 108 mmcf.
- Tullow contributes a small amount at 34 mmcf.
- Chevron leads by a wide margin, followed by state-run companies like BGFCL and SGFL. Some international companies like Santos and Niko are currently non-operational or inactive in production.

Figure 10: Comparison of operator-wise daily avg. Gas production between August 2025 & September 2025

This bar chart compares operator-wise daily average gas production between August 2025 and September 2025, measured in mmcfd.

Key Highlights:

- Chevron remains the highest producer in both months, maintaining a strong output under 1,043 mmcfd, with a slight decrease in September.
- BGFCL shows a marginal increase, from around 454 mmcfd in August to approximately 461 mmcfd in September.
- SGFL and BAPEX have steady production around 137 mmcfd and 108 mmcfd respectively.
- Tullow maintains low production near 35 mmcfd in both months.
- Overall gas production trends remain stable, with Chevron contributing the most. Minor decreases in production are noted for BGFCL and Chevron in September. State-run companies continue to play a key supporting role in the sector.

Figure 11: Daily Avg. Production - National Vs. IOCs

This chart presents a comparison of daily average gas production between National Companies and International Oil Companies (IOCs) for September 2025.

Key Details:

National Companies produced 706 mmcfd.

IOCs significantly outproduced, with 1077 mmcfd.

In September 2025, IOCs contributed around 60% of the total gas production, while National Companies produced 40%. This highlights the continuing dominant role of IOCs in Bangladesh's gas sector, though national entities remain key contributors.

Figure 12: Comparison of daily avg. Gas production - National vs IOC's between August 2025 & September 2025

This chart compares daily average gas production by National companies vs International Oil Companies (IOCs) for August and September 2025.

- National production saw a slight increase but IOC production a slight decrease in September compared to August.
- IOCs continue to be the dominant producers, contributing over 60% of total output in both months.
- The overall change is modest, indicating relatively stable production levels.

Figure 13: Daily Avg. Production - IOC and JVA September 2025

In September 2025, among the International Oil Companies (IOCs) Chevron’s Bibiyana field recorded the highest daily average gas production at 892 mmcf, making it the largest single contributor. Jalalabad produced 135 mmcf, and Moulavi Bazar contributed 16 mmcf, both also operated by Chevron.

Other fields under different operators showed minimal or no production: Bangura (Tullow) produced 34 mmcf, while Sangu (Santos) and Feni (NIKO-BAPEX) recorded zero output.

The data reflects heavy reliance on Bibiyana for supply, emphasizing the need to diversify production sources and enhance output from underperforming fields.

Figure 14: Monthly Condensate Production September 2025

In September 2025, Bibiyana was by far the largest producer of condensate, generating 148963 barrels, accounting for most of the national output. The second-highest producer was Jalalabad with 22735 barrels. Several fields produced smaller volumes ranging between a few hundred to just over 1,500 barrels. Some fields, such as Fenchuganj and Begumganj, showed very low output, while others like Sangu and Feni produced none. The data reflects a high concentration of condensate production at Bibiyana, underscoring its strategic importance in Bangladesh’s liquid hydrocarbon output.

Coal Resources in Bangladesh

Table 8: Field wise Coal Reserves in Bangladesh

Sl. No.	Coal field	Depth of Coal Seam (m)	Coal Resources and Reserves (Million Tons)			Total (Mt)	Remarks
			Proved	Indicated	Inferred		
1	Barapukuria	118–509	114.32	211.33	21.06 + (43–64)*	346.71 + (43–64)*	*Reserve of sixth seam in the 2nd syncline area (Wardell Armstrong)
2	Phulbari	150–270	288.00	244.00	40.00	572.00	
3	Khalashpir	239–485	–	297.57	225.92	523.49	
4	Jamalganj	640–1158	–	–	1053.90	1053.49	M/s. Krupp opined proven reserve, but PwC termed it Inferred according to the UNFC (United Nations Framework Classification for Resources)
5	Dighipara	320–506	462.00	244.00	–	706.00	TEFS Report of Dighipara
	Total		864.32 (26.46%)	996.9 (30.52%)	1383.88–1404.88 (43.02%)	3245.10–3266.10 (100%)	

Coal Sector Development Strategy 2013 (PwC – HCU)

As of the latest assessment, Bangladesh holds substantial coal resources across five major basins, totaling an estimated 3245.10-3266.10 million tons (Mt).

- Barapukuria has the most well-defined reserves, with 114.32 Mt proved, 211.33 Mt indicated, and an inferred range of 21.06 + (43–64) Mt, totaling 346.71 + (43–64) Mt.
- Phulbari is the richest single basin in terms of total reserves, with a combined 572 Mt across all categories.
- Khalashpir and Dighipara also hold large inferred reserves, with totals of 523.49 Mt and 706 Mt, respectively, though Khalashpir doesn't have any proved reserves.
- Jamalganj contains the highest volume of inferred coal, at 1,053.9 Mt, but lacks any proved or indicated data.

Overall, while Bangladesh has significant coal potential, the bulk of it remains in the inferred category, indicating the need for further exploration and feasibility studies to upgrade reserve confidence and determine commercial viability.

Table 9: Summary of Reserve and Production of Barapukuria Coal Mine

Coal Initially Place (Proven + Probable)	346,710	kT
Total Reserve of Seam VI	285,410	kT
Recoverable from Seam VI Central part (Proven + Probable)	16,540	kT*
Coal Production in September 2025	96.83	kT
Cumulative Production as of September 2025	15,497	kT
Remaining Reserve	1,043	kT

NOTE: Reserve figure based on Mines and Minerals Development Report, HCU PwC

*Data source: BCMCL, M/S Wardell Armstrong. According to Mines and Minerals Development Report, HCU, PwC this figure is 64.8 Mt

The data shows that over 91% of the recoverable reserve from Seam VI’s central part has already been extracted. With only 1.04 MT remaining, coal production from this segment is approaching exhaustion. This highlights the urgency for reserve reassessment, expansion feasibility, or the development of alternative coal zones.

Figure 15: Barapukuria Coal Mine Daywise Data Graph for September 2025

Key Observations

Production ranged from ~3000 tons to over 4200 tons during the month. A significant increase is observed from 3rd September onward, with production mostly staying above 3000 tons/day. Peak production was recorded on 10th September, exceeding 4252 tons. The overall trend shows a steady rise in production across the month.

Conclusion

The analysis of gas and coal reserves and production for September 2025 underscores both the strategic importance and the growing vulnerability of Bangladesh's indigenous energy resources. While fields like Titas, Rashidpur, and Bibiyana continue to contribute significantly to gas production, the declining output from other major fields—alongside the nearing depletion of several reserves—indicates a narrowing domestic energy supply margin. Similarly, coal reserves, though sizable in total, remain largely underexplored or technically constrained, with critical areas like Barapukuria's Seam VI approaching exhaustion.

This report highlights the urgent need for a dual approach: **enhanced recovery and optimized utilization** of current reserves, coupled with **accelerated exploration and development** of new fields. Additionally, accurate and updated reserve data, particularly for high-output zones like Bibiyana and Jalalabad, will be essential for effective resource planning.

To ensure long-term energy security and economic resilience, Bangladesh must prioritize investment in exploration, upgrade production infrastructure, and pursue complementary solutions such as clean energy diversification. The insights presented here aim to support timely and informed decisions in national energy policy and resource management.
