

BECOME A TRAINED EPIDEMIOLOGIST!
Field Epidemiology Training Program - Intermediate
(A Certificate Course in Applied Epidemiology)
INSTITUTE OF EPIDEMIOLOGY, DISEASE CONTROL AND RESEARCH (IEDCR)
Mohakhali, Dhaka-1212

Website: www.iedcr.gov.bd, Email: info@iedcr.gov.bd

[Field Epidemiology Training Program-intermediate](#) is a United States Centers for Disease Control and Prevention (US CDC) designed unique 12 months on job training opportunity for government physicians of Bangladesh, technically supported by Eastern Mediterranean Public Health Network (EMPHNET), Jordan and hosted by the Institute of Epidemiology, Disease Control & Research (IEDCR) of the Ministry of Health and Family Welfare.

Background and Objectives

FETP-Intermediate program is a twelve-month in-service training that addresses the skills needed by the Government health officials to improve epidemiologic capacity to evaluate and strengthen public health surveillance systems, investigate and control outbreaks, conduct field studies to address public health priority issues and Public Health leadership and management. The goal of the Intermediate FETPB is to strengthen the applied epidemiological skills of government health officials and produce the health leaders of the future.

The training consists six contact sessions with a total of 9 weeks divided over six different periods in 12 months (see attachment). Through mentor supervised in-service training, participants learn and practice fundamental skills used in surveillance, outbreak investigation and public health leadership and management. The fieldwork is planned to be at the participants' job stations where they conduct their field projects to practice, implement, and reinforce what they have learned.

FETP-Intermediate program is implemented in 13 countries around the world, graduates count toward WHO/GHSA goal of 1 epidemiologist per 200,000 populations. Many graduates obtain high-level leadership positions within the health system and health programs under health ministries.

Training

Classroom: Courses in Epidemiology, Biostatistics, Disease Surveillance, Outbreak Investigation, Scientific Writing/Communications, and public health leadership/management (see attachment).

Field: Conduct outbreak investigations, surveillance system evaluations and data analyses, disease control and prevention, research, reporting to decision-makers, writing scientific abstract/manuscripts and public health leadership/management.
