

# **Knowledge Management for Digital Bangladesh: An Overview**

**M. A. Kamal**

**Abstract** - In this paper, attempt was made to address the issues of technology, education, and information revolution in the context of visualizing a digital Bangladesh. Knowledge management or knowledge engineering is geared towards economic benefits. Knowledge economy can be developed through the gradual use of science and technology. Knowledge is being transformed into relevant fields of technology, bio-technology, agricultural technology and information technology for a better performance. The ICT sector is recognized as the thrust sector for action research and development in order to expedite economic growth. The insufficient opportunity for ICT education and skill based training is a major barrier to knowledge management. The development of science and technology and the ICT sectors will act as the key factors for changing the economic dimensions of the country. Bangladesh, a committed digital democracy, is in the process of enhancing citizen participation for a better future.
