Tidal Predictions for Rabnabad Channel

**With Moon Phase
1st January – 31 December 2025**

Tidal predictions for Rabnabad Channel are calculated by the Hydrography Department, Payra Port Authority. Daily tide level was recorded by auto tide gauge installed at Kauar Char, Charipara, Andermanik, Monopile-1 and Monopile-2. 'Geo Tide Analyzer and Predictor' software was used to calculate the predicted tide levels and time.

Tidal heights refer to zero on the Tide Gauge, being approximately the level of the Lowest Astronomical Tide. Times are in local standard time (UTC +06:00). Tide heights are quoted in meters.

Users of these tables should be aware that the heights shown in this publication are predictions for average meteorological conditions only and that the actual water level height may vary due to meteorological conditions (including barometric pressure, wind effect and storm surges) and seasonal variations.

IMTIAZ UDDIN MOHAMMAD SABIR
Commander BN
Chief Hydrographer
Payra Port Authority

TIDE LEVELS

Highest Astronomical Tide (HAT) and Lowest Astronomical Tide (LAT)

This is the highest and lowest level respectively, which can be predicted to occur under average meteorological conditions and under any combination of astronomical conditions. These levels will not be reached every year. HAT and LAT are not the extreme levels which can be reached, as storm surges may cause considerably higher and lower levels to occur.

Mean High Water Spring (MHWS) and Mean Low Water Spring (MLWS)

The height of MHWS and MLWS is the average of the heights of two successive high waters and low waters respectively during those periods of 24 hours (approximately every fortnight) when the range of the tide is greatest.

Mean High Water Neap (MHWN) and Mean Low Water Neap (MLWN)

The height of MHWN and MLWN is the average throughout the year, as above, of the heights of two successive high waters and low waters respectively during those periods (approximately every fortnight) when the range of the tide is least.

Mean Tide Level (MTL)

Mean Tide Level is the mean of the heights of MHWS, MHMW, MLWS and MLWN.

Mean Sea Level (MSL)

Mean Sea Level is the average level of the sea surface over a Long period, preferably 18.6 years, or the average level which would exist in the absence of tides.

METEOROLOGICAL EFFECTS ON TIDE

Meteorological conditions which differ from the average will cause corresponding differences between the predicted and the actual tide. Variations in tidal heights are mainly caused by strong or prolonged winds and by unusually high or low barometric pressure. Differences between predicted and actual times of high and low water are caused mainly by wind.

Barometric Pressure

Tidal predictions are computed for average barometric pressure. A difference from the average of 34 millibars can cause a difference in height of about 0.3 meter. A low barometer will tend to raise sea level and a high barometer will tend to depress it. The water level does not, however, adjust itself immediately to a change of pressure and it responds, moreover, to the average change in pressure over a considerable area. Changes in level due to barometric pressure seldom exceed 0.3 meter but, when MSL is raised or lowered by strong winds or by storm surges, this effect can be important.

Effect of Wind

The effect of wind on sea level and therefore on tidal heights and times is very variable and depends largely on the topography of the area. In general, it can be said that wind will raise sea level in the direction towards which it is blowing. A strong wind blowing straight onshore will pile up the water and cause high waters to be higher than predicted, while winds blowing off the land will have the reverse effect. Winds blowing along the coast tend to set up Long waves which travel along the coast, raising sea level where the crest of the wave appears and lowering sea level in the trough. These waves are known as storm surges.

POSITIONS OF PPA TIDE GAUGES

Name of Place		Position
Charipara	21°57'05"N	90°18'02"E
Kauar Char	21°49'58"N	90°15'18"E
Monopile-1	21°37'17"N	90°12'29"E
Monopile-2	21°27'28"N	90°07'35"E

PHASES OF THE MOON 2025

PHASES OF THE MOON FOR 2025

The following list gives the times of the phases of the moon for 2025. The predictions are accurate to about one minute, and are given in south African Standard Time.
